PREFACE.

By reference to the Transactions of the Medical and Chirurgical Faculty for the year 1898, p. 63, it will be seen that the preparation of the following volume formed part of the plan then adopted for the due celebration and commemoration of the Centennial of the Faculty. The title selected for the work was "The Medical Annals of Maryland," and as Dr. John R. Quinan had made extensive investigations in the same field, his book was taken as the basis for the present volume. The extensive MS. additions made by him for the proposed second edition of his work, "The Medical Annals of Baltimore," were fortunately available and were turned over to the writer, who was selected to prepare the enlarged "Annals." In the original plan, it was intended to have the proceedings of the centennial meeting included in this work, but owing to the unfinished condition of the latter at the time of the publication of the Transactions of the centennial year, and the delay such an arrangement would have caused in the appearance of the Transactions, this proved to be impossible. By reference to the following pages, however, it will be seen that a very full synopsis of the proceedings of the centennial meeting is given, including copious abstracts of all the addresses made upon that memorable occasion.

The plan of this work embraces three divisions: (1) An historical section, (2) a biographical section, (3) a chronological section. The first deals with the annals of the Society during

Explan: See Pedro Commission. 1898-1905

PREFACE

its century of existence, with some notice of earlier efforts at organization in the State. The second includes all who have, at any time so far as the records show, been members of the Society—about 2400 in all. During the first forty years of its existence the law required all physicians practicing in the State to obtain the license of the Faculty, hence the membership during that period included practically the entire profession of the State. Information for this section has been sought in a thousand sources, and an extensive correspondence has been carried on with every section of the State, and even beyond it, for the past five years. Notwithstanding these persistent and protracted efforts, many names, as will be seen, appear with no additions. This paucity of information is particularly to be deplored regarding many of the 101 founders, not only because of their peculiar relations to the Society, but because of their high standing in the State, as they were chosen on account of their prominence and representative character.

In the third part extensive use has been made of Quinan's chronology, such additions being made to it as to bring it down to the centennial year. And here the writer would take occasion to make acknowledgment of the value and extent of the historical researches of the late Dr. John R. Quinan, whose unrequited labors, extending over so many years, have become the valued inheritance of us, his successors.

To the Committee in charge of this volume, Drs. Osler, Friedenwald, Ashby, Hurd and Preston, the writer desires to express his thanks for their cordial coöperation and generous support. To the many, both within and without the profession, who have assisted with the biographical section, he is under the deepest obligations. Especial thanks are due to Dr. Henry M. Hurd, who throughout the preparation of the volume, has con-

PREFACE

tributed his valuable time and advice in the most generous manner.

And now the author leaves his work for the perusal and final judgment of his medical colleagues and of posterity. He has striven to produce a volume which will, for all time to come, be regarded as authoritative in all matters relating to the medical history of the State. He cannot, of course, expect in such a work to have avoided error, nor does he expect to escape criticism. Whatever the judgment be, however, regarding the merits of the volume, he can claim this, that he has endeavored to be strictly impartial and to state only the truth.

In conclusion, the author would recall this interesting aspect of his work: that it will form a medium between us who are now living and breathing and inheriting the land, and all the future generations of Maryland physicians. For in these pages we shall live again with them, and they, as they read, will feel our heart throbs and sympathize with our feelings, our hopes, our aspirations, long after we have returned to our mother earth, and our last resting place be forgotten. And

“So shall we glide down to the sea
Of fathomless eternity.”

THE MEDICAL ANNALS OF MARYLAND

PREPARED FOR

THE MEDICAL AND CHIRURGICAL FACULTY
OF MARYLAND

HISTORY.

The principle of coöperation is as old as human history. In all ages of the world men, engaged in the same objects and pursuits, have united together for purposes of mutual advantage or protection. It is in modern times, however, that the imperative claims of the principle have been especially recognized and its practice enforced; so that in every field of human effort and industry the individual worker is considered but a fraction of a grand whole, representing, in some way, the influence, the interest and the activity of each of its several, often multitudinous, components. In no department is union productive of more important and varied results than in that to which we belong. For whilst in the case of others the objects sought are almost exclusively selfish, relating almost solely to the narrow field in which they themselves operate, *we* are equally—indeed, I may truthfully say, *most*—concerned with the good of others. The protection of the health and lives of our *fellow-men* is our greatest concern. In seeking to subserve that purpose, we are continually going counter to

MEDICAL AND CHIRURGICAL FACULTY

our own interests. We must always find our living in disease and suffering, and yet it is our continual object and effort to eradicate these from existence. Instead of welcoming them as our friends and allies, we are striving with all our faculties and energies to limit their operation. We pursue disease to its favorite haunts, its most secret recesses; with disregard of ourselves, we investigate its causes, we study their mode of origin, their development and their avenues of distribution and transmission, and we seek out, with infinite care and labor, the agents best adapted for destroying them and limiting their operation. As prevention is better, more easily secured and more certain than cure, our efforts are increasingly directed to that, and in no respect does modern medicine contrast so strongly with that of former times as in the marvelous progress made in this field. It is especially in that large class of affections known as infectious, and so often prevailing in epidemic form, that the beneficent powers of the physician are seen. To prevent these, and to limit their activity when present, constitute the highest aims of our greatest intellects. What we have accomplished in this direction, and also in the actual cure of disease, is well known to ourselves, at least, if not so well known and appreciated by the public at large. Diseases which once ravaged the world have almost ceased to exist, others have been shorn of their powers or brought under our control. Nor are these the only ways in which we have established our claims to the gratitude of mankind. We have pointed out better methods of living, we have taught correct principles of diet, clothing, exercise, etc., so that the human system is better prepared to resist and endure disease, and the term of human life has been prolonged. Far be it from me to belittle the work of individual physicians or to claim that these advances have been due solely to combined efforts.

MEDICAL AND CHIRURGICAL FACULTY

Nevertheless, I would claim that individual effort cannot cover so wide a field and that organization is necessary that we may meet and overcome the difficulties in our path. Indeed, there are those who think that we must rely for progress in the future upon societies and institutions, or aggregations of these—upon collective investigation, in other words.

Although the advantages to be expected from association must have been always more or less obvious, the early physicians of this country seem to have been slow to appreciate them. Prior to the Revolution, in but one of the Thirteen Colonies had a medical society been founded, and although Maryland was one of the oldest of them, it was only seventh in point of time in being thus represented.

According to Dr. J. S. Billings, "A Century of American Medicine," *Am. J. Med. Sc.*, Oct., 1876, the following was the order of foundation: New Jersey, 1766; Massachusetts, 1781; Delaware and South Carolina, 1789; New Hampshire, 1791; Connecticut, 1792; Maryland, 1799. The College of Physicians of Philadelphia was instituted in 1787. All of the above are still in existence, except the South Carolina Medical Society.

Of national professional feeling among the physicians of the Colonies there seems to have been none, and it was not until nearly three-quarters of a century after the Declaration of Independence that an association representing the country at large was instituted.

In the theory of our government the state, following the colony, was the unit, and it was not until after the Civil War of 1861-65 that "the doctrine of State's rights" was assigned to an entirely subordinate place in our national politics. The first national association, "The American Medical Association," held its *first* meeting in this city in 1848.

MEDICAL AND CHIRURGICAL FACULTY

There was but one attempt at medical organization in Maryland prior to the founding of the Medical and Chirurgical Faculty. It is not unlikely, however, that the physicians in different parts of the State had occasionally met for business or social purposes. The infrequency of records of such events may well be attributed to the thinly settled country, and especially to the absence of large centres of population such as were found further to the North. The following notice indicates a coöperation upon the subject of fees:

"The Practitioners of Physic in this Town, think it proper to inform the public, that from the fluctuation of prices and unfixt value of money, they find it necessary to charge for their services, in country produce, or by way of barter or in money at such advance as will bear a proportion to the prices of the necessaries of life at the time of payment. It must be confessed that the gentlemen of the Faculty in this Town have suffered more in respect to their bills since the commencement of the present war than any other class of men in the community—the equity, therefore, of the above regulation will appear self-evident to every unprejudiced person. The indigent sick may nevertheless apply and they shall be attended to as usual with tenderness and charity.—Ch. Wiesenthal, S. S. Coale, M. Haslett, F. Ridgely, John Boyd, W. Beard, Th. Andrews, John Lebesius." (*Md. J. & Balt. Advr.*, Nov. 30, 1779.)

See also "Letter to the Inhabitants of Baltimore," *id.*, June 22, 1790, in which Dr. George Buchanan suggests a registration of deaths, the formation of a public park, and the organization of "a humane society," and "Appeal for the Establishment of a Humane Society," *id.*, July 9, 1790, signed by George Brown, Andrew Wiesenthal, Lyde Goodwin, S. S. Coale, James Wyn-

MEDICAL AND CHIRURGICAL FACULTY

koop, Geo. P. Stevenson, Miles Littlejohn, Geo. Buchanan, Moore Falls and Moses Haslett.

Mention may also be made of a society composed of the sons and pupils of Dr. John Archer, which met at his country seat, "Medical Hall," during 1797 and 1798, and was known as the "Harford Medical Society."

The more serious attempt at organization, to which I have referred, although proving abortive, demands a detailed notice, not only on account of its local historical interest, but because of the bearing it had upon the origin of our own society. By reference to the files of the *Md. J. & Balt. Advr.*, of Nov. 21, Dec. 13 and 23, 1785, Feb. 21, 1786, and Dec. 5, 11 and 26, 1788, we find a discussion then going on among the physicians of the Western Shore upon the subject of medical reform and the prevalence of quackery in the State. The leaders in this movement were Dr. Charles Frederick Wiesenthal, of Baltimore, and Dr. Elisha John Hall, of Frederick County. The discussion began with a letter from Frederick Town. This led to the second communication, which contained the outlines of a plan for "a medical establishment." Then followed a reply to this by the first writer, who thought the plan proposed too complicated under "our present circumstances." He suggested caution and advised against attempting "too much at first, * * * considering it doubtful whether the Faculty would at this time bear being organized into a corporation." For this, "let us wait," he says, "for a more enlightened period, when *fraternal* affection shall abound among us." He proposed a petition to the Legislature asking for the appointment of a board of (say) three physicians—he thought this number sufficient—who should be paid by the State, and whose duty it should be to examine and license all applicants. The

latter were to pay a certain sum, which should be used for the maintenance of a library. A college might later be engrafted on this foundation by making the members of the board its professors.

As a result of this discussion, on December 5, 1788, Dr. Wiesenthal issued a call to the physicians of the *State* to convene at Stark's Tavern, in Baltimore, on the fifteenth of the same month, to decide upon a "plan for the regulation of medical practice." In accordance with this notice, a meeting was held at the time and place named, at which a society was organized with Dr. Wiesenthal as President and Frederick Dalcho, Dr. Wiesenthal's nephew and pupil, who had lately come over from London to study under his uncle, as Secretary.

The physicians of the Town had already organized themselves into a society on the twenty-seventh of the previous month. Dr. Hall, in his communication dated two days before the December meeting, addresses Dr. Wiesenthal as President, and in a letter written by Dr. Wiesenthal to his son Andrew, then a medical student at St. Bartholomew's Hospital, London, and dated November 28, 1788, occur these words: "We are just about procuring a Medical Regulation in a little more earnest than heretofore. At last Night's Meeting it was proposed for the Sake of Order and to have jointly more Weight to organize ourselves into a Society under Rules. I was unanimously nominated President and Mr. Frederik for Clark, so that he has now an office."

A letter addressed to the President from Dr. Elisha J. Hall, and which was published in full in the *Maryland Gazette*, December 26, 1788, was read, and also "a small sketch of a law," enclosed, which he had been requested to draw up for presentation to the Legislature. This "law" was very radical in its pro-

MEDICAL AND CHIRURGICAL FACULTY

visions, which were designed to apply to the present as well as the future. All physicians were to submit to examination and license. It is not surprising to learn from its author that many objected to this proposal. The communication concluded with the statement that they were "surrounded by swarms of quacks." The result of the meeting was that a petition was prepared for presentation to the Legislature and put in circulation in the town and State for the signature of citizens.

About this time the body of one Cassidy, who had been executed for murder, was taken by force from the students of anatomy, to whom it had been given for dissection, by the populace of the town. *Griffith's Annals*, in which this notice occurs, contains also the following: "At the entrance of Chester River, on May 17 [1788], at night, Capt. John De Corse of the packet was murdered by two ruffians he had taken on board there as passengers. The vessel was brought back to the Middle Branch [of the Patapsco] and abandoned. Patrick Cassidy, who had forfeited his pardon for former offenses by remaining in the State, was, with one John Webb, another convict, arrested, and they were executed some time after." There can be little doubt that this, the scene of this first "dissection mob"—we had a second in 1807, when Davidge's Anatomical Theatre, on Liberty Street, was destroyed—was Dr. Wiesenthal's "school," situated on Fayette Street, east of Gay, in the rear of his residence. Dr. Wiesenthal was the medical teacher of the day, and he had all the conveniences for carrying on dissection. The "school," a substantial brick building, two stories in height and about 72 x 20 feet, is still standing. Fayette Street was not opened until long after this period. The Doctor's residence was on the southeast corner of Gay and Fayette Streets, and was pulled down about twenty-

five years ago to make way for the shoe store which now occupies its site.

Charles Frederick Wiesenthal was a native of Prussia. Before coming to this country, according to family tradition, he was physician to Frederick the Great. He arrived in Baltimore in 1755, and from that time until his death, a period of thirty-four years, he was actively engaged in the duties of his profession, as the leading physician of Baltimore Town. Naturalized in 1771, during the struggle with Great Britain his scientific and professional attainments were freely given to the service of his adopted country. He was on the Committee of Observation, superintended the manufacture of saltpetre, was medical purveyor for the troops, examined the candidates for medical positions, served as surgeon of Smallwood's 1st Maryland Battalion or Regiment, later became Surgeon-General of the State, and was Surgeon-in-Charge of the Military Hospitals in Baltimore. After the war he assisted in organizing the German Immigrant Society, becoming its first President. He was prominent in charities and was a founder and active member of the first Lutheran church founded in Baltimore. He was deeply revered and beloved by his pupils, who looked upon him as the "Sydenham" of the town. His efforts and personal influence did much to elevate the dignity of the profession, in which, by reason of his eminent talents, his rare professional requirements and his high character, he was the unquestioned leader. By the community he was held in the highest esteem, and his death, on the first of June, 1789, in his sixty-third year, occasioned the deepest grief. (A memoir of Dr. Wiesenthal, by the author, drawn largely from his correspondence and accompanied by a portrait of him, may be found in a recent number of the *Johns Hopkins Hospital Bulletin*.)

MEDICAL AND CHIRURGICAL FACULTY

The return of Andrew Wiesenthal, in the summer of 1789, infused new life into the profession of Baltimore. On November 6 the Medical Society was reorganized with Dr. Edward Johnson as President, Andrew Wiesenthal, Secretary, Treasurer and Librarian, and Drs. John Boyd, Reuben Guildler, George Buchanan and George Brown, Court of Correspondence. During the ensuing winter an "essay" was made at a medical school by Drs. Buchanan and Wiesenthal, the former lecturing to a class of nine on "Diseases of Women and Children and the Brunonian System," the latter to a class of fifteen on "Anatomy, Physiology, Pathology, Operative Surgery and the Gravid Uterus."

The names of the students attending these courses, and their cards of acknowledgment, are contained in the *Maryland Gazette*, March 16, 19 and 30, 1790. The session of the Medical Society terminated in disagreement and disaster, and by the spring of 1790 it had been dissolved. Of the causes of its dissolution we are not thoroughly advised, but there appears to have been much and bitter feeling excited by it, and the minority, led by Dr. Buchanan, censured very severely the majority, who brought it about, and who found it necessary to defend their action in several communications in the paper. (*Md. J. & Balt. Advr.*, June 22 and 29, July 1, 2, 6, 9 and 16, 1790.) The following names of members of the Society are mentioned: Charles Frederick Wiesenthal, Elisha John Hall, George Brown, Lyde Goodwin, Samuel Stringer Coale, George Buchanan, Andrew Wiesenthal, Frederick Dalcho, Edward Johnson, John Boyd and Reuben Guildler. Probably there were others.

A brief notice is here given of those of the above list who are not embraced in the Biography. For *Charles Frederick Wiesenthal*, see *antea*, p. 16. For *Elisha John Hall*, *George*

MEDICAL AND CHIRURGICAL FACULTY

Brown, Lyde Goodwin, George Buchanan, Edward Johnson,
see Biographical part.

Samuel Stringer Coale was born in Maryland, March 9, 1754. He attended medical lectures at the Philadelphia School. April 26, 1775, he married Ann Youth, the daughter of Thomas Hopkinson, who was born in Philadelphia, November 23, 1745, O. S., and died in Baltimore, April 26, 1817. Dr. Coale began practice in Baltimore in 1775. He was appointed surgeon and manufacturer of saltpetre in 1776. He was engaged in the drug business—Coale & Ridgely—1779-80. In the projected medical school of 1790 he was assigned the chair of materia medica. He was physician to the Almshouse in 1789. He owned an estate called "Morven" at Elkridge, seventeen miles from Baltimore. His death took place in Baltimore, September 19, 1798.

Andrew Wiesenthal, the only son of Dr. Charles Frederick Wiesenthal, was born in Baltimore in 1762. He attended medical lectures in Philadelphia and in London, spending three years, from 1786 to 1789, in the latter city. He lectured on anatomy and surgery at 40 North Gay Street, from 1789 to 1798. He was appointed attending physician at the Baltimore Almshouse in 1789. In the same year he married Sarah Van Dyke, of the Eastern Shore. He was Judge of the Orphans' Court in Baltimore in 1796. In the Masonic Lodge he was Deputy Grand Master. He died in this city December 2, 1798. He was reputed to be a very skillful surgeon; he was also an accomplished musician and artist.

Frederick Dalcho, a nephew of Dr. Charles Frederick Wiesenthal, was born in London, of Prussian parents, in 1770. His father was an officer under Frederick the Great, who was severely wounded in battle and retired by permission of his sovereign to spend the remainder of his life in London.

MEDICAL AND CHIRURGICAL FACULTY

Young Dalcho, upon invitation of his uncle, came to Baltimore in 1787. Here he obtained a good classical education and studied medicine and botany under his uncle. He attended the lectures of Drs. A. Wiesenthal and Geo. Buchanan in 1789-90. He is credited by his biographer with having obtained the degree of M.D., and he may have been a graduate of the University of Pennsylvania, although his name is not contained in the catalogue of that institution, which is known to be defective. If he graduated there it was probably in 1792. He was appointed surgeon-mate in the U. S. A. in 1792, serving in South Carolina. Later he became surgeon, but resigned and settled in practice in Charleston in 1799. In 1805 he was Secretary of the South Carolina Medical Society. He was trustee of the South Carolina Botanic Garden. In 1807 he was editing the *Charleston Courier*. Some years later he studied theology and was ordained deacon in the Protestant Episcopal Church in 1814 and priest in 1818. He was appointed rector of St. Michael's Church, Charleston, in 1819. He was also made Grand Chaplain of the Grand Lodge of Masons of the State. He died November 24, 1836. Dr. Dalcho was the author of "An Historical Account of the Protestant Episcopal Church in South Carolina, from its First Settlement to the Revolution," 1820, a work which is an authority upon its subject. He also wrote "Ahriman Rezon" for Masons, 1822. He also edited *The Gospel Messenger*.

John Boyd was born in 1737. Quinan thinks he may have been an A.M. of Princeton in 1757. He established the second drug store in this city in 1769. He practiced here from that time until his death. He was on the Committee of Correspondence, 1774, and Committee of Safety, 1775. He was also a delegate to the State Convention in the former year and was a member of the committee which tried Robert Christie

MEDICAL AND CHIRURGICAL FACULTY

in the latter year. In 1776 he signed a call upon the ladies of the town through the newspaper for lint and bandages for the troops. In 1776 he was authorized by Congress to sign bills of credit. He was a partner of Dr. Miles Littlejohn in a drug store in 1790. He died in Baltimore, February 4, 1790.

Of *Reuben Guilder* but little is known. He was surgeon during the Revolution in Haslet's 1st Delaware Regiment, called the "Blue Hen's Chickens." He settled in Baltimore in 1787 and was physician to the Almshouse in 1789. According to Quinan, he died in Baltimore. There is a "Guilder, — Va., 1784," in the Catalogue of the University of Pennsylvania.

The Medical School, of which a full faculty and course of lectures for the season of 1790-91 was announced, shared the fate of the Society, and doubtless from the same causes. Dr. Andrew Wiesenthal continued his lectures to a class of private students for several years, probably to his death in 1798.

Although the first attempt at organization had proved abortive, it can scarcely have failed to leave its impress. The seed had been sown which was to germinate in the minds of the doctors for a decade and then ripen into the splendid charter of 1799. This Act received the signature of the Governor and thereby became a law of the land on the twentieth of January of the aforesaid year.

It would be interesting to know something of the details connected with its authorship and passage, to pry into the past and see the old doctors of a hundred years ago as they conferred together over this document of such far-reaching significance to them and their successors, to know who were they who labored most for its adoption and what was said and done on the occasion. But these, like many other events connected with those early days, are hidden from us, perhaps forever, and we can only picture them to ourselves in imagination.

MEDICAL AND CHIRURGICAL FACULTY

For it is a singular fact that in all the researches of the writer, extending back now twenty years, he has never seen or heard of any manuscript relating to the first meeting, and at the recent Centennial not a single letter or document was offered making any allusion whatever to it. The writer has in his possession a medical diary and note-book of Professor Potter, of the year 1799, in which it is not once mentioned. We know this much, however, that the charter met with opposition in its passage through the Legislature, and that for some years the members were in constant apprehension lest that body should seize some pretext to annul it. (*Balt. Observer*, vol. i, No. 25, Jan. 13, 1807.)

The charter is entitled "An Act to establish and incorporate a Medical and Chirurgical Faculty or Society in the State of Maryland." Its objects are stated in the preamble, which reads as follows: "WHEREAS, It appears to the General Assembly of Maryland that the establishment and incorporation of a Medical and Chirurgical Faculty or Society of Physicians and Surgeons in the said State will be attended with the most beneficial and salutary consequences, by promoting and disseminating medical and chirurgical knowledge throughout the State, and may in future prevent the citizens thereof from risking their lives in the hands of ignorant practitioners or pretenders to the healing art," etc. And again, in the body of the Act: "Such purposes as they may judge most conducive to the promoting and disseminating medical and surgical knowledge, or to alleviating the calamities and miseries of their fellow-citizens." The Act further provides for the possession and disposal of property, the holding of a meeting for organization, the making of by-laws and the adoption of a seal. It is expressly stipulated that the value of the property held at any time shall not exceed \$10,000 per annum. The

MEDICAL AND CHIRURGICAL FACULTY

officers were to be a President, a Secretary and Treasurer, and a Board of Examiners, to consist of twelve persons, "of the greatest chirurgical abilities in the State," seven from the Western and five from the Eastern Shore. No one in future, under penalty of \$50 for each offense, was to begin the practice of medicine in the State without either passing a "full" examination before the Board of Examiners of one Shore or the other, or in lieu thereof presenting a satisfactory diploma from a medical college. Each person obtaining such license was to pay therefor a sum not exceeding \$10. Those persons who should be elected to membership in the Society were to pay in addition a like sum. The first meeting was appointed to be held at Annapolis, on the first Monday in June, 1799, and fifteen members were declared to be a quorum. The incorporators and their successors were declared to be "*one community, corporation and body politic, forever, by and under the name of the MEDICAL AND CHIRURGICAL FACULTY OF THE STATE OF MARYLAND.*" The names of 101 incorporators were given, representing from three to six each the nineteen counties into which the State was then divided and the cities of Annapolis and Baltimore. These names, arranged alphabetically, are as follows:

- Alexander, Ashton, Baltimore.
- Anderson, James Moat, Jr., Kent County.
- Anderson, James, Montgomery County.
- Archer, John, Harford County.
- Archer, Thomas, Harford County.
- Baker, William, Prince George County.
- Beanes, William, Jr., Prince George County.
- Beatty, Charles A., Montgomery County.
- Birkhead, Thomas H., Harford County.
- Brown, Gustavus, St. Mary's County.

MEDICAL AND CHIRURGICAL FACULTY

Brown, Gustavus Richard, Charles County.
Brown, Morgan, Jr., Kent County.
Bourne, Thomas, Calvert County.
Buchanan, George, Baltimore.
Clagett, Zechariah, Washington County.
Cradock, Thomas, Baltimore County.
Cromwell, John, Baltimore County.
Davidson, James, Queen Anne's County.
Davis, Elijah, Harford County.
Downes, Jesse, Caroline County.
Duckett, Richard I., Prince George County.
Elzey, Arnold, Somerset County.
Forbes, James, Allegany County.
Fassett, Thomas S., Worcester County.
Gantt, Edward, Montgomery County.
Geddes, Robert, Kent County.

These names represent not only the best elements of the Maryland profession of the period, but the highest types of physicians to be found anywhere—men trained at the schools of Leyden, Paris, London, Oxford, Edinburgh, Glasgow, Aberdeen, Dublin, Philadelphia, pupils of Boerhaave, Hunter,

MEDICAL AND CHIRURGICAL FACULTY

Cullen, the Monros, Bell, Rush and others, whose names are enrolled high upon the scroll of fame; men erudite in all the knowledge of medicine as it was then taught and understood; fine classical scholars to whom Latin was almost as familiar as their native tongue. In the language of one of our orators, Professor Richard Wilmot Hall, biennial oration of 1815: "To classical erudition the most liberal and profound, they united the stores of medical learning with which the ancients or moderns had enriched the science of physic, or of which the schools of America and Europe could boast. In the academies consecrated to literature or medicine, either at home or abroad, they had given convincing evidences of their research, industry and talents, while they bore honorable testimony that the intellectual claims of their native State were inferior to no portion of the Old or New World. As physicians they enjoyed that respect and confidence which is the pleasing and voluntary tribute of intelligence to virtue and worth, which the successful application of the principles of our science so generally receives from the discerning and grateful. As men they were governed in their intercourse with society by all those refined and enlightened sentiments which generally arise from the study of the sciences and liberal arts; from expanded and comprehensive views of the sublime laws and order of Nature, and from a just sense of those moral obligations which bind man to his fellow-man."

Before proceeding further, it may be well to consider the sources of information at our disposal for the preparation of this history. The records of the Faculty are lamentably deficient, especially for the first half century of its existence. For this period we have the incomplete manuscript reports and other papers in the archives of the Society, which have been utilized to their fullest capacity. The paucity of our resources

MEDICAL AND CHIRURGICAL FACULTY

will appear more striking, when we learn that with the exception of a brief "Summary of Proceedings," for the first eight years, published in 1807, and an abstract of the Proceedings of 1807 and 1809, styled an "Appendix," no Transactions were issued until 1853. Occasional publications, however, emanated from the Society during this interval, as annual orations, etc., and the following may be mentioned in this connection: "A View of Fever," oration by Ennalls Martin, 1807; "The Medical Law of 1798," oration by Richard Wilmot Hall, 1815; "Treatise on Contagion," oration by Dr. N. Potter, 1817; "Medical Improvement," oration by Patrick Macaulay, 1823; Catalogues of the Library, 1835 and 1852; Lists of Members, 1807, 1822, 1836 and 1848; Constitution, By-laws and Fee Table. We have also the annual advertisements and notices in the newspapers and medical journals, especially those of Baltimore. From 1839 to 1843, the Faculty issued a quarterly journal, a most creditable production, which gives valuable information for those years and some interesting memoirs and notices of the library. In spite, therefore, of the want of complete manuscript records and printed Transactions, we are not without information of considerable extent and variety, which duly utilized should furnish a tolerably full and accurate history of the earlier half of the century. From 1853 the records are fuller, and we have printed Transactions of all the succeeding years except from 1860 to 1872, inclusive. During these twelve years, however, no meetings were held except in 1870, 1871 and 1872, and of these three we have some account in the *Baltimore Medical Journal*.

Of the meeting for organization, held at Annapolis, in accordance with the provisions of the charter June 3, 1799, we

MEDICAL AND CHIRURGICAL FACULTY

1799

have but a bare recital of results—the names of officers elected and members of the Boards of Examiners of the two Shores, constitution and by-laws, and resolutions. These meagre details but whet our appetites for further knowledge, but there is no means of obtaining it unless some at present unknown letter or manuscript be found to supply it. Of the one hundred and one charter members not one, so far as we have been able to discover, has left any record of the occasion. The last survivor, the venerable Dr. Ashton Alexander, died so recently as 1855, and having been, moreover, the first Secretary, he must have had a distinct recollection of the event. How perfectly natural it would have been for him to have left us some written description of it. But the opportunity passed unheeded, and even in his reported remarks at the reception given him during the convention of 1853, he makes no allusion to it.

Considering the circumstances, it is altogether likely that the meeting was held in one or other of the legislative halls at the capitol. It may be in the historic Senate chamber, where Congress had sat so recently and Washington had resigned his commission and read his ever-memorable farewell address. There we may fancy the founders preparing to sit in council, grave and reverend seigniors, deliberate in act and speech, still clad in the antique style, wig, cue, frilled shirt, high-necked coat with large brass buttons, knee breeches, stockings, shoe buckles and not least the gold-headed cane. The first to enter we will suppose is the Baltimore delegation, arrived by the morning coach. George Buchanan, full of enterprise and action, precedes, followed by Henry Stevenson, prince of inoculators; Lyde Goodwin, the surgeon; the courtly and handsome Ashton Alexander, one of the youngest of the incorporators, and Arthur Pue and Daniel Moores, both graduates

of Edinburgh. Close behind them are the delegates from Baltimore County: Thomas Cradock and Philip Trapnall, both great in the councils of the Church; John Cromwell, described as "a man of fine constitution and exemplary habits," and the others of the delegation. Next come the Annapolitans, headed by the striking figure of Upton Scott, venerable with his seventy-seven years, precise, practical and business-like. A delegation from the western part of the State has just arrived on horseback: the revered Philip Thomas, of Frederick, a leader in his community; John Tyler, from the same place, whose fame in couching the cataract extended far and wide; Richard Pindell, of Revolutionary fame and later the physician of Henry Clay in Kentucky; Zadok Magruder, Jr., from the Quaker settlement in Montgomery; James Anderson, from the same county, whose practice is said to have covered 100 square miles; Zechariah Clagett, of Pleasant Valley; George Lynn, of Cumberland, and others who had joined on the way. From the northeast come John Archer, of Harford, teacher, patriot, statesman, stern in look, the patriarch of American graduates, and Elijah Davis, who had been a prisoner on a Jersey prison ship during the Revolution. From the Potomac region come Charles Worthington, of Georgetown, who was known in his day as the "Court Physician," in his coach; Charles A. Beatty, the owner of the land on which Washington was built, and William Beanes, Jr., whose capture and imprisonment led to the writing of the Star Spangled Banner by his friend and rescuer, Francis Scott Key. From the south come Gustavus Brown, of Port Tobacco, who was consultant with Drs. Craik and Dick in the last illness of Washington; Daniel Jenifer, of the same place, and John Parnham, of Charles County, both surgeons in the Revolution. An early arrival must have been Charles Alexander Warfield, of Anne Arundel, the

1799 impetuous leader of the patriots in the Peggy Stewart affair and the first to propose a separation from the mother country. The Eastern Shore doubtless furnished its full quota, coming by sailboat across the Bay. From Easton come Tristram Thomas, distinguished by his extreme height, the tenuity of his frame and his gentle manners; the brusque Ennalls Martin and Perry Eccleston Noel, the Edinburgh graduate; from Kent come James Moat Anderson, a small spare figure with a limp and dressed in the sober garb of the Methodists; Morgan Brown, Jr., who is described by his contemporaries as a man of remarkable judgment and acumen, and Edward Worrell, the medical teacher of that section; and from Queen Anne come James Davidson, who hails from the Highlands, of Scotland, and Robert Goldsborough, of "Four-Square." These appear to have been the leaders in this remarkable assemblage of eminent and representative physicians and surgeons of Maryland.

Having alighted from coach and stage, having disembarked from vessels which lay moored in the Severn, and having dismounted from their horses, we can imagine them assembling for the business before them. A short time is doubtless spent in greetings and congratulation upon the success of their long efforts to obtain legislation and the prospect of usefulness which now unfolds before them. A temporary chairman is chosen and the convention then proceeds to the election of permanent officers. I suppose that all eyes must have turned upon Dr. Upton Scott, of Annapolis, as the one most suited by age, character and experience to fill the presidential chair, but that when his name was proposed he declined the honor, pointing to his already great age, and the infirmities connected with it, as disqualifications. But so preëminent was his fitness, that his excuses were not received and he was unanimously elected.

HENRY STEVENSON

1721-1814.

MEDICAL AND CHIRURGICAL FACULTY

1799

For the duties of Secretary, a young and active person is needed, and the very man for the place is found in Ashton Alexander, of Baltimore, not only because of his personal qualities, but because it was wise to locate the chief executive officer of the corporation in the metropolis of the State. John Thomas Schaaff, a man of German parentage, but native of the State, is elected Treasurer. The selection of the Board of Examiners was of not less importance than the officers already named, for upon it rested the responsibility of admission and the consequent morale of the organization, and we may be therefore sure that those chosen to this office represented the best elements of the meeting. They were for the Western Shore: Drs. John Parnham, of Charles County; Philip Thomas, of Fredericktown; John Thomas Schaaff, of Annapolis; Ashton Alexander, of Baltimore; Richard I. Duckett and William Beanes, Jr., of Prince George County, and John Archer, of Harford County—for the Eastern Shore; Drs. James Moat Anderson, of Kent County; James Davidson, of Queen Anne County, and Ennalls Martin, Perry Eccleston Noel and Stephen Theodore Johnson, of Talbot County.

After these elections, according to the printed records, a committee was appointed to frame by-laws and regulations. This committee reported on the following day. The regulations which were then framed provided that there should be a general meeting of the Faculty at Annapolis on the first Monday in June, 1801, and every second year thereafter, at which times a biennial election of officers was to be held. They gave to the President authority to fine any member acting in a disorderly manner at the meetings, a sum not exceeding \$10, or if the offense were considered sufficiently serious, to expel, with the consent of two-thirds of the members present. The Treasurer was required to collect license fees, to receive dona-

1799

tions of money and property, to hold stock, etc., and as a security for the faithful discharge of his trust, to give bond and security. It was provided that the Board of Examiners, of each Shore, was to meet annually: that for the Eastern Shore, at Easton, on the second Monday in April; that for the Western Shore, at Annapolis, on the first Monday in June, for the purpose of examining candidates and granting licenses; special meetings could be held at any time in the discretion of the President on the call of two members. Vacancies in office were to be filled by the joint Board for the balance of the term of office; each Board was authorized to fill vacancies in its own body. Each person obtaining a license to practice was required to pay \$10, and the licenses were to be signed, as provided by law, by the President and Secretary. The President was directed to furnish the form of license or certificate to be issued. Two months notice of all special meetings were to be given in the newspapers. Fifteen members were to constitute a quorum and a majority of two-thirds of those present at any meeting was necessary for election to membership.

The Society having been thus launched upon its career, before proceeding further, it seems desirable to say something about the status of the profession in Maryland at the time of the granting of this charter—the close of the last century. The prevalence of quackery has already been referred to and even amongst those from whom better things might have been expected evidences of irregularities, of entire disregard of professional ethics, and mutual distrust, were only too frequent. “Every pitiful Fellow nowadays (more dexterous at murdering and maiming his Patients than at terms of Art) assumes to himself with no small Arrogance the appellation of Doctor, far from being due to Quacks and Medicators, and only so to the gentlemen of the Faculty, the undoubted sons of Æsculapius,”

says a writer in a New York newspaper in 1754. (Quoted in "History of County of Kings," 1899.) New England was in no better condition. "Few physicians among us," say a writer from a New England colony a little later, "are eminent for their skill. Quacks abound like locusts in Egypt, and too many have been recommended to a full practice and profitable subsistence. This is less to be wondered at as the profession is under no kind of regulation. Loud as the call is, to our shame be it remembered, we have no law to protect the lives of the King's subjects from the malpractice of pretenders. Any man at his pleasure sets up for physician, apothecary and chirurgeon. No candidates are either examined or licensed, or even sworn to fair practice." ("History of New York," by Wm. Smith, A.M.) What was here said regarding these two Northern colonies applied with equal force to all. The first physician in Frederick City, Md., was an irregular, one Jacob Foucht. The papers of the last quarter of the century abound in medical advertisements, full of the most unblushing self-laudation and audacious claims of skill and success. It was a common thing for regular physicians to seek to secure patients by advertising treatment "much below the usual rates." Dr. Charles F. Wiesenthal's letters to his son throw much light upon this aspect of practice in Baltimore. In December, 1787, writing to his son Andrew, then a medical student in London, he expresses his satisfaction at the predilection which the latter manifests for surgery, in which the quack must stand aside, "whereas in physic in this part of the world the most errant quack, if he has assurance enough, will often claim the preference and obtain it before the man of real and true abilities." He mentions a Dr. Jericho (evidently a quack), who had operated here for cataract unsuccessfully, "extracting the crystalline lens." In 1774 a dispute arose between two physicians

MEDICAL AND CHIRURGICAL FACULTY

1799

as to the treatment of a patient, one charging the other with malpractice, alleging excessive use of venesection. The dispute was fully ventilated in the papers, an unfortunate resource for professional differences. From the close of the Revolution until the founding of the Faculty was especially a period of medical license, and Dr. Wiesenthal's letters abound with allusions to it and aspirations for a corrective. In one of his letters he speaks of a meeting appointed to be held at his house for the discussion of measures of reform, to which only one physician came, and he refers to a prominent member of the profession in the town, who had three times received written notices and had been absent every time. He seems justified in suspecting that there was something wanting in the character of that physician. The want of fraternal feeling among doctors is referred to by a public writer in 1786, and he considers it so great as actually to render impossible any organization at that time. Drs. Hazlett and Ross break up a partnership in practice in February, 1789, and they make it the occasion of a series of vituperative publications in the daily press. So, the breaking up of the Medical Society in the spring of 1790 is made the occasion of the washing in public of a lot of dirty linen for which there was no need, and which showed that many of those concerned were influenced by petty jealousies and personal spites more than by considerations of public and professional good. These things taken together indicate a sadly low state of ethics and great want of professional character, and show that the charter of 1799 came none too soon. The benefits from this charter were immediate and great, and whilst they were not everything that could have been wished, taking the imperfection inseparable from all human endeavor into consideration, we cannot but be struck with their extent. They will appear as this history proceeds.

MEDICAL AND CHIRURGICAL FACULTY

According to Dr. Peregrine Wroth, the books studied by medical students in Maryland at this date were Boerhaave, Van Swieten, Morgagni, Haller, Stahl, Cullen, the Munros, Mosely, Clyhorn, Lind and Sydenham, the last "perhaps the greatest of all." Writing in 1862, Dr. Wroth says these works were, in his judgment, "equal to any since published."

1799

1800. A severe epidemic of yellow fever prevailed in Baltimore during the summer and fall, which calls for some description. Before describing it, however, I may advert to the previous epidemic of the same disease here in 1797. (There was an earlier epidemic, in 1794, which caused 360 deaths in a population estimated at 18,000.)

1800

YELLOW FEVER EPIDEMIC OF 1797.—From the report of the Commissioners of Health of Baltimore, dated November 17, 1797, and published in the *Medical Repository* of New York, vol. i, we learn that they took charge of the department June 5, and appointed Conrad Smull Medical Superintendent of the Quarantine Hospital on Hawkins Point. About the end of June two young men, who occupied a warehouse in South Street, were taken sick and died in a few days. Their disease was reported to be yellow fever, and to come from putrid matter stored in their warehouse. The Board and several of the Faculty examined the premises, but found nothing. A thorough inspection was then made of the city. All vessels were required to stop at or below the Fort for ten days. As a malignant fever was prevailing in Philadelphia, a house was provided on the road thither, a small distance from the city, to accommodate travelers, if needed, but communication was not stopped. At the end of August the citizens of West Baltimore were enjoying unusual health; many nuisances had been removed, some low and sunken places had been filled up

1800

and streets had been cleaned. In East Baltimore (Fells Point) a bilious complaint had appeared early, and on August 26 the sickness was reported to be something more than common. The Fells Point doctors were written to and replies were received from several of the five or six practitioners there. Dr. John Coulter wrote that he had observed an epidemic fever ever since the third week in June, especially in those exposed to the night air. It was very dangerous and almost certainly fatal, except under powerful remedies. During the wet weather of the last of July and first of August it gave place for nearly two weeks to dysentery. He tells of ponds of stagnant water and sinks of putrid animal and vegetable matters, exhaling most offensive effluvia. The market and space around it were unpaved and constantly covered with offal thrown there by the butchers. Many go to the market well and come home ill. But the same fever had prevailed here at this season for several years past. He described the symptoms, the black vomit and hemorrhages. He had prescribed for upward of three hundred since June, among whom there had been eight deaths. Dr. Joseph Allender wrote suggesting a better accommodation for the poor. Dr. J. Jaquitt also replied. At a meeting of all the physicians of the city, called at the Exchange, August 28, only two cases (by Davidge and Smith) were reported in the city of a suspicious character, and the first of these was from Philadelphia. Drs. Goodwin, Davidge and Moores, a committee of the meeting, visited the Point and found only a common bilious remittent prevailing. September 2 a report was received which led the Commissioners to visit the Point where they found that Coulter had four or five dangerously ill, Allender three, and the others two in the same condition. There being no hospital, the Board had to afford relief to the sick in the houses where they were. The following week things got worse.

On September 7 a number of persons gathered to see the launching of a frigate. Many got wet, and several from West Baltimore were taken suddenly ill and died in a few days. On September 8 the first report of a case of yellow fever was received from Dr. Moores. On September 11 the Faculty met by request at the house of Dr. Adam Fonerden and suggested measures for the adoption of the authorities. They advised against removal of the inhabitants to the country and against stopping the communication between the Town and Point. The means at hand for dealing with the epidemic were the Hawkins Point Hospital and \$2000 appropriated by the Council for the year. The hospital was found inaccessible and was abandoned. A house for a temporary hospital was found not far from the Point and Dr. Way took charge of it on September 11, five nurses being provided. There was no room in it for colored persons. According to the figures there were 545 interments from August 1 to October 29, of whom 408 were adults and 137 were children. Of the residents of Fells Point 671 moved away and 2679 remained in their homes. As a result of this epidemic Dr. Davidge wrote the next year his work on yellow fever.

YELLOW FEVER EPIDEMIC OF 1800.—There is in the *Medical Repository* an article, entitled "Opinion of the Medical Faculty addressed to James Calhoun, Esq., Mayor of Baltimore, relative to the Domestic Origin of the Pestilential Sickness in that city during the hot season of 1800, communicated by Dr. Daniel Moores to Dr. Mitchell." Dr. Moores was a Baltimore physician, already mentioned in connection with the previous epidemic, and Dr. Mitchell was editor of the *Journal*. This "opinion," relating to the origin and means of obviating a recurrence of the epidemic, was given at the Mayor's request. There was no proof, it said, of foreign origin. It was due to

1800

an epidemic constitution of the air, as shown by its effect upon the senses and upon the brute creation and the more malignant character of diseases in the United States in recent years. That it was of domestic origin was shown by the fact that those first attacked had no communication with vessels engaged in foreign commerce, that they were at a distance from each other, and that they were exposed to powerful local causes. The first cases occurred at Fells Point, May 2. T. S. had worked near a putrid sink of water, containing vegetable matters in a state of putrefaction. J. T. had an offensive market yard, and the gutters and streets near his house annoyed all who passed them. None of the cases could be traced to vessels employed in foreign commerce; no one of them communicated the disease to others. The extinction of the disease by frost showed that its cause was in the atmosphere, also its occurrence at internal and scattered points in the United States. Its indigenous origin was also shown by its having prevailed at the same time in Harford County on the Susquehanna River, in Cecil County on the canal, in Charles and in Dorchester Counties. The Faculty were convinced that the fever could not be imported (human contagium), but the cause might be conveyed as in the foul air in the holds of vessels. But they believed this would hardly be worth considering if the air of the city were rendered pure by the removal of nuisances, since then it would be quickly and widely diffused. The gradual diffusion shows that it is not from foreign sources. If imported, the prominent features would show themselves at the beginning. The Faculty believed the following to have been the principal sources of the fever: The cove extending from the mouth of Jones Falls to the interior parts of Fells Point, the bottom of which was left bare by the recession of the tides for some weeks preceding the appearance of the fever from prevalence of

North and East winds. All the physicians at Fells Point agreed that it began on the borders of the cove and could be traced thence as the poisonous effluvia were wafted about by the winds. So pestilential was this cove that the laborers employed in filling up its northern shore were compelled to stop work early in the summer, and the effluvia from it affected those passing, even at a considerable distance. The docks, especially the interstices between the wharves, where water stagnated; stagnant water in cellars; gutters; filthy alleys and unpaved streets; back yards; privies; ponds and low grounds; made ground, of which the wharves and lower parts of some of the streets are formed; putrefying animal and vegetable matters were all supposed to be contributory factors.

The epidemic did not extend to the higher parts of the city remote from the exhalations. "The superintendent of the streets, who enumerated the nuisances previous to the epidemic appearance of the fever, declares that in whatever part of the city he then marked a *nuisance*, he can now mark the ravages of death." This report shows that the Faculty was fully alive to its responsibilities in this epidemic and prepared to take its full share in meeting and averting the calamities from which the community was suffering.

In connection with these two epidemics may be cited a most interesting letter in the same journal, vol. iv, by Dr. Pierre Chatard, of Baltimore, dated October 29, 1800. Dr. Chatard's superior education and acquirements gave to his opinions and statements great weight, and scarcely anyone in the profession then here—distinguished as it was by such names as those of Crawford, Buchanan, Davidge, Potter, George Brown, Alexander, Henry Stevenson, and others—could speak with as great authority. I feel sure, then, that I shall not only be excused, but thanked, for an abstract of this really able and

1800

original paper, expressed in such modest terms. He said that he had often seen and attended the yellow fever, both here and in St. Domingo, and that he regarded it as "essentially a bilious fever." The cold bath was appropriate, remarkably so in the nervous complications. The treatment varied according as the type was believed to be sanguineous and plethoric, or nervous. He had ordered venesection in only two instances of the present epidemic, although in that of 1797 at Fells Point he had cured many by the lancet, as the learned Rush had done in the epidemic of 1793—one accompanied by a real inflammatory diathesis. He was convinced that the predisposing cause of the epidemic of 1800 "results from a load of bilious, acrimonious matters lodged in the *primae viae* without any combination of inflammatory diathesis." He directed all his attention from the commencement to the evacuation of the alimentary canal, the prevention of the absorption of the deleterious matter confined in it, which, if once allowed to infect the mass of circulating fluids speedily decomposed the whole frame. At the beginning he gave tartar emetic gr. ss, in a teacupful of water every quarter hour until vomiting, with abundant drinks for twelve hours. Then Glauber's salts or castor oil. Strict abstinence from food was enjoined. Commonly patients were much better after the action of the cathartic. If so he continued diluents and emollient clysters. If fever continued he gave small doses of magnesia frequently with decoction of gentian or columbo. Sometimes he ordered a teaspoonful of De Häen's sedative potion every two hours. If delirium and prostration came on, with hot, dry skin, he used the warm bath and gave wine-whey with emollient fomentation and clysters. If black vomit or black stools or hemorrhage occurred, and especially if there were suppression of urine, remedies were hopeless. Perhaps it was best then to leave the patient to

nature "and to indulge every craving not absolutely pernicious." He had seen some thus recover. The Baltimore doctors frequently used blisters to arms, legs and epigastrium to relieve the head and irritation of stomach. They generally failed, and Dr. Chatard did not believe them suited to the disease, except where there was a very obstinate spasmodic constriction where one over the lower abdomen might create irritation and relieve the spasm. He was opposed to the use of mercury (calomel). This was then considered a specific. It was often irritating and produced evacuations which it was impossible to restrain. Some physicians claimed that all patients recovered after salivation. (Davidge claimed this.) He believed this opinion to be due to prejudice and mistaken observation. He had seen many persons die from terror under the impression that the disease was utterly incurable. "The flight of physicians from the city was not well adapted to remove such an impression." Prejudice existed regarding emetics; it was supposed that they increased gastric irritability. But the irritation of an emetic was always less than that incessantly kept up and renewed by the acrimony of the bile, etc., unless early evacuated by an emetic whose operation is neither violent nor long if blunted by a large quantity of warm water. Besides, did we not use cathartics in dysentery? "I should be glad," he concludes, "to offer you some opinions concerning the efficient cause of this destructive distemper, but the whole of this subject appears to be so obscure that it seems advisable rather to keep silence than to hazard mere conjectures. This much appears to be certain, that hitherto no person has discovered effectual means of extinguishing the acrimony of the bile, which seems to act a very important part in the disease, and which by its highly excited acid or alkaline quality excites at

MEDICAL AND CHIRURGICAL FACULTY

first irritation of the stomach and eventually decomposition of the whole system.”

1801 At the meeting of 1801, held at the capital of the State, a question arose as to the construction to be put upon the section of the law relating to membership, which some held restricted the election of members to the first meeting, or that of 1799. The matter was referred to a committee, which considered the section with aid of legal counsel and reported that no such restriction was implied, since its operation would limit the term of existence of the Faculty, a result evidently not contemplated by the Legislature; moreover, the last section empowered the Society to make any regulation not contrary to law which it thought requisite.

At this meeting Dr. Scott was compelled by his advanced age and bodily infirmities to decline a reëlection, and Dr. Philip Thomas was selected as his successor. Resolutions were passed upon this occasion expressing the sense of the Faculty upon Dr. Scott's "superior professional talents and disinterested services in promoting the institution" under circumstances requiring so great personal self-sacrifice.

A plan was also laid before the Faculty by "a distinguished member," the outlines of which, we are told, had been revised and approved by Dr. Scott, for the erection of a medical college in the State, which was to include within its scope the duties of the Medical Examiners, "with such other executive powers under the law as should appear to be necessary in order to give it additional respectability." Owing, however, to the small attendance, action upon this proposal was deferred until the next meeting.

We may, perhaps, safely conjecture that the author of this proposition, "the distinguished member," was Dr. Davidge.

Dr. Potter ("Sketch of Univ. of Md.," Hist. Soc. Lib.) tells us that Davidge had entertained the idea of founding a medical school ever since his settlement in Baltimore, in 1796, and that they had frequently conversed together on the subject. Dr. Davidge had at this time a private class of medical students.

From the entries of the Treasurer's book—preserved in the Society's archives—we learn that up to June, 1801, certificates and licenses had been issued to nineteen persons, making the receipts therefor \$190. The expenses for the same period were \$59, leaving a balance in the treasury of \$131. The first fee received was for a certificate issued to Wm. B. Tilden, of the Eastern Shore. At this meeting Dr. Schaaff was succeeded as Treasurer by Dr. Ashton Alexander.

The above book contains the following names of those who received certificates in 1800, and being the first names entered in the book they were evidently the first persons admitted to membership after the founding of the Society: Wm. B. Tilden, Dr. Bergsten, John Owen, John Ridgely, Wm. Rogers, Peregrine Warfield, Lloyd T. Hammond, Robert Johnson, the last being from the District of Columbia and all the others from the Western Shore, except Dr. Tilden. In 1801 the admissions by certificate were Dr. Watson, Dr. Wm. Cozens, Thos. Schley and Richard Duckett, and by license James Glasgow, John Dare, John McPherson, Adam Clendinen, Patrick Sim, Jas. Stonestreet and John M. Taylor.

The unfavorable experience as to attendance at this meeting and the claims of several matters of much importance, led to the calling of a special meeting the following year, and the advantages of Baltimore over Annapolis as the place of assemblage were so apparent that the former city was selected for this third convention.

MEDICAL AND CHIRURGICAL FACULTY

1802. The meeting opened with a very fine address from Dr. Philip Thomas, the President, which by resolution of the Faculty, was published in full in the Baltimore *Federal Gazette*, June 16, 1802. In this reference is made to the unparalleled advances made during the preceding twelve years in arts and science, agriculture and commerce, and especially to the salutary effects produced in the State by the establishment of the Medical and Chirurgical Faculty. The author alludes to an amendment adopted at the previous session of the Legislature, designed to prevent in future the introduction of additional empirics from other States and countries, of which there was already on hand too plentiful a supply. He recommends for adoption the plan of a medical college—"College of Physicians," he calls it—proposed at the previous meeting, and which he says is to be brought up before the present meeting. He suggests that in order to carry this plan into effect, additional legislation will be required. He speaks of the lax methods of admission and of indignities to which the Society had been subjected by the too mild indulgence of the Examining Boards.

The applicants, it seems, had attended one session at the Philadelphia School. This, it was found, had not sufficiently qualified them and they were only admitted to the Society on the promise that they would make up their deficiencies by subsequent study. This promise, Dr. Thomas says, they had not fulfilled.

Finally he proposes the reading of essays by members at the meetings and the publication of those which should be deemed worthy of such honor by the Society. He presents such an essay by Dr. John Baltzell, of Frederick.

The title of this paper was "An Essay on the Mineral Properties of the Sweet Springs of Virginia," etc. A copy of it,

dated Baltimore, 1802, may be seen in the Johns Hopkins Hospital Library.

The proposal for a college, anticipated in the President's Address, was presented to the meeting and after full discussion, referred to a committee for further action. On this committee were the following: Drs. George Brown, James Steuart, J. C. White, Edward Scott and John B. Davidge.

In the three years of the existence of the Society, there had been frequent violations of the law. In order to provide more effectually against such offenders, it was now decided to appoint censors, whose duty it should be to see that the law was not infringed upon by unlicensed practitioners, and that its penalties were inflicted upon trespassers, and to execute such other duties as might be required of them by the by-laws; also to obtain complete lists of practitioners of medicine and surgery within their respective districts, with places of residence and dates of commencement of practice. It was provided that there should be two censors appointed for each county, four for Baltimore, two for Annapolis, two for Frederick Town and one for Hagerstown. Three years later six additional censors were provided for from the city of Baltimore.

Censors were continued as a part of the machinery of the Society for about fifty years. The position was for the most part a mere sinecure, although a number of instances have come to my knowledge of efficient discharge of their unpleasant duty by these officials. No doubt the mere fact of there being such officers and the threat of legal prosecution had a salutary effect on would-be violators of the law.

At this convention (1802) a large Executive Committee was chosen "to meet from time to time during the recess of the Faculty, to receive communications and to report the same

MEDICAL AND CHIRURGICAL FACULTY

1802 at the stated meetings." This committee consisted of fifteen from the Western Shore, seven from the Eastern Shore, and the President and Secretary, *ex officio*.

The Board of Examiners was authorized to grant special licenses to dentists and oculists to practice in their respective branches, subjecting them to examination only on these. This was in accordance with the opinion of Mr. Luther Martin, the Attorney-General of the State, that the law authorized such action.

The following resolution was adopted: "That the members of the Medical and Chirurgical Faculty will use their utmost endeavors to discourage the use, and as far as may be in their power, prevent the sales of patent and quack medicines." The evils from this source were pointed out and the Executive Committee was asked to report what measures they deemed expedient to prevent them.

A committee of three was appointed to petition the Legislature to pass an act making the claims of physicians against the estates of deceased persons and insolvent debtors "preferred." This committee reported later that owing to "the prevailing disposition" of the Legislature, they deemed it inexpedient to prefer the petition.

The following endorsement of vaccination was adopted by the convention: "That the evidence of the great utility of the genuine vaccine inoculation is to them full and conclusive, and that they recommend it to their fellow-citizens to interest themselves in its propagation." This is the first instance recorded of the official recognition and sanction of Jenner's great discovery by any American association of physicians.

Inoculation for the smallpox was still in vogue in Maryland at the close of the last century. Introduced into Europe by the famous letter of Lady Mary Wortley Montagu of 1717,

it early crossed the Atlantic to our shores and held its ground here about eighty years; indeed it did not disappear entirely with the advent of vaccination. One, at least, of the founders, Dr. James Anderson, of Montgomery County, adhered to it until 1814, and Dr. P. K. Rogers, of Fells Point, Baltimore, clung to it until 1816. It was not forbidden by law in this State until 1850.

While the benefits to those who received it were obvious, inoculation kept the disease in existence and proved a constant source of infection; so that it was really an evil rather than a blessing. From the year 1750 until 1800 the disease was rarely absent in some part of Maryland, and frequently ravaged the towns and country with great virulence. Many physicians during that period practiced inoculation. Those who were best known in connection with it were Adam Thomson and Richard Brooke, both of Prince George County, Henry Stevenson, of Baltimore, Gustavus Richard Brown, of Charles County and Samuel Thompson, of Queen Anne's. The first named was widely known throughout the Colonies and was frequently sent for to superintend the operation in different parts of the country. He was the originator of the American Method, which became the accepted method of procedure throughout America, and the author of a tract upon the subject, printed by Benjamin Franklin in 1750, which ran through several editions. The second was the author of a paper on "Inoculation Without Incision," 1752, which was published in the *Philosophical Transactions*, of London, vol. xlvii. In 1765, Dr. Henry Stevenson was styled "the most successful inoculator in America." He did not confine his operations to Baltimore. From 1765 to 1776 and again after the Revolution, he maintained an inoculation hospital at his house "Parnassus," in the northeast suburbs of Baltimore,

1802 near the site of the present Penitentiary. As of interest, it may be mentioned that his charge for inoculation was two pistoles and for board and lodging twenty shillings a week. In 1776 Drs. Gustavus Rr. Brown and James Wallace established an inoculating hospital on Burdett's Creek, near the Potomac River in Virginia; their charge was "5 £ Md. currency" per case. Dr. Thompson inoculated persons at his house, "Medical Hill," in Queen Anne's County.

It did not take long for our Maryland physicians to appreciate the advantages of vaccination over inoculation, and Maryland must share with Massachusetts the honor of its first introduction into America. In the summer of 1800, Dr. John Crawford, a most enlightened physician of Baltimore, received from Dr. Ring, of London, a supply of vaccine virus "on cotton thread rolled up in paper and covered with a varnish which excluded the air." This he used here successfully. (See "Ring on Cowpox," 1801, p. 459.) A few months later a second supply of virus was obtained by Mr. John Taylor, who was then in London, from one of the physicians of the inoculation hospital at St. Pancras, and forwarded by him to his brother, Mr. William Taylor, a merchant of Baltimore. The latter gave it to his family physician, Dr. Miles Littlejohn and he placed it in the hands of Dr. James Smith, who was then attending physician to the County Almshouse in the suburbs of the city. Dr. Smith, who deserves to be called the Father of Vaccination in Maryland, since he did more than any one to promote its adoption in this community, began the use of this virus on the first of May, 1801, the first to undergo the operation being Nancy Malcum, aged 7 years. The virus was put up for greater security in three different ways. Some was on the blade of a lancet, some between small plates of glass, some on thread which was thoroughly charged with it, and the

whole was confined in a vial well corked and sealed. A careful record of each case was entered upon the books of the institution. Says Dr. Smith: "The physicians of Baltimore generally were invited to inspect these cases and offers were made to furnish them with virus, but no one could be prevailed on to make any use of it beyond the walls of the Almshouse during the whole summer, notwithstanding the smallpox was then prevailing in the city." (*Vaccine Inquirer, or Miscellaneous Collections Relating to Vaccination*, No. 1, 1822.)

A full account of these cases was published by Dr. Smith in the *Telegraph*, a daily paper of Baltimore, of December 3 and 5, 1801. All of them were freely exposed to the smallpox by inoculation and also in the natural way without exhibiting any response. This introduction by Dr. Smith antedated that in New York, Philadelphia, or by Jefferson in Virginia. Early in 1802 the operation was formally endorsed by the Medical and Chirurgical Faculty and Dr. Smith was aided in the establishment of a Vaccine Institution, the second in America, for the propagation of the virus and its free distribution to the poor. In 1805 it received a second endorsement from the Faculty. In 1809, by the exertions of Dr. Smith and others, all prominent in the affairs of the Society, the Legislature granted a lottery for the purpose of extending the operations of the Institute and in 1810 a Vaccine Society was organized in connection with it by a number of prominent and philanthropic citizens. In 1812 the Society was reorganized under the name of the "Vaccine or Jennerian Society." Dr. Smith was indefatigable in his exertions and so eager and unselfish were the physicians of that day for the universal participation of the blessings of the beneficent discovery, that on February 16, 1812, thirty-eight leading members of the Faculty offered to vaccinate gratuitously all who applied; indeed, these noble men went fur-

1802

ther and offered to pay each child presenting proof of genuine vaccination twenty-five cents. Can any other body of men be cited who have exhibited a greater spirit of unselfishness and self-sacrifice? By these agencies not only was virus furnished gratuitously throughout the State, but it was sent far and wide throughout the length and breadth of the land, and even to remote India, and many threatened epidemics were cut short. In the same year Dr. Edward Jenner, of England, tested Dr. Smith's virus and pronounced it genuine. In 1813 the United States Government established a "National Vaccine Institute," under the direction of Dr. Smith. In 1819, in order to settle doubts which had arisen with regard to the value of vaccination, Dr. Smith inoculated with variolous matter several members of his own family at the bedside of a smallpox patient. In 1821, on the recommendation of the Faculty, the city appointed vaccine physicians to each ward. In 1822 the Vaccine Society was reorganized, and the periodical already mentioned was published in its interests.

Meanwhile the country members were not idle. As early as April, 1803, Drs. Ennalls Martin, Robert Moore, Stephen Theodore Johnson and Tristram Thomas, all founders of the Faculty, from Talbot County, earnestly recommended the practice of vaccination, giving notice in the public press of Easton that they were fully provided with genuine cowpox matter and offering to inoculate the poor without fee or reward. "We shall think ourselves amply compensated," they say, "by having their assistance in extirpating a disease which has heretofore fell so peculiarly heavy on that numerous class of fellow-men." (*Md. Herald & Eastern Shore Intelligencer*, May, 1803.) Accompanying this card was a paper, entitled "A Comparative View of Natural Smallpox, Inoculated Smallpox and Vaccination." In 1816, smallpox being epidemic in

Queen Anne and Dorchester Counties, Drs. Robert Goldsborough, J. K. Harper and J. D. Emory offered to vaccinate the poor gratuitously, and by their zeal overcame the prejudice there against the operation.

1802

It would be interesting to trace this subject on to the present time; to recall the various experiments in vaccinating and inoculating the cow made by Jameson, Leonard, Knight and others; to describe the epidemics—frequently arrested—that have occurred in Maryland since the introduction of vaccination; to tell of the introduction of fresh virus from the famous Beaugency stock in 1866, and later of animal virus, and finally of the crowning of all—the use of aseptic virus, which has marked this present year. But the pressure of other matters forbids giving more space to this most interesting subject.

A resolution was adopted to appoint an orator at each meeting.

The following persons were licensed, after examination, to practice physic and surgery: Frederick Henry Shuman, M.D., Grafton Duvall, M.D., Hugh Whiteford, M.D., Richard Bowie, John M. Read and George W. Black.

1803. In his announcement of the regular biennial meeting the Secretary (Dr. Potter) alludes to the fact that many are still practicing without regard to the law, notwithstanding the appointment of censors at the previous meeting. Many of the censors, indeed, had made no returns. That those gentlemen who had neglected this important duty with which the Society had entrusted them might plead no apology for future omission, he publishes their names again. He also announces that certificates of membership can only be obtained at the constitutional meetings of the Faculty, nor does the possession of a diploma from a medical school excuse any from securing a

1803

MEDICAL AND CHIRURGICAL FACULTY

1803 license. Applicants for license were further required to make their applications at least three weeks in advance of the meeting of the Board.

A resolution was adopted appointing a committee of five to digest a plan for the establishment of a College of Physicians and to report the same at the next meeting. On this committee were placed Drs. George Brown, James Steuart, J. C. White, Edward Scott and John B. Davidge.

The Board of Examiners was announced as Drs. John Archer, Sr., George Brown, Charles A. Warfield, John Crawford, James Steuart, Ashton Alexander, Nathaniel Potter, Ennalls Martin, S. T. Johnson, Perry E. Noel, Tristram Thomas and James M. Anderson, Jr. Dr. H. Wilkins became Treasurer.

1805 The meeting of 1805 was held in Baltimore at the customary date, the first Monday in June. The physicians of the State were invited through the newspapers to attend, and those not already members to become so. The orator appointed in 1802 having been prevented by indisposition from discharging the duty at the session of 1803, did so this year, so that there were two orations on this occasion, one by Dr. John Crawford, the other by Dr. Davidge*—a rare treat indeed. During the early years of its history, or until 1839, the Faculty devoted itself almost exclusively to its executive duties—the examination and license of physicians and suppression of irregular practice. But little effort was made to render the meetings scientific. Essays were almost unknown, and the reports upon the different branches of medicine were not inaugurated until the late thirties. The presidents held

*Dr. Davidge's lecture is in the S.-G. Library, Washington.

office for an indefinite period, and presidential addresses did not, therefore, constitute an annual resource, as now. The more stately "oration," with its wealth of classical and mediæval erudition, and its opportunity for dealing with "glittering generalities," was more in accord with the spirit of the times, and constituted, doubtless, the leading event in the biennial meetings, helping to give interest to occasions which must have been greatly lacking in it to the general practitioner, whose attendance was not secured by the possession of an office.

Writing in the *British and Foreign Medical Review*, January, 1837, Prof. Robley Dunglison says: "The meetings are not attended with the same zeal as those of the Massachusetts Medical Society, the business concerns of the Faculty being generally left to the management of a few members."

The following were among the earlier orators (doubtless the list is incomplete): 1805, Crawford and Davidge; 1807, Ennalls Martin; 1809, Owen for the Western Shore and Wm. B. Keene for the Eastern Shore; 1813, Hall for Western Shore (oration not delivered until 1815), and Rees, of Easton, for the Eastern Shore; 1817, Potter; 1818, DeButts; 1820, P. K. Rogers; 1823, Macaulay; 1829, Richard S. Steuart; 1830, N. R. Smith; 1831, James H. Miller; 1833, Fonerden; 1834, Geddings; 1835, S. Annan; 1841, Collins; 1846, N. R. Smith; 1848, Baxley; 1850, C. C. Cox; 1851, S. B. Martin. Of these, besides Davidge's, already mentioned, there are extant Hall's "On the Medical Law of 1799," vol. i, Trans. M. & C. F.; Macaulay's "On Medical Improvement," pamphlet, Hist. Soc. Lib., and Potter's "Memoir on Contagion," 8vo, pp. 117, M. & C. F. Lib. There is a notice of Ennalls Martin's "A View of Fever," pp. 24, 8vo, in the *N. Y. Repository* for January, 1808.

MEDICAL AND CHIRURGICAL FACULTY

1807 In 1807 resolutions were passed dividing the State into seven districts and members were urged to form district societies (Medical and Chirurgical Societies), to meet regularly and send delegates to the biennial meetings.

I copy the following notice of the biennial meeting held in Baltimore on Monday, June 1, 1807: "It was very respectably attended, especially by the country practitioners and many useful regulations were adopted. The public business was finished on Wednesday evening and the examination of candidates commenced on Thursday morning. Thirteen were passed with the fullest approbation of the Board, consisting of seven members. This duty was performed with strictness and perfect impartiality, as it was the study of the Board to do ample justice to the candidates and society. During this examination talents were exhibited much, very much, superior to what is generally experienced. It would not be an exaggeration of language to declare that in some instances the attainments were splendid. These are some of the happy consequences of a law which was enacted with reluctance and continues to give so much cause of apprehension to many that it is deemed hazardous to make any further appeal to the Legislature to remedy defects lest the opportunity should be seized to annul an Act which must, when its salutary effects become fully known, secure conviction of its great and extensive utility."

This notice appears in the *Observer*, a weekly non-medical periodical published in Baltimore, vol. i, No. 25, June 13, 1807. It seems to have been written by Dr. John Crawford, a member of the Board of Examiners and one of the most eminent physicians of his day.

An event of this year demands an extensive notice; this was the founding of the College of Medicine of Maryland. The bill founding this college, the forerunner of the University of

Maryland, which, therefore, emanated from and owes its existence directly to the Medical and Chirurgical Faculty, was drawn up by Dr. John Shaw, who moved from Annapolis to Baltimore in February, 1807, and in the fall of the same year joined with Drs. Davidge and Cocke in giving a course of lectures to medical students. It passed both houses of the Legislature on December 18.

In its passage through the House, an amendment was proposed, making the college a part of St. Mary's College on North Paca Street, which then had a literary department and aspired to the dignity of an university, but now is limited to the education of priests of the Roman Catholic Church. The amendment was lost and the bill passed unaltered. Shortly before this, Dr. Davidge had erected on ground belonging to himself, on Liberty Street, near Saratoga, a small building for anatomical purposes. He procured a subject and began the instruction of his students, but the matter becoming known, a crowd gathered in front, and increasing in noise and numbers, soon resorted to violence, destroying entirely the building and its contents. The prejudice against dissection in Baltimore was very great, and a very general approval was given to the act of the mob. But one voice was raised against it, signed "Celsus." Upon the profession, however, it had the opposite effect. They rallied to the support of Davidge and his colleagues, a site was offered "in the precincts" for the institution, a committee was appointed to collect funds, and pressure was brought to bear to secure the necessary legislation. This was the second and last "dissection mob," which occurred in Baltimore. It is referred to in the *Observer*, in Potter's "Some Account of the Rise and Progress of the University of Maryland," 1838, and in Scharf's "Chronicles of Baltimore."

MEDICAL AND CHIRURGICAL FACULTY

1807

This bill or charter provided for a very close relationship between the Faculty and the college. The third section enacts "that the members of the Board of Medical Examiners for the State for the time being, together with the president and the professors of the said college and their successors, shall be and are hereby declared to be, one community, corporation and body politic, to have continuance forever by the name of the Regents of the College of Medicine of Maryland." The regents and their successors are empowered "to receive and hold property, both real and personal, and to dispose of the same at pleasure, to sue and be sued, and to do all and every other matter and thing in as full and effectual a manner as any other person or persons, body politic or corporate, in like cases may or can do." They are empowered to appoint professors for the different branches and also lecturers upon the sciences connected with medicine, these jointly to constitute the faculty of the college. Every licentiate of the Board of Examiners who shall have practiced five years within the State, shall be entitled to a surgeon's certificate from the college. The degrees of Bachelor and Doctor of Medicine are to be obtained after one and two years' attendance, respectively, an examination which is to be both private and public, and the writing of a thesis. The eighteenth section enacts "that the Medical and Chirurgical Faculty in the State of Maryland shall be considered as the patrons and visitors of said college, and their President for the time being shall be chancellor of the college, and the medical faculty of the said college shall give into the said Medical and Chirurgical Faculty, at each of their biennial meetings, a report of the progress of learning in the said college and of such other particulars as they may think fit to communicate."

MEDICAL AND CHIRURGICAL FACULTY

1807

The first members of the Faculty named in the Act were "John B. Davidge, M.D., and James Cocke, M.D., joint professors of anatomy, surgery and physiology; George Brown, M.D., professor of the practice and theory of medicine; John Shaw, M.D., professor of chemistry; Thomas E. Bond, M.D., professor of materia medica, and William Donaldson, M.D., professor of the institutes of medicine."

Drs. Shaw, Bond and Donaldson were not entitled to the degree here applied to them. The way in which they happened to have it was this: When the bill was being read in the Legislature, a friend of one of these gentlemen remarked that he did not see why he should not be an M.D. as well as the others. No one objected and so the title was added to all the names where it was wanting. They all became "Doctors of Medicine by Act of Assembly," the only instance of the sort, I imagine, on record. (Biographical Introduction to "Poems of John Shaw," Baltimore, 1810, Peabody Library.)

A very close relation is thus seen to have been contemplated between the college and the Society. The former, in fact, seems to have been entirely under the control of the latter since the Board of Examiners, twelve in number, constituted a majority of the regents. It is interesting to note that these relations were permanent and that the Medical and Chirurgical Faculty has never yielded up any of the rights and privileges granted it by this charter. In the celebrated case of Regents of the University of Maryland *vs.* Trustees of same, tried in 1839, the Court of Appeals so decided. The Faculty could therefore at any time, if it were so disposed, reassert and legally enforce its claims to the management of the college, now the School of Medicine of the University of Maryland. Such an event is not in the remotest degree likely to occur, if for no other reason for this, that the Faculty has its hands quite full

1807 attending to its own concerns without seeking to add to its burden the running of a college.

The arrangement of 1807 does, however, seem to have been very near perfect and the members of the Faculty must have contemplated it with great satisfaction, providing as it did the one thing lacking in their system, the facilities for instruction to those who aspired to a place in the ranks of the profession. It is interesting to note—and I stop in this place to note it—that although in the course of events the Society lost its influence and importance while the college acquired an increase of both, time has established a more just equilibrium by making the Society again the guardian of professional interests, the keeper at the gate, through which the college graduate must pass before he can enter on the practice of medicine. And all who are not swayed by prejudice or self-interest must rejoice that the old Faculty, shorn so long and so unjustly of rights that had been granted to it with the most solemn assurances of inalienability and perpetuity by the ultimate arbiter of such matters in the State, has at last recovered its authority and prestige.

In 1807 Baltimore had a population of about 40,000, being the third city in size in the Union. It was then nearly half the size of New York and Philadelphia. Although the last of the great Atlantic seaports to be founded and although but a small town at the beginning of the Revolution, it had become a great centre of trade and population. At this time the medical schools in the United States, with the date of their founding, were: University of Pennsylvania (first called College of Philadelphia), 1765; Harvard, 1782; Dartmouth, 1798; College of Physicians and Surgeons, New York, 1807. In the session of 1807-08 the University of Pennsylvania had 270 students and 60 graduates. There were already two collegiate

institutions in Baltimore, the Baltimore College which sprang from Mr. James Priestly's Academy in 1804, and St. Mary's College, founded by French priests of the Catholic Order of St. Sulpice in 1791. There was one public library, the "Baltimore Library," founded in 1796, which contained at this time "no inconsiderable collection of books upon medical science." There were three hospitals, the City and County Almshouse, near the site of Howard and Madison Streets, the Marine Hospital and the Baltimore or Maryland Hospital, situated where the Johns Hopkins Hospital now is. The last was not limited to the treatment of the insane until 1838.

The lectures having already partially begun were continued during the winter of 1807-08, with the added respect derived from legal sanction. At the beginning they were given at the residences of the professors, with such apparatus and accessories as could be improvised for the occasion. Some clinical lectures were also delivered at the Almshouse. Later an old and much dilapidated schoolhouse, situated on Fayette (then called "Chatham") Street, at the corner of McClellan's Alley, was secured and this continued to be used until the completion of the building on Lombard Street. The first course was an incomplete one, consisting only of the lectures already begun. At the first meeting of the Board of Regents, on December 28, Dr. Brown resigned his chair and on his motion was succeeded by Dr. Nathaniel Potter. Dr. Brown was made President of the Board of Regents and Dr. Davidge Dean of the Faculty. Dr. Potter did not begin his lectures until December, 1808. Dr. Donaldson's health was so bad that he was compelled to withdraw, and Dr. Bond also withdrew to the country for a similar reason. The duties of the chair of Institutes were assigned to the other chairs and the vacancy in the department of materia medica was not filled until 1809. Dissection was

MEDICAL AND CHIRURGICAL FACULTY

1807

suspended for some time after the "outrage." The class the first year consisted of seven, the second of ten, the third of eighteen. The first students were graduated in 1810, five in number; in 1811 there were ten graduates.

The names of these graduates are unknown. The fact of their graduation rests solely upon the statement of Dr. Potter, in his pamphlet, "Some Account of the Rise and Progress of the University of Maryland," 1838. (Hist. Soc. Lib.) I think it fair to conclude that the five graduates of 1810 were among those who were licensed by the Faculty to practice in June, 1810, and I venture to think that their names are Francis Cooksey, George T. Gunby, James Orrick, William H. Dorsey and either Robert W. Armstrong or Handy Harris Irving. There is much difficulty in reaching a conclusion on this point, which is one of some interest to friends of the University of Maryland, but on a careful study of the list of names of licentiates of 1810, given in the Treasurer's report, I have been able to eliminate from consideration all but these six. The first names of graduates of the College *published* are John O'Connor, of Baltimore; Charles L. Snyder, of Hampshire Co., Va.; Henry Curtis, of Richmond, Va.; Corbin Amos, of Harford Co., Md., and Thomas D. Jones, of Somerset Co., Md. ("Balt. Med. and Philos. Lycæum," Potter, vol. i, No. 4.) These gentlemen got their degrees in 1812. The following is a copy of one of the diplomas of this class, now in the Faculty room at the University of Maryland:

COLLEGIUM MEDICINAE TERRAE MARIAE
Omnibus ad quos hae literae pervenerint,
SALUTEM.

Quum vir ornatus et summis animi dotibus instructus, Corbineus Amos, postquam pleno gradu arti medicae studuisset,

MEDICAL AND CHIRURGICAL FACULTY

nos honores academicos poposcerit, seque periculum sui facere in rebus medicis paratum ostenderit, per universam eum medicinam examinavimus. In quo periculo cum scientiarum ac medendi artis se abunde peritum probaverit, nos dictum Corbineum Amos Medicinae Doctorem creandum et declarandum censuimus, eumque Medicinae Doctorem creavimus et declaravimus, et his literis Doctorem constituimus, atque apud omnes haberi et appellari voluimus, eique facultatem plenissimam damus de re medica docendi et consultandi, et denique tam medicinae theoreticae quam practicae munera ubicunque terrarum exercendi et omnes simul honores, et jura et privilegia, ei concedimus, quae Medicinae Doctori usquam gentium conceduntur.

1807

In quorum fidem literis hisce sigillo Collegii communi munitis nomina nostra subscripsimus.

Datum Urbe Baltimoriensi Mensis Maii die quarto Anno Domini MDCCCXII.

CAROLUS A. WARFIELD,

Praeses.

JOANNES B. DAVIDGE, M.D.,

JACOBUS COCKE, M.D.,

*Profess. Anat. et Chirurg. et
Physiol. simul docentes.*

ELISHA DEBUTTS, M.D.,

Chimiae Profess.

NATHANIEL POTTER, M.D.,

*Theoreticae Medicinae et
Praxeos Prof.*

SAMUEL BAKER, M.D.,

Profess. Mat. Med.

The above diploma is in a perfect state of preservation, including its large oval seal. The names of the graduates of

MEDICAL AND CHIRURGICAL FACULTY

1811 are unknown. They were probably some of the licentiates
1807 of that year: Robert Dawson, Stanislaus Coomes, Benjamin J. Semmes, Wm. N. Luckey, Charles D. Bruce, Jonathan Waters (?), John Shaaff Stockett (?), Henry Stonestreet (?).

The expenses were borne equally by the members of the Faculty of the College; there is no evidence that the Medical and Chirurgical Faculty gave any assistance in this direction.

Dr. Shaw's health gave way before the close of the first session, and he died on the tenth of January, 1809, of a rapid pulmonary consumption. He was succeeded by Dr. Elisha De Butts. Samuel Baker was chosen to the vacancy in materia medica in the same year. The other additions in the Faculty during the college period were William Gibson, professor of surgery, and Richard Wilmot Hall, adjunct professor of obstetrics, 1812.

The necessity of a suitable building was early apparent. There being none in the city that could be converted to their purpose, the Faculty determined to build, and an act was procured from the Legislature early in 1808 authorizing the drawing of a lottery for the benefit of the college. Subsequently other acts were passed. To Dr. James Cocke was due the credit of placing the institution upon a successful financial footing. But little was realized however from the lottery until after the college had passed into an university. Financial aid was received from Colonel Howard and other wealthy citizens. A lot was purchased from Colonel Howard on the northeast corner of Lombard and Greene Streets, and a building was here begun on the seventh of May, 1812, under direction of Mr. R. C. Long, a distinguished architect of the day. That building, constructed after the model of the Pantheon at Rome, still serves for the purposes of the University of Maryland, and in its massive proportions bids fair to endure for centuries. When erected

UPTON SCOTT

1722-1814.

it stood almost alone in the Western Precincts, and excited the pride and admiration of the entire community. From it a fine view was had of the Patapsco and Chesapeake. This building was so far advanced as to be partly tenantable during the session of 1812-13.

Meanwhile arose the idea of engrafting upon the college an university. A memorial for the passage of an Act to found an university was presented to the Legislature by the President and Professors of the College, with the approval and advice of the Board of Regents. The Act was passed December 29, 1812. By it the College of Medicine "is authorized to constitute, appoint and annex to itself the other three colleges or faculties," Divinity, Law, Arts and Sciences, and "the four faculties or colleges thus united, shall be constituted an university by the name and under the title of the University of Maryland." With this Act control of the institution passed in all probability forever from the hands of the Society. The latter is not alluded to in the Act. There appears to have been no formal relinquishment of rights, but there was no avowed opposition. The Court of Appeals of Maryland, in an opinion delivered at its December term, 1838, declared that the Act of 1807 was still in force and that the second charter did not invalidate the first; that in adding to the College of Medicine other colleges, the former did not lose its identity or continuity, but continued amenable to the law of 1807. Practically, however, the two bodies severed their connection absolutely at this point. No attempt has ever been made to exercise any further authority under the original charter and none ever will be. Therefore the history of the institution ceases longer to have any interest in this connection and I shall proceed to consider other matters of interest.

MEDICAL AND CHIRURGICAL FACULTY

1807 From a study of the list of members published with the "Summary" of 1807, I find that the whole membership at that date was 257, including the 101 founders; only some 40-odd appear to have had a degree, M.B. or M.D.

Mention should be made of the appointment this year of a committee of twelve, styled "Committee of Correspondence, Record and Publication," whose duty it was "to solicit and receive papers on medical and other subjects connected therewith and as soon as sufficient matter shall have been collected, to publish a volume to be called 'The Transactions of the Medical and Chirurgical Faculty of Maryland,' to be continued annually, provided the necessary materials shall present themselves." On this committee were Drs. George Brown, Warfield, Crawford, Martin, Shaw, Donaldson, Bond, Davidge, Alexander and Potter, and two years later they published a pamphlet styled "Appendix," giving an abstract of the proceedings of 1807 and 1809.

1809 1809. At the regular biennial meeting held this year, Dr. Samuel Baker was elected Secretary, vice Dr. Nathaniel Potter, resigned, and Dr. Solomon Birkhead was elected Treasurer, vice Dr. John Shaw, deceased. Dr. John Owen, of Baltimore, was elected orator for the Western Shore and Dr. W. B. Keene for the Eastern Shore. The Medical Examiners were Drs. Crawford, Birkhead, Davidge, Bond, C. A. Warfield, Cromwell, Potter, E. Martin, J. M. Anderson, Noel, and T. Thomas. Seven candidates were licensed.

The case of one L. S. Rodriques, practicing without authority in the city, was reported and Dr. Allender, the censor, in whose district he resided, was ordered to proceed against him. "Dr. Allender's department," it was said, "has been liberal, forbearing and just towards Rodriques, who has refused to

MEDICAL AND CHIRURGICAL FACULTY

submit to examination." The result of this arraignment is not known, but the name of "L. Rodriguez" was among those who received small sums from the City Council in 1820 for their services in connection with the epidemic of yellow fever.

1809

A list of persons elected to membership "since 1807" includes sixty-one names, of whom thirteen are accorded the title of M.D.

There is in the Faculty's archives a bill against Dr. S. Baker for "50 large skins of parchment at \$1 each," dated September 4, 1809. It is the oldest MS. record extant there with two exceptions.

1811. Dr. Philip Thomas was reelected President, Dr. James Smith, of vaccination fame, was elected Treasurer, vice Dr. Birckhead, resigned, and Dr. Samuel Baker, Secretary. The financial statement is, receipts \$350.25, balance on hand \$69.62½. The following were elected Examiners: Drs. Crawford, Warfield, Cromwell, Donaldson, Potter and Baker. Dr. Richard Wilmot Hall was elected orator for the Western Shore and Dr. John T. Rees for the Eastern Shore. Jonathan Waters, Robert Dawson, Henry Stonestreet, Charles D. Bruce, Stanislaus Coomes, Benedict J. Semmes, I. B. Taylor, William N. Luckey and Corbin Amos, "having passed through their examinations, were regularly received into the Medical and Chirurgical Faculty."

1811

The Board of Examiners was directed to hold two meetings a year on each Shore, one in the spring and the other in the fall and candidates were required to hand in their names before the examination began.

Among the archives is a report of the "Censors of Baltimore," dated June 1, 1811, which bears the impress of Dr. John Crawford's hand and is here reproduced in abstract:

MEDICAL AND CHIRURGICAL FACULTY

1811 June 1, 1811. Report of Censors of Baltimore. Met at Dr. Crawford's office this evening; present, Dr. Cromwell, Chairman *pro tem.*, Smith, Smyth, Allender and Crawford, Secretary. Have had repeated meetings since appointment. Continue to lament the difficulties they have experienced in bringing defaulters to justice or in preventing them from committing outrages on an uninformed and large class of our citizens. They are still fully persuaded that a conviction in the minds of magistrates of their not being authorized to give judgment in favor of claimants for medical services who could not produce a license to practice as the law prescribed would greatly diminish the evil complained of. They therefore strongly recommend that authority be granted to the Board of Censors to prosecute such measures in the name of the Medical Faculty of the State as in their judgment might be best calculated to secure a due regard for the law and a strict enforcement of its beneficial penalties. This, perhaps, would be most certainly accomplished by obtaining and publishing the opinion of one or more of the most respectable lawyers on the subject. The Board of Censors having had little business to transact strictly appertaining to the object of their institution had directed their attention to the description of diseases that had appeared in Baltimore since the last meeting of the Faculty in 1809, an enumeration of which they present in the hope that it would prove acceptable. The diseases are given by months with remarks, commencing June, 1809, with cholera infantum, cholera morbus, diarrhœa, dysentery, cynanche tonsillaris, intermittent, rheumatism. Dysentery prevailed in the early part of the month; there were a few cases of ardent fever, and erysipelas was prevalent and refractory. Intermittents figure largely. They "generally yielded to the cinchona." "One case of cholera morbus terminated in typhus." "A convales-

cent from bilious fever relapsed from a violent fit of anger and was relieved from almost a state of asphyxia by alcohol, wine and mosch." A case of iliac passion, wherein fæces were discharged by the mouth as fully formed as if from the anus, was successfully treated by enemata composed of ol. terebinth. ʒiiss, nicotiana ʒj, aq. bul. lb. j. Typhus is among the diseases enumerated and in December, 1809, "typhus mitior" occurs. Pleurisy and peripneumony were frequent in the winter, and catarrh with the characteristic dyspnœa of cynanche tonsillaris. There were some cases of mania and melancholia, one in December "of Chorea St. Viti in a lady, who endeavored during the paroxysm to bite her physician. He gave her a smart box on the side of her head which instantly secured decorum." Her hair was cut off and by cold applications to her head she was speedily relieved. In the same month "the bite of a cat induced a series of spasmodic affections, some of them ludicrous, which finally terminated in epilepsy." In January, 1810, abscess of the liver is reported; catarrhal affections in two instances accompanied with inflammation and suppuration of the sublingual glands; several cases of febris catarrhalis biliosa; one of a large indolent and insensible tumor of the parotid glands, accompanied with a teasing cough, diarrhœa and anasarca over the whole surface; "phthisis pulmonalis" unusually frequent. "A striking proof of its contagious nature occurred in a woman who contracted that disease about eighteen months ago. It was not until last month that the disease was manifest in her husband. Both had a colliquative diarrhœa, the latter from nearly the commencement, the former in the early part of the disease." With the coming of April, 1810, intermittents reappear, hitherto absent; also cholera infantum. "Bilious in some cases ardent. Many cases of hæmoptysis, one fatal. Pertussis frequent, often severe, to several fatal; in two instances sensible

MEDICAL AND CHIRURGICAL FACULTY

1811 relief obtained by vaccination." In May "a disease of the testes in a boy occasioned by self-pollution." In August ninety deaths from cholera infantum, in the August before (1809) only forty-three occurring. Again in October we have typhus mitior. From March to May, 1811, smallpox and spotted fever are noted.

The following is a copy of the security furnished by Dr. Smith, Treasurer: "Know all men by these presents, that we, James Smith and Solomon Birkhead, of Baltimore County, are held and firmly bound unto the Medical and Chirurgical Faculty of the State of Maryland in the sum of \$1500, money of the United States, to be paid to the said Faculty or to their certain attorney or assigns, to which payment well and truly to be made and done we bind ourselves, our heirs, executors and administrators firmly by these presents, sealed with our seals and dated this fifth day of June, 1811. Whereas the above-named James Smith has been appointed Treasurer of the Medical and Chirurgical Faculty of the State of Maryland and is empowered to collect all money arising from licenses given by the Board of Examiners and to receive all donations that may be made to the Faculty and shall pay the same agreeably to the order of the President or Secretary or any two of the Examiners and shall take charge of and preserve for the use of the Faculty all property of whatsoever kind it may be: Now the condition of this obligation is such that if the above-bound James Smith shall faithfully discharge the trust reposed in him, then the above obligations to be void, else to be and remain in full force and virtue in law. Signed, sealed and delivered in the presence of Samuel Baker, Secretary.

JAMES SMITH, [SEAL]

SOLOMON BIRCKHEAD." [SEAL]

1813. At the time of the biennial meeting, June 7, there was much excitement in consequence of the war with Great Britain and the proceedings were consequently cut short. There were twenty-three members present at the opening with Dr. Philip Thomas in the chair. Dr. Thomas was reëlected and Dr. Arnest was chosen Recording Secretary, vice Dr. Baker, declining reëlection. Dr. James Smith was reëlected Treasurer. The Western Board of Examiners consisted of Drs. Davidge, De Butts, Potter, Cocke, Gibson and Donaldson, embracing as will be noted every member of the University Faculty with the exception of Dr. R. W. Hall, who was the orator. This shows the increasing influence of the college, which had now occupied its great building on Lombard Street and was stretching out after university rank. A committee of five was appointed to prepare testimonials on the lives of Drs. C. A. Warfield and John Crawford, deceased. Dr. Hall, the orator for the Western Shore, apologized for non-compliance with his duty and as Dr. Rees, the orator for the Eastern Shore, was prevented from attending the meeting "by imperious circumstances," it was resolved that both be requested to deliver their orations at the next convention.

1813

1815. Dr. Philip Thomas, the President, having recently died, it was necessary to select a successor, and Dr. Ennalls Martin, of Easton, was chosen to the high office. Dr. Martin, who was perhaps the most eminent physician on the Eastern Shore, was well worthy of the honor. He signalized the occasion of his election by reading at the annual convention "An Essay on the Epidemics in the Winters of 1813 and 1814 in Talbot and Queen Anne Counties, Maryland" (Balt., 12mo, pp. 78).

1815

But the event of this convention seems to have been the scholarly oration of Dr. Richard Wilmot Hall, delivered in the

MEDICAL AND CHIRURGICAL FACULTY

1815 Chemical Hall of the University, on the fifth of June. The delivery had been postponed from the meeting of 1813, on account of the state of the country.

Dr. Hall took for his subject "The Medical Law of 1799." He said the law had met with opposition and the purity of motives of the Legislature in passing it had been questioned; its necessity and justice had been denied and its sanctity violated. It was said to have established a monopoly, confining the benefits of medical practice to a select few. The result, however, had justified the wisdom of its passage, for the number of empirics in the State was now comparatively small and daily decreasing, whilst the medical profession had acquired greater respectability and public confidence. The conduct of physicians had become less ostentatious and more rational.

This is most interesting testimony to the salutary effects of the law from one who, although not a founder, could yet recall the very beginning of the organization and had the fullest opportunities of information upon the subject.

Two hundred and fifty copies of this oration were published at an expense of \$20.

The following was the Treasurer's report (Dr. Handy), presented June 6, 1815:

Society owns in funded stock—

| | |
|---|-----------|
| 5 shares Farmers Bank of Md., cost..... | \$250.00 |

| Balance in hand above date..... | \$141.82½ |

MEDICAL AND CHIRURGICAL FACULTY

A special meeting was held in Baltimore in December, 1816, to endeavor to carry into effect the resolutions of 1807 relating to the formation of district medical societies. By these resolutions a division of the State was contemplated into seven districts for the purpose of more perfect organization and effective coöperation. The physicians of the Eastern Shore had anticipated this action by the formation of a society in the sixth district composed of Talbot, Caroline and Queen Anne Counties, with headquarters at Easton. The first meeting was held at Easton, November 5, 1815, and Dr. Tristram Thomas was elected President. Dr. Thomas presented to the special meeting a report of this society of which I make the following abstract:

1816

“In conformity to several resolutions passed by the Faculty of Maryland at their session in June, 1807, dividing the State into medical districts with a view to the establishment of District Medical Societies for the promotion of Medical and Chirurgical Knowledge,” in November, 1815, the members of the Faculty residing in the Sixth Medical District were invited by public notice to meet at Easton for that purpose. The Society was then organized. One stated and two adjourned meetings had been held and he had much pleasure in saying that the Society though in its infancy was in a flourishing state and promised to gratify the objects contemplated by the resolutions. He hoped that such a degree of zeal had been excited as would tend to the advancement of medical science. The minutes of this Society are still in existence in the hands of Dr. James S. Chaplain, of Trappe, and I have found four interesting papers in the archives which appear to have been read before it:

(1) Dr. Tristram Thomas (1816) treated a case of tetanus by dilating the wound and filling it with spirits of turpentine on lint, a poultice over this and frequent immersion of the foot

1816

in a bath of warm lie; internally, laudanum, 80 drops at once and after that 50 drops every two hours, with a glass of Madeira wine every hour. Next day the symptoms being the same, mercurial ointment was rubbed in the neck every three hours. These measures appearing to be of no avail, an issue was made on the nape with caustic potash, which effected a cure.

(2) Dr. Ennalls Martin's paper was on "Strangulated Hernia" and of great interest. He prefers "compression" to a cutting operation. He records many cases coming under his care, the first in 1785.

(3) Dr. Martin also relates a case (1816) of anasarca relieved by enormous doses of saltpetre (nitrate potash) in cider. A man took by mistake in one day 3ij of the saltpetre, drank a pint of whiskey and took a large dose of laudanum after which the anasarca entirely disappeared.

(4) The third paper was by Dr. Robert Goldsborough and was devoted to the introduction of vaccination into Queen Anne's County. There was much prejudice against it among the people which seemed partly justifiable in view of the unsatisfactory results. The correspondence between Dr. Goldsborough and Dr. James Smith, of Baltimore, upon the subject is given in full.

A proposition was submitted at this special meeting, December 4, 1816, by a committee consisting of Drs. J. Scanlan, McDowell, R. Goldsborough and R. W. Hall, to do away with the Boards of Examiners, and let the Faculty of Physic of the University be the Examining Board, said Faculty alone having power to grant licenses. A proposal by the same committee for annual meetings was withdrawn. As a result of the special meeting resolutions were adopted which were made known to the profession throughout the State by a committee consisting of Drs. Owen and Hall, who issued a circular on the subject.

MEDICAL AND CHIRURGICAL FACULTY

No great results seem to have followed these efforts. The Eastern Shore Society, the longest-lived, lasted only a few years. There is mention of others in Baltimore City, Allegany and Worcester Counties, and the activity of the Baltimore Society in the epidemic of 1819 will be mentioned presently. There are in the archives letters from Dr. D. Claude, a censor of Annapolis, dated July 22, 1817, and from Dr. Nathaniel P. Causin, a censor of Port Tobacco, Charles County, dated September, 1817, making inquiries of the Secretary with a view of establishing district societies at those points. 1816

1817. The annual convention assembled June 2, with nineteen members in attendance. Dr. Martin was unanimously reelected President and Dr. Macaulay was made Recording Secretary. For Treasurer there were three candidates, Drs. Smith, Clendinen and Handy, the last-named being elected. The minutes of 1815 and of the special meeting of December, 1816, were read. At the second day's session twenty-five were present. Dr. DeButts was elected orator for the next year. Five of the seven members of the Western Board of Examiners elected were professors in the University. The Faculty having been disappointed in its biennial orators, Dr. Potter had been requested to assume the office and had consented to do so. "The Committee of Arrangement relating to the oration for to-day reported that the Faculty would meet ye orator at the lecture room of ye college." The title of the oration, which was delivered in Chemical Hall at 5 p. m., was "Contagion," and as subsequently published it formed a good-sized volume of 117 pp. 8vo. Baltimore, 1818. 1817

Dr. Potter discussed the subject chiefly in connection with yellow fever. In passing I may note that he was an ardent non-contagionist, believing in its local or endemic origin. One

1817

of his arguments was that an essential feature of contagious diseases is that one attack is protective, and that yellow fever does not confer this protection. He claimed himself to have had attacks in August, 1795, and July, 1796, in both of which he had been successfully treated by his "illustrious preceptor," Dr. Benjamin Rush, and again in September, 1800, when he had been carried through a still severer attack by Dr. Ashton Alexander. Owing to these repeated illnesses he had been "doomed to lament a shattered constitution before the meridian of life."

The Standing Committee for publication of communications was authorized to publish Dr. Potter's work at the expense of the Faculty; 500 copies were accordingly printed, the cost being \$211.

It may be interesting to learn the reception of this work, the *opus magnum* of Dr. Potter's life and forming a conspicuous object in his picture at the University. Dr. Potter, it will be recalled, was one of the leading authorities of his day. It was placed with E. J. Coale, a bookseller of Baltimore, for sale at \$1 per copy, who reports on May 5, 1819, that of the 492 copies placed in his hands the previous October, Dr. Potter had received 42, 125 had been sold, mostly to booksellers at a discount, and 325 remained on hand.

The editor of the *Medical Recorder* speaks of the "Memoir on Contagion" as "an irresistible body of evidence in proof of the indigenous origin of yellow fever as well as a lucid and ingenious exposition of the legitimate and distinctive characters of contagion and infection."

A motion was adopted that the Secretary and a committee of two publish such portions of the Transactions of the meeting as should be deemed of interest to the Society at large. The committee consisted of Drs. McDowell, Baker and Macau-

MEDICAL AND CHIRURGICAL FACULTY

lay. A by-law was adopted requiring the sessions in future to be annual instead of biennial. Drs. Alexander and DeButts were appointed to coöperate with the Treasurer in investing the Society's funds. 1817

At this meeting a resolution was adopted "that a committee of five be appointed to take into consideration and digest the best and most eligible plan of instituting a fund or funds to be set apart and appropriated for the use, benefit and relief of widows and children of deceased members of this Society who may be in need of assistance, and that said plan be reported to the Faculty at the next stated meeting."

A resolution was adopted on motion of Dr. Potter to appoint one annual orator instead of two.

Dr. Tristram Thomas, of Easton, presented a report upon the diseases of Talbot County. Since his former report last December, he says, a change had taken place in the atmosphere influencing the prevalent type of fever and there had been more inflammatory action than they had been accustomed to find since 1812. In many cases repeated use of the lancet had been required; in others depletion by the bowel, stomach, skin, blisters, etc., had sufficed. Under these measures scarcely a case had terminated unfavorably. Smallpox had appeared in a distant portion of the district during the winter but its progress had been checked by the exertions of the members of the Society.

Dr. Ennalls Martin presided at this meeting with Dr. Patrick Macaulay as Secretary, and fourteen are reported to have been present.

1818. The annual meeting was held in Baltimore on the first Monday in June. There were delegates present from the Sixth District Medical Society, viz: Drs. James Harper, 1818

MEDICAL AND CHIRURGICAL FACULTY

1818 Robert Stevens and Robert Moore, Secretary. A report was also received from Dr. Tristram Thomas, President of the Sixth District Society. Dr. Thomas reports a successful recent meeting, better attended than usual. He says that very little had been done in vaccination in the district.

The New York Medical Society takes the lead in proposing a National Pharmacopœia and sends a circular to Dr. Patrick Macaulay, Secretary of the Faculty, on the subject. Drs. Alexander, McDowell, Potter and Baker were appointed a committee to meet in Philadelphia June 1, 1819, other delegates from different parts of the Union on the subject.

The Standing Committee appointed at the previous annual convention "to arrange and publish such communications as might be deemed proper to form a volume beg leave respectively to report that no materials of that description have been submitted to them." The report is signed by Drs. Potter, Owen and Hall.

Another committee, Drs. Potter, Macaulay and Alexander, appointed to ascertain who were legally members of the Society or Faculty, on the same date report a list "as correct as the nature of the subject will admit of."

1819 Dr. William Fisher became Recording Secretary and Dr. W. W. Handy was reëlected Treasurer. The Examiners were Drs. DeButts, Gibson, McDowell, Handy, Jennings, Readell, Macaulay, R. Goldsborough, Irving, Thomas, Reese and Morgan Brown. Dr. Patrick K. Rogers, of Baltimore, was elected orator for the ensuing year.

The name of T. P. Hall appears as Corresponding Secretary, the first mention of this office with which I have met. The districts of Baltimore, Allegany and Worcester and the Sixth Medical District, composed of Talbot, Queen Anne and Caro-

line Counties, having formed medical societies, each member of the same became a censor, *ex officio*.

The Board of Examiners of the Western Shore finds Mr. Painter, apothecary, South Street, incompetent and refuses him license, backed by the opinion of L. Martin that it should publish him if he persists in practicing.

The records of the terrible yellow fever epidemic of 1819 and 1820 ("A Series of Letters and Other Documents Relating to the Late Epidemic of Yellow Fever," etc., published by authority of the Mayor, Baltimore, 1820, pp. 211) give most interesting details as to the opinions of the Faculty and District Medical and Chirurgical Society, and of individual physicians, reports of cases, etc. The disease began at Smith's Dock, west of the Falls, the first case appearing on July 21. On August 14 the disease was reported at Fells Point, one mile east of Smith's Dock. On July 31 a meeting of the Faculty was held in conformity with a request of the Mayor in the Council chamber, Dr. J. C. White being in the chair and Dr. S. Baker, Secretary. After full deliberation on detailed reports made by each member present of his knowledge and opinion of the health of the city, it was unanimously resolved to report to the Mayor, that it was the sense of the meeting that there was nothing unusual in the condition of affairs; that the character of the prevailing diseases was mild, and that in number and extent they were below the average of healthy years; that only four cases of fever of particular virulence had occurred, exactly of the same nature as occurred every summer. Hence there was nothing to excite the apprehension of an impending epidemic. At the same time it was recommended that the operations of filling up the streets and docks with mud, then going on, should be discontinued, filth of every sort removed, stagnant water pumped

MEDICAL AND CHIRURGICAL FACULTY

1819

out of cellars, cavities containing refuse vegetable and animal matters filled, streets and gutters kept clean, etc. A meeting of the District Medical and Chirurgical Society of Baltimore (one of the seven district societies formed in accordance with the resolutions of 1807, and the special meeting of December, 1816) was held on August 23, and a committee appointed to inquire into the health of Fells Point and examine into the condition of suspicious streets, alleys, lots and wharfs, there and elsewhere throughout the city. As a result of this examination by a committee composed of Drs. Jennings, Potter, and Martin, the committee found such a deplorable condition of things as to excite astonishment that "the late considerable mortality" had not been greater. A terrible picture of rotting wharves, stagnant ponds and vegetable and animal decomposition in the made ground bordering along the water was reported. The further course of the disease left no ground for doubt that the city was going through an epidemic of yellow fever such as it had suffered from in 1794, 1797, 1800 and 1808, and of which sporadic cases were seen here every summer. On August 27, the City Council appropriated \$3000 for the expenses of the Board of Health. On August 28 the first formal announcement of the epidemic was made by the Board of Health, fifty cases having developed at Fells Point, with ten deaths. The physicians of the Point charged those of the city with concealing their cases and refused for some days to report their own cases and also to attend the convention of the Faculty. The reports were collected daily by two trusty messengers and thus 1016 cases were reported to the authorities only twelve of which were not traced to the Point. It was estimated that there were at least 1200 cases altogether with 300 deaths. It was noted that of those who visited the Point at night, almost every one contracted the disease, whereas

those who went thither only in the day escaped with impunity. This fact was accounted for by the concentration of the noxious vapors near the earth at night and their rarefaction by the rays of the sun and consequent innocuousness during the day time. One writer mentions the animalcular theory, but the mosquito is not suspected once. The inhabitants fled from the infected area and were lodged in tents provided by the State along the ropewalks; others found refuge in the hospitable houses in the upper part of the city or its suburbs and many fugitives resorted to mills, barns and even stables in the surrounding country. One hundred and forty-one were admitted into the City Hospital, of whom eighty-five died. Notwithstanding the money panic existing, abundant supplies of money, food and other necessaries were provided for the refugees by the inhabitants of the city and adjacent parts. Georgetown alone contributed \$700. The encampment continued fifty-three days, and it was not until October 30 that the refugees were notified that they might safely return to their homes. It was noted that the mortality was very small in those who were attacked after removal from the infected area and among the inhabitants of the tents and marquees, over a thousand in number. There was scarcely one who did not regard the epidemic as of local origin and non-contagious. Dr. Reese, who wrote an excellent monograph on the epidemic, believed that the miasm rose from the surface of the stinking ponds to the east of the city and was wafted to the Point by the wind. The treatment pursued was free bleeding, two to four pounds usually, with repetition in a few hours where relief did not follow; calomel, ten grains every two to four hours, aided by emetics, cathartics and blisters. The two first remedies were the stand-bys. Calomel was used in enormous doses by some practitioners, twenty to sixty grains or a teaspoonful even every

MEDICAL AND CHIRURGICAL FACULTY

1819 two hours for a day or more. Food was withheld entirely until the disease was gotten under subjection, and drinks were administered cold, usually molasses and water. The confidence of the authorities in the profession is shown by the application of a committee of the City Council to the District Medical Society, representing the Medical and Chirurgical Faculty residing in Baltimore, for their advice and counsel as to the causes and the most effectual means of preventing a recurrence of the epidemic. Under date of January 22, 1820, Dr. Ashton Alexander, President, returns an answer by order of the Society. The cause of the epidemic is referred to the decomposition of *vegetable* matters, as in a cargo of decaying vegetable substances; the disease is not contagious; habits and mode of living have nothing to do with its production except as predisposing causes by producing debility of system; it is recommended that there should be "at least one medical character" on the Board of Health and that the Board should have at command an energetic police vested with full powers to remove persons and property; the docks and wharves should be cleansed early in the spring, putrescible materials removed or covered over with clay and sand and then paved, an elevation being left in the centre for drainage, the object being to make a surface impervious to the noxious effluvia; stone facings for wharves are recommended in future descending to low-water mark; streets, lanes and alleys should be raised, drained, cleansed and paved; cellars should be prohibited in made ground or kept dry; heavy penalties should be inflicted on all persons who fill up low wet grounds with putrescent materials and all made grounds should be well raised and drained; the cove between the Town and Point is regarded as especially a prolific soil for the miasm and should be improved, filled and wharved as soon

MEDICAL AND CHIRURGICAL FACULTY

as possible; rigorous inspection of premises from March to November is urged; offal and impurities should be promptly removed from wharves and docks; strict quarantine should be enforced upon *cargoes*, not upon crews and passengers; public squares should be laid out, trees planted, etc. A singular recommendation is *that the laws restricting hogs running at large and the throwing of kitchen offal into the streets be repealed, as these animals destroy vast quantities of such matters which if suffered to undergo decomposition might become pernicious to health.* The report is signed by Ashton Alexander, President, and John B. Caldwell, Secretary. It is a most interesting document well worthy of perusal. 1819

In fact the whole conduct of the profession during this time of public tribulation is most commendable. The failure of the eminent gentlemen of the profession (Drs. White, Baker, Owen, Davidge, Donaldson, Jennings and others), who met at the City Hall at the summons of the authorities, to recognize the existence of the approaching epidemic on July 31, was only natural under the circumstances, yellow fever being then regarded as only an intense form of ordinary malarial or "bilious" fever. The conduct of the Mayor, Dr. Edward Johnson, a member of this Faculty, in this epidemic, was heroic and deserves monumental commemoration by the community.

1820. At the annual convention, Dr. Robert Moore, of Easton, succeeded his fellow townsman, Dr. Ennalls Martin, in the presidential chair, the latter having declined reëlection. Dr. Martin was of the opinion that all the officers should be from Baltimore. 1820

In 1821 Dr. George Frick was elected Secretary and the meeting was held at "Williamson's Hotel," eighteen members being present. 1821

MEDICAL AND CHIRURGICAL FACULTY

1822 In 1822 a prize essay of \$50 cash, or in the form of a gold medal, at the option of the successful competitor, was offered and a committee was appointed to determine the merits of papers, consisting of Drs. Potter, Alexander, Bond, Macaulay and Gillingham. This committee announced as the subject for the essay, "The Pathology and Treatment of Cholera Infantum." The prize was not awarded until 1826, when it was given to Dr. Samuel A. Cartwright, of Mississippi. The elaborate treatise presented by Dr. Cartwright was published in the *American Medical Recorder* (July, 1826). Meanwhile, since its first offer, the value of the prize had been doubled. Many essays were offered in competition.

Drs. Readel, Macaulay and John Buckler were appointed a committee to prosecute all graduates practicing in Maryland without a license (*Fed. Gaz.*, Aug. 25, 1822).

In this year the laws and by-laws governing the Faculty, together with a list of officers and members, was published by its order (John D. Toy, printer, corner St. Paul's Lane and Market Street). Dr. John Buckler was Corresponding Secretary. The Examiners were Drs. W. W. Handy, Readel, Buckler, Frick, Jennings, Macaulay, Gillingham, R. Goldsborough, E. Martin, J. Young, Handy, Irving and Tristram Thomas. It was announced that a district medical society had been organized by Talbot, Queen Anne's and Caroline Counties and the profession in other parts of the State were recommended to do the same and send each a delegate to the annual meetings.

Mention may here be made of a patent obtained from the Government by Dr. James Smith, this year. It was for "an improvement in the art of vaccination," and is probably the only patent ever granted in connection with this operation. The "improvement" consisted in moistening the crust and

MEDICAL AND CHIRURGICAL FACULTY

grating it upon small pieces of glass or ivory, to which it would adhere when dry and might thus be transmitted by letter to remote points. Dr. Smith speaks of the crust as "a cryptogamous plant of the order of fungi." The document is dated July 10, 1822, and is preserved in the archives of the Faculty. 1822

1823. The annual meeting was held at "Williamson's Hotel." The annual oration was delivered at the University at 10 a. m., on June 3, by Dr. Patrick Macaulay, who chose for his subject "Medical Improvement." His eloquent address, which is preserved in the Historical Society's Library, was thoroughly worthy of the occasion. Dr. Macaulay seems to have been a man of great decision of character and expressed himself with vigor and force. And there was need of independent utterance, for medical colleges were then multiplying at an alarming rate and the standard of medical education was suffering a collapse from which it did not recover for nearly three-quarters of a century. 1823

Dr. Macaulay uses the following language, which shows that the Medical School of the University was still regarded as organically connected with the Faculty: "As members of the same corporation, our medical college demands our coöperation and support as long as it gives encouragement and protection to native genius and bars its portals against the entrance of prejudice, presumption and ignorance."

1824. The annual meeting was held at "Mr. Barney's Hotel," on Light Street. Dr. Gillingham, the annual orator, was unable to be present owing to "a long and severe indisposition." 1824

The balance in the treasury was \$552.23¼; amount received from twenty-three licenses, \$230.

It was resolved that the physicians of the State be recommended to receive as students "those only whose classical

MEDICAL AND CHIRURGICAL FACULTY

1824 attainments and correct deportment qualified them for the profession of medicine." Also, that before being admitted as candidates for a degree, they should have read three years, attended two courses of lectures, and have read and studied a list of books enumerated in the resolution (*Amer. Med. Rec.*).

Dr. D. M. Reese, censor of the Third Ward, Baltimore, reports June 5 that Job Smith, the Indian Doctor, whose prosecution had been entrusted to him at the last meeting, had left the city. Another Indian Doctor, Dr. A. Martin, had taken his place, a very popular quack, making much money. The censors had notified him of his violation of the law and he had offered to leave the city.

1825 The meeting in 1825 was held at the University, showing a continued good feeling between the two institutions.

1826 In 1826 Dr. Robert Moore retired from the Presidency, being succeeded by Dr. Robert Goldsborough, of Centreville, Md., who held it for ten years. Dr. Wm. Fisher again became Recording Secretary. The Medical Examiners elected were Drs. Buckler, W. W. Handy, Jennings, Macaulay, Fisher, Donaldson, M. S. Baer, E. Martin, R. Moore, T. Denny, Irving and T. Thomas. The names of nineteen persons, admitted during the year, were published.

1827 In 1827 the meeting was held in the Athenæum. The Treasurer, Dr. Handy, reported balance in hand \$270.49½; \$320 had been paid in for licenses and seven shares of Union Bank stock had been purchased for \$528.50. Another prize of \$100 was offered, and thereafter annually it was continued until 1831, when the committee awarded it to Charles Caldwell, Professor of Institutes of Medicine and Clinical Medicine in Tran-

sylvania University, Lexington, Kentucky. The earlier title of it was "Diseases Incidental to Lowlands and Marshy Grounds in Maryland." Later this was changed to "The Nature and Sources of the Malaria or Noxious Miasm from which Originate the Family of Diseases Usually Known by the Denomination of Bilious Diseases; Together with the Best Means of Preventing the Formation of Malaria, Removing the Sources and Obviating their Effects upon the Human Constitution when the Cause cannot be Removed." This essay was published in the *American Journal of the Medical Sciences* for August, 1831.

This year was signalized by the founding in Baltimore of the Washington Medical College. Dr. Horatio Gates Jameson, a native of Pennsylvania, but a resident of this city for about twenty years and thoroughly identified with the community, a bold and original surgeon, a tireless student and investigator, and a prolific and graceful writer, was at the head of its faculty, which included five others, viz: Drs. Samuel K. Jennings, William W. Handy, James H. Miller, Samuel Annan and John W. Vethake. They secured a building on Holliday Street, near Saratoga, and at the end of the first year graduated twelve persons. Later they built the structure on North Broadway, now occupied by the Church Home and Infirmary. There appears to have been much jealousy entertained against Dr. Jameson, who had been thwarted of a position in the Faculty of the University, of which at one time he seemed to have a good prospect. Dr. Duncan Turnbull, the Demonstrator at the University, in 1826 published a pamphlet reflecting strongly upon Jameson. In 1828 this was republished with more aggravating charges by Dr. F. E. B. Hintze, a prominent practitioner in the city. Statements made in this publication impugned the professional and private standing of Dr. Jameson to such

MEDICAL AND CHIRURGICAL FACULTY

1827 an extent that he could not ignore them and accordingly he brought suit against Dr. Hintze in the courts. The account of the trial of this suit, which was published in the *American Medical Recorder* of January, 1829, shows that a great deal of bad feeling existed in professional circles here. The leading physicians were summoned. Dr. Jameson seems to have acted throughout in a dignified, dispassionate manner, in striking contrast to the conduct of his opponents. The result was a vindication for him.

With the founding of the college, Jameson also founded a medical journal, the *Maryland Medical Recorder*, the first number of which appeared in September, 1829.

1828 1828. Dr. Goldsborough, the President, was prevented by private matters from attending the annual convention, which was presided over by Drs. Jennings and Hopkins. There were fifty-five members present at the opening. Dr. Fonerden was elected Recording Secretary and Dr. R. S. Steuart orator for 1829. Dr. Handy, Treasurer, reported that \$300 had been received from licenses during the year and \$390 from dividends on the bank stock, making with previous balance, receipts, \$811.70; expenditures, \$56.87½, leaving a balance on hand at the date of the report of \$754.82½. The Committee on Prize Essay reported that but one essay had been presented, which had subsequently been withdrawn by the author.

The question of the recognition of college diplomas came up at this meeting. The Examining Board of the Western Shore had voted March 17, 1828, to recognize the diplomas of the "Washington Medical College of Pennsylvania, located in Baltimore," and to refer the whole question of diplomas to this convention. Dr. Potter moved that the Examining Board con-

CHARLES F. WIESENTHAL

1726-1789.

MEDICAL AND CHIRURGICAL FACULTY

sult the Attorney-General as to the legality of the diplomas of this college. After further discussion the matter was decided by a motion of Dr. Baxley that the Board of Examiners should subject all persons applying for license to examination, which was adopted by a vote of 26 ayes to 16 nays.

1828

The following note is preserved in the archives: Baltimore, June 21, 1828. Communication from Dr. M. S. Baer, Secretary of the Board of Examiners, to Dr. Fonerden, Secretary of the Faculty, conveying a resolution adopted by the Board, "That the Secretary of the Medical Faculty be directed to grant licenses to all persons presenting diplomas from the University of Maryland issued before the date of the convention of the Faculty of June, 1828, on payment of the customary fee," and also notifying him that Dr. Wm. Donaldson had been elected Chairman of the Board of Examiners.

1829. On April 8 the Board of Examiners requests the Secretary of the Faculty to notify all persons applying for license to practice to appear before it before license be granted.

1829

The committee on prize dissertation (subject, "Causes and Treatment of Typhus Fever") reports that neither of the two papers presented had been judged worthy of the prize. The report was signed by Drs. Potter and Thos. E. Bond, Committee.

There is an undated note in the MS. archives that "objection was made by one of the prize essayists that justice had not been done him," and a new committee of five—Tristram Thomas, Wroth, Denny, Sykes and G. T. Martin—was appointed to report at the next convention. This doubtless refers to the above report. The objector was probably Dr. Baxley. See proceedings of 1830.

The annual oration was delivered at 5 p. m. on June 1 by

MEDICAL AND CHIRURGICAL FACULTY

1829 Dr. Steuart, his subject being "The Nature and Phenomena of the Nervous System." Dr. N. R. Smith was selected as orator for 1830. A loan of \$300 was made to a Mrs. Middleton at legal interest. Of its nature I know nothing. It was renewed in 1830 on the same security.

On October 30, 1829, Dr. W. B. Tyler writes from Fredericktown, asking a certificate that James Ligget is not a member, as he and Dr. Baltzell, censors, will again renew their efforts to convict this obstinate offender. They had been cheated out of a hearing before, which made it necessary to renew proceedings. He suggests that the seal be attached to the certificate to meet possible objections. The name James Ligget appears as an M.B. of the University of Maryland, 1827. Dr. Ligget claims the right to practice by virtue of this degree.

1830 1830. The fees from licenses received through thirty years now amounted to several thousand dollars, nearly all of which was invested in bank stock. At the annual conventions it became often a topic of general conversation how these funds could be used so as to answer best the objects proposed in the charter. Everything had been done that was possible "to prevent the citizens from risking their lives in the hands of ignorant practitioners or pretenders to the healing art," but could the same be said with regard to "promoting and disseminating medical and chirurgical knowledge throughout the State?" An enlightened and far-seeing member of our body did not think so and at the annual meeting of 1830, Dr. Samuel Baker, of Baltimore, offered the following resolution:

Resolved, That a committee of five, to be called a Library Committee, be appointed to purchase such periodical and other standard works in medicine as they may deem proper, to be placed in some suitable situation for the use of the members

of the Medical and Chirurgical Faculty of the State; and that this committee be authorized to draw on the Treasurer for an amount not exceeding \$500 for the purpose above-mentioned, and that this committee report at the next meeting of the convention. It is also made the duty of this committee to draw up such rules and regulations as may be necessary for the safe keeping and management of the library so procured. Committee: Samuel Baker, Peregrine Wroth, Wm. W. Handy, John Fonerden and H. W. Baxley. Resolution offered by Dr. Baker, appropriation on motion of Dr. Jennings" (MS. archives).

The convention being well attended, the resolution was thoroughly discussed, and to the gratification of its friends it met with no opposition that did not finally yield to a conviction of its practicability and usefulness. It was triumphantly carried and "thus was laid the foundation of a collection which by a liberal annual appropriation out of the dividends of the bank stock became in a few years a very valuable treasure-house of ancient and modern authors." Dr. Baker continued as chairman of the committee up to the time of his death in 1835, giving to the enterprise his earnest and zealous support.

Little had been done previously to this towards any public collection of medical books in Baltimore. In 1808 the *Baltimore Medical and Physical Recorder* announced that the public city library contained "no inconsiderable collection of books upon medical subjects." In 1813 the Faculty of the University of Maryland bought from Dr. John Crawford's widow the library of that physician, then recently deceased, amounting to several hundred choice books.

Dr. Fonerden was appointed librarian at a salary of \$100 per annum. Large donations of books were made by members of the Faculty, Dr. Fonerden taking the lead. Among other contributors appear the names of Drs. Geddings, John H. Bris-

1830 coe, George S. Gibson, Knight, Dunglison, Cohen, J. P. Cockey, Harrod, Alexander, Jennings, Frailey and J. B. McDowell and Messrs. John and Joseph Neale. Dr. Jameson donated the entire exchange list of the *Maryland Medical Recorder*. The addition of old authors was left to the liberality of the members, while the appropriation (amounting in the first decade to about \$300 per annum) was reserved for the purchase of new books. Among rare old authors contributed to the shelves were editions of Hippocrates, Aretæus, Ætius, Paulus, Oribasius, Actuarius, Celsus, Scribonius, Marcellus and others.

For some years the library continued to be the pride of the members, serving as a bond of union and a centre around which they could rally. Where it was kept at first we do not know; probably at the house of some member. In 1835 we find that Dr. Chew was librarian and the announcement was made that it would thereafter be located at his residence on Lexington Street. A notice in the *American* in 1840 shows that it was then located at Dr. Chew's office, "88 N. Howard Street, east side, between Saratoga and Mulberry," and he was still in charge of it. The first catalogue was printed in 1833. Another issued two years later contains 569 entries, showing that to be the number of volumes in the collection at that date. Additional entries to the list made in writing carry the number by 1840 to 979.

This small catalogue of 1835 with interleaved additions is in the Surgeon-General's Library at Washington. It is a leather-backed book $6\frac{1}{2} \times 4\frac{1}{2}$ inches and was printed by John D. Toy, Baltimore.

"The existence of such a collection," says Dr. Fonerden, Chairman of the Library Committee (*Md. Med. & Surg. J.*, vol. i, 1839) "as the catalogue of this library announces to be

at the command of the members of the corporation throughout the State, is one of the results of the care with which the Faculty has endeavored to use its funds, wisely for a permanent diffusion of medical and surgical knowledge." And the author of the memoir of Dr. Samuel Baker, in the same journal, says that the collection was already "perhaps more select and rich in value for its size than any other in the country."

The report of the Library Committee, presented at the opening of the hall on Calvert Street in 1858, by Prof. George W. Miltenberger, shows well some of the good accomplished by it, and that the care and interest bestowed on it and its growth and prosperity were at once the evidence and gauge of the activity and prosperity of the Faculty itself. "The older members of the Faculty must well recollect," says this report, "that for many years the library was the great tie which bound them together, and was for a considerable period one of the strongest inducements afforded, wherein we derived the main part of our revenue by the addition of new members. While it afforded facilities to many not otherwise easily obtained, it was a just matter of pride to the whole Faculty, who as long as their funds remained unimpaired evinced their appreciation of its usefulness by the liberal appropriations yearly made for its maintenance and increase. * * * No one can deny that the coolness manifested towards the library corresponded with the darkest period of our history and that from the time when its increase ceased to be a main object of consideration, there has been a less active spirit actuating our body and a greater difficulty in recruiting our ranks. The most feasible plan to draw the profession into the Society appears to us to be a return to our old faith and habits of a firm resolve to render the library sufficiently valuable to offer attractions to all our brother practitioners."

MEDICAL AND CHIRURGICAL FACULTY

1830 Other matters of interest in this year require mention. A resolution, also by Dr. Baker, was passed establishing a Vaccine Agency, and Dr. William Zollickoffer was put in charge of it. The sum of \$100 was to be awarded to him provided he should sustain a vaccine institution in this city for one year from date and should conduct the same to the satisfaction of the Faculty, so that the members could at any time within that period be furnished with vaccine matter at not over two dollars per crust. From the fact that the incumbent resigned at the end of the year and that the resolution was then annulled, the presumption is that the project had not worked satisfactorily. The Treasurer reported the receipts, balance and assets for the year as \$817.97, expenses \$306.62½, leaving a balance in the treasury of \$511.34½. The receipts from licenses had amounted to \$230.

The Chairman of the Committee on Prize Essays reported that the same essays as in last year had been resubmitted but no award had been made. One of the rejected essays was by Dr. Baxley.

According to Dr. Jameson, there were in Maryland at this time about 600 physicians, all members of the Faculty. In Baltimore there were about 100. Population of the State, 447,040; of city, 80,625.

1831 1831. Dr. James H. Miller was the orator, delivering his oration at 5 p. m. of the first day's session. Dr. Fonerden was selected as the orator for the ensuing year. The Treasurer reported receipts (including dividends on bank stock and \$340 for licenses) as \$1239.80; expenses, \$641.75; balance on hand, \$598.05. On motion of Dr. Baker each member using the library was required to pay \$1 annually.

MEDICAL AND CHIRURGICAL FACULTY

A committee, A. Dunan, chairman, appointed by the censors to prosecute graduates of the University of Maryland who were practicing without license, reported that after various interviews with a committee of conference appointed by the latter, they had employed Mr. John V. L. McMahon as counsel for the Faculty and suit had been instituted in the Baltimore County Court to decide the question in the fall. 1831

There is in the archives of the Faculty a MS. resolution proposing for the sake of harmony between the Medical and Chirurgical Faculty and the University of Maryland that the Examining Board of the Western Shore be composed of five physicians of Baltimore not connected with the Faculty of the University and of two members of that Faculty. There is no statement as to when or where it was offered or whether it was passed or not.

A motion to pay Dr. Zollickoffer \$100 for his services as Vaccine Agent was lost. An arrangement was entered into with Dr. O'Brien for the ensuing year of the same nature and upon the same terms that had been offered to Dr. Zollickoffer. Dr. Jameson offered a resolution appointing a committee to collect cases and facts for publication, which was adopted.

1832. The annual convention was held June 4 in Baltimore, thirty-one members attending the opening meeting including the President, Dr. Goldsborough. The Recording Secretary, Dr. Fonerden, was elected orator for 1833. The Treasurer reported a balance on hand of \$523.35. Dr. O'Brien received \$100 as Vaccine Agent for the past year, a committee having reported favorably on the institution conducted by him under the auspices of the Faculty. The appropriation was renewed upon the same conditions for the next year and a resolution ordered to be published recommending the institution to the 1832

MEDICAL AND CHIRURGICAL FACULTY

1832

patronage and confidence of the profession. A committee was appointed on motion of Dr. Baker, seconded by Dr. Fonerden, to report "on the expediency of procuring a permanent situation for the accommodation of the convention." For the Library Committee Dr. Baker reported that 274 volumes had been imported during the year. With others ordered the total in the library would be 343 volumes, many probably not to be met elsewhere in this country. The collection was already "much appreciated." On motion, \$300 were appropriated for the use of the library, and \$100 for librarian's salary.

An interesting event should here be noted, which was the origination in July, 1832, of one of the first *Codes of Medical Ethics* devised in America, by the Medico-Chirurgical Society of Baltimore, an association founded about 1830, by Dr. Samuel Baker. Dr. Baker was also the first President of this association, and with Drs. Maxwell McDowell and Thomas H. Wright formed the Committee of Honor which drew up the code. This same society drew up the first fee table in Maryland, which was later (1848) adopted and published by the Medical and Chirurgical Faculty.

During the summer and fall cholera prevailed throughout the country and with other cities it visited Baltimore. The first case reported in the city was on August 4, although Dr. Jameson had seen a case which he regarded as cholera as early as February 19. The deaths from the disease numbered 853, or one in 96 of the population. The City Council appropriated \$40,000 for the uses of the Health Department. Three public hospitals were opened. There is no record of any official action taken by the Faculty, which was indeed unnecessary, as the city had a strong medical Board of Health, headed by Dr. Jameson. Among the deaths was that of Dr. John Cromwell,

MEDICAL AND CHIRURGICAL FACULTY

founder (see Historical Sketch of this epidemic in Jameson, *Md. Med. Rec.*, vol. iii, No. 1, July, 1832).

1833

1833. The annual meeting was held June 3, thirty-three members being present at the opening, including the President, Dr. Goldsborough, Recording Secretary Dr. Fonerden and Corresponding Secretary Dr. Baxley. Professor E. Geddings, of the University of Maryland, was elected the orator for 1834. The Treasurer's report was as follows:

| | |
|---|----------|
| Balance from previous year..... | \$537.65 |
| Dividends from Com. and Farmers Bank..... | 51.20 |
| " Bank of Baltimore | 18.00 |

| Etc., etc. | 49.72 |
| | <hr/> |
| | \$549.72 |

Balance in Treasury, \$394.13.

The Committee on Permanent Room asked for further time. Dr. Samuel Baker, Chairman, presented the report of the Library Board. The \$300 appropriated at the last annual meeting had been invested in the purchase of books. A small edition of a catalogue had been printed and was now ready for distribution. It was proposed to issue an annual supplement until a new edition was demanded.

MEDICAL AND CHIRURGICAL FACULTY

1833

“The establishment of your library has already been attended with great advantages to a number of zealous cultivators of medical science; and they entertain a belief that at some future day many learned teachers and authors who may adorn our State will acknowledge themselves indebted to your wisdom and liberality for facilities enjoyed by them in the prosecution of their researches through the formation of your useful library” (Lib. Com. Report, 1833).

An appropriation of \$200 was made to the library for the ensuing year.

Dr. Peregrine Wroth writes from Chestertown, November 13, 1833, regarding trials of persons charged with practicing illegally. He says that in obedience to instructions received from Dr. Baxley, Secretary of the Faculty, Drs. Brown, Crane and himself had caused several individuals to be indicted. General Chambers had been employed to assist the State's Attorney in the prosecution. The accused were all Thomsonians. In the first case two were convicted by the jury but had gotten off, the court adjudging the indictment defective as it failed to set forth that the accused had not practiced prior to the act regulating the practice of medicine. This is the first intimation of opposition on the part of this sect, which was the cause of so much trouble a few years later. An item of \$150 paid E. F. Chambers, December 7, 1833, evidently refers to the above suit.

1834

1834. The annual meeting was held as in the two previous years at the Athenæum on St. Paul Street, thirty-two members being present. The Committee on the Treasurer's Accounts reported expenditures for the year \$972.42½, leaving a small balance of \$1.55½. Prof. Eli Geddings, of the University, was the orator. Dr. Samuel Annan was chosen to deliver the next oration. Dr. Fonerden withdrew from the office of

MEDICAL AND CHIRURGICAL FACULTY

Recording Secretary and was succeeded by Dr. R. A. Durkee. Dr. Handy declined a reelection as Treasurer and was succeeded by Dr. Edrington, who, objecting to giving security, was excused from this requirement. An appropriation of \$100 was voted for the salary of the librarian (Dr. Fonerden) and \$200 were voted for the purchase of books. The librarian was directed to have printed a supplement to the Library Catalogue.

1834

A letter from Dr. Peregrine Wroth, of the Eastern Shore, was read, giving an account of the prosecution of several illegal practitioners there.

1836. A committee was appointed to conduct a series of experiments with vaccine and variolous matter. On Dr. Dunbar's motion a second committee was appointed to prepare for the next annual meeting "A Review of the Progress of Medicine and Surgery." The reports on the latter subject were made for many years by Dr. Dunbar, who claimed that this Society was the first in America to adopt such a system of annual reports.

1836

Some insight into the affairs of the Faculty at this time is given by Dr. Robley Dunglison in his journal, *The American Intelligencer and Medical Library*, which he began in Philadelphia at the close of this year. Having been engaged in teaching in Baltimore for the previous three years, it would seem that he ought to have been correctly informed upon the condition of the profession in this city during that period. "In Maryland as in Massachusetts," he says, "the unlicensed practitioner cannot recover, but is subjected to heavy penalties and prosecution. It has been decided, however, of late, by the Court of Appeals of the State, that a diploma from the University of Maryland is a State license and therefore her alumni are exempt from the demand. The annual meeting takes place the

MEDICAL AND CHIRURGICAL FACULTY

1836 first Monday in June, and an annual orator is appointed for this occasion. The meetings, however, are not attended with the same zeal as those of the Massachusetts Medical Society, the business concerns of the Faculty being generally left to the management of a few members. The library already possesses upwards of 600 volumes, the production of some of the best authors in the different departments of the science. Not long ago an application was made by Thomsonians and the Legislature of Maryland to permit them to establish an infirmary within the State and to teach medicine uncontrolled by the Medical and Chirurgical Faculty, but it was rejected."

Dr. Maxwell McDowell, of Baltimore, was elected President of the Faculty.

1839 1839. This was an *annus memorabilis* in many ways. There were committees appointed on the "erection of a medical hall [the first mention of this subject in the annals] on experiments with vaccine and variolous matter and the grease of horses," and "on review of progress and improvements in medicine and surgery." Provisional delegates were appointed "to a National Medical Convention whenever convened," and the formation of county medical societies in affiliation with the State Society was urged. After due and deliberate reflection the Faculty determined to publish a journal and a committee was appointed to edit it, consisting of Drs. G. C. M. Roberts, Nathaniel Potter, James H. Miller, Robert A. Durkee, John R. W. Dunbar and Samuel George Baker. This work was successfully put on foot and the first number appeared in the ensuing October, its full title being *The Maryland Medical and Surgical Journal and Official Organ of the Medical Department of the Army and Navy of the United States. Qui ante nos ista moverunt non domini nostri sed duces sunt. Patet omnibus veritas; non-*

MEDICAL AND CHIRURGICAL FACULTY

dum est occupata; multum ex illa etiam futuris relictum est. Seneca, Epis. 33."

1839

In their address to the profession the committee say: "The Medical and Chirurgical Faculty of Maryland, at its annual session in the month of June, after due and deliberate reflection, having determined that a journal devoted to the interests of medical science was needed in this city and State, appointed the undersigned a committee to superintend the issuing of such a periodical. With a regularly and legally organized Faculty throughout the State, numbering in its ranks members in no point behind those of our sister States in their attachment to the profession of their choice, talent to sustain its interests, diligence and zeal in meeting the claims of the public upon them, with a city containing its six hospitals and two colleges, all in course of successful operation, and facilities for the examination of disease in all its varieties quite as extensive as those in other communities, the committee have entered upon the discharge of the arduous duties devolving upon them as the conductors of this journal, animated with the prospect of success. We have done so by no means unaware of the vast amount of labor attendant upon and the host of difficulties which surround such an undertaking. We feel indeed that in the midst of the multitudinous engagements which throng us individually, in the pursuit of our profession, we are unprepared to discharge as faithfully as should be, the claims now upon us. Having, however, been called to the post we occupy, not by choice or seeking, but by the unanimous suffrage of our brethren who have thereby given us the assurance of their continuance and support in our labor, we could not shrink from the call. Of our individual talent for the work we can say nothing; our paper must speak for us in this particular. We, however, pledge our best ability to sustain the undertaking

1839

until those who called us to the post shall have an opportunity to pass upon our work, and either continue us in the relation we now hold to them or supersede us by the appointment of others better qualified to meet their views and wishes. We cheerfully undertake the duties imposed upon us because we believe that we shall not be left to contend single-handed for the object in view. Having a claim for assistance upon our brethren throughout the city, State and United States, we doubt not *they will as promptly meet that claim, as we have pledged ourselves* to our work. To them we now make our appeal, confident that it will be responded to with promptness and the pages of our ensuing numbers enriched by their contributions.

“Our course shall be fair and open; our object and desire is to afford another medium through which our junior members, in association with their aged and more experienced brethren, may have an opportunity of spreading before the public the result of their labor and reflections.

“We hope to be able to give, in addition, such a digest of all foreign and domestic matters in connection with the science, as will be alike pleasing and profitable.

“We have done. Our appeal, in company with the first number of our work, is now before you. We commend them both to your interest and favor.”

The journal, which in form was a small-sized octavo, appeared quarterly. An examination of its pages will show that it was printed in the very best style and was remarkably free from typographical and other errors. It was also ably edited and the contributions were of a high degree of excellence. Among the contributors, for instance, to the first number were Potter, Baker, Jameson, Power, Buckler, Dulin, Hall, Aikin, Mutter and others. The Army and Navy contributions added greatly to the value of the work. In the second number there appear

nineteen original papers, the largest number published in a Maryland journal up to that date. The last issue of this journal, at that time under the editorial care of Drs. Roberts and Chew, was in March, 1843. There had been no falling off in the ability or vigor of its management, and it is quite evident that the failure of adequate pecuniary support was the main element of its premature decease.

If one might suggest, it seems to the writer that such an enterprise can only be a success if conducted in a thoroughly business way. It must have an energetic business man at its head, who will study to make it of use to the public and thus provide other sources of revenue besides the small fund which comes from subscriptions. Equally important is the securing of a thoroughly competent editor, tactful, vigorous, intelligent, who can deal with the questions of the day. Essential, I consider it, that such a man should be adequately compensated for his time and services, so that he can devote himself without disquietude to his editorial labors. The idea of reviving the *Journal* has been suggested on more than one occasion, even within the recollection of the writer, and it is not unlikely that it may yet some day become a reality. Should that happen, the above suggestions are offered by one who has thought much over the matter and has had some experience in it.

Shortly before this evidences appear of the activity in this community of some one or more followers of the "Thomsonian or botanic" class of practitioners, a sect in medicine founded by one Thomson, a native of New England. One of the leading principles of their doctrine was that the human body was composed of four elements (?)—earth, air, fire and water. By these pseudo-philosophers metals and minerals were regarded as having the tendency to draw all who use them down into the earth, this view being founded upon the convincing fact that

1839

they are found only in the depths of the earth. On the other hand, since vegetables spring up out of the dross and vulgar earth into the air, they tend to raise men away from the grave. The sect had a brief season of success, as many another false and absurd practice has, but the want of any real merit in it, the gross ignorance of its followers and the violence and even fatal effects of the powerful doses of herbs which they employed, led in a short time to its dissolution. In 1833 there was published in Baltimore a 12mo book, bound in sheep, with the title "Families' New Guide to Health; Together with an Exposition of the Thomsonian Preparations of Medicine." Some years later, as has been stated, an unsuccessful attempt was made to induce the Legislature to permit the establishment within the State of an Infirmary and the teaching of the system uncontrolled by the State Faculty. The promoters of the system persevered, nevertheless, in their efforts, and they finally had the address and influence to control legislation in the State and obtain from the Legislature the passage of an Act (Chap. 28, 1838-39), entitled "An Act to Authorize Thomsonians or Botanic Physicians to Charge and Receive Compensation for their Services and Medicine." This Act was a virtual repeal of the charter of the Faculty and was the most critical event in its history up to that time, depriving it of its chief privilege and function, which it had, unquestioned, exercised for the benefit of the community for forty years. Its importance seems to have been recognized at the time and subsequently. "It deprives this Faculty of such of its functions as are essential to its vitality" (report of committee, Roberts and Cohen, 1854). But a spirit of supineness and lethargy seemed to seize hold of the entire body which even the sense of self-preservation failed to banish. We do not learn that any representative of the Faculty attended the session at which this great

injustice was perpetrated, or that any protest was uttered at the time against it. No attempt was made to test its validity in the courts or to assert the rights which had been solemnly conferred by the charter of 1799, a charter obtained after so many years of painful and eager longing and which now as with a besom of destruction was swept away in an instant carrying with it the fairest hopes of the profession. Years after, an attempt was made by a few noble spirits led by Roberts and Cohen, but they received no backing and it resulted in dismal failure. The late Dr. John R. Quinan, than whom a more devoted and disinterested lover of his profession has never adorned the annals of Maryland, investigated the matter in all its legal bearings and laid his results before the Faculty in his elaborate presidential address of 1886. As throwing light upon the history of the State, and in justice to Dr. Quinan's memory and services, the matter cannot be dismissed without further allusion to his paper.

He points out that there is a discrepancy between the title and body of the Act, the latter saying nothing whatever about Thomsonians or any other special class of practitioners, the language being, "It may and shall be lawful for each and every person being a citizen of this State to charge and receive compensation for their services and medicine in the same manner as physicians are permitted to do." The author of this Act, so destructive to the best interests of citizens, so obstructive to progress and so degrading to the intelligence of this community, ought to be published and branded with the eternal infamy he deserves! Dr. Quinan shows very conclusively that it is a point well established and beyond controversy that an Act of the Legislature of Maryland must be construed according to its title, and hence that the Act in question excepts no one but Thomsonians or botanic physicians. As these no

1839 longer exist, the law is imperative, and as there is no other legislation upon the statute books repealing the Act of 1798, the conclusion is that that Act is still in force as fully as it ever was. Further, by reference to decisions of the Supreme Court, he shows that chartered rights are inviolable and that the Legislature in depriving the Faculty of any part of its rights under the original charter was going beyond its power. The reasoning and facts of our late eminent colleague are incontrovertible, and I quote the concluding words of his earnest but fruitless plea: "And now, gentlemen, in closing, let me say that if after a full examination and deliberate discussion of this question, you decide as I do, that our chartered and vested right to require licenses from all who desire to practice medicine and surgery in this State, exists to-day in all its integrity, unimpaired by legislation, unrevoked by judicial decisions, as it did on the day it was granted, eighty-seven years ago, then I adjure you by your own regard for your own highest professional interests; by your regard for the honor, dignity and moral elevation of your calling; by your respect for the example of your brethren in other and adjoining States who have successfully driven from their borders the hordes of harpies who were fattening on the credulity of the people; by your regard for the ancient reputation of this venerable Faculty and the restoration of that vigor of which it has been so long shorn by the Delilah of supineness and neglect; by your regard for the lives and sanitary welfare of the community—by each and all of these considerations, I adjure you boldly and manfully to assert and enforce your vested rights and at once and forever clean out the Augean stable of charlatanism and quackery."

The blow which had been inflicted by a recreant Legislature soon began to show its dire effects. Physicians, whether grad-

uates of the Maryland schools or not, no longer submitted to examination or procured a license. But few members joined and the sources of revenue were dried up. It seems strange that notwithstanding this result, which might have been foreseen, the Faculty should within a few months after the passage of the fatal Act, have voted to publish an expensive journal. Can it be that the members expected the *Journal* to be a money-making enterprise, or to make up in some other way for their loss?

In this year was founded the Baltimore College of Dental Surgery, the first institution for the education of dentists ever established. Since early in the century instruction had been given to dental students in Baltimore by Dr. Horace H. Hayden, a gentleman of rare scientific attainments and it is said that lectures had been delivered at the University of Maryland by him upon this subject in 1837. Dentists had been licensed by the Medical and Chirurgical Faculty and the writer has seen one of these licenses, that of Dr. Hayden in fact, but having no date. The founders of the school first endeavored to engraft it upon the University as a separate department of the same. Being unsuccessful in this, doubtless owing to the unsettled condition of the latter, which had shortly before this been rent in twain and was but just emerging from a nearly fatal lawsuit, they boldly launched out upon the untried sea, with an independent school. Their immediate and marked success shows that this effort was opportune and that they supplied a real want. The first Faculty of the College were Drs. Hayden, Baxley and Thomas E. Bond, Jr., and to these were shortly afterward added Dr. Chapin A. Harris, all being members of the Medical and Chirurgical Faculty.

The movement which led to the founding of the Maryland College of Pharmacy also originated in this year. Prof. Wm.

MEDICAL AND CHIRURGICAL FACULTY

1839 Fisher, a distinguished chemist and incumbent of that chair at the University, 1837-39, devised the plan for it in the spring of 1839, when he was stricken down with hemiplegia. Dr. Thomas Buckler seconded the proposal and urged its importance in the first number of the *Journal*. At the annual meeting held the following year, June 1, 2, 3, 1840, a committee was appointed to plan conjointly with a number of pharmacists, an organization, and report at the next meeting. The agitation of the subject, although without immediate results, was not fruitless since we learn from the MS. records of the University (Historical Sketch of Univ. of Md., by the author, p. 113), that a college was organized and a cabinet of specimens collected. A chair of Practical Pharmacy was instituted and lectures were annually delivered at the University, from 1844 to 1847. The college was incorporated on the twenty-seventh of January, 1841. After a cessation of some years, the lectures were resumed in 1857, and have been given without further break up to the present time. From 1858-61 the College occupied the Hall of the Medical and Chirurgical Faculty, No. 47 North Calvert Street, and during this period issued a quarterly journal and transactions. It has now a fine building on Aisquith Street, and stands among the very best institutions of the kind in the United States.

At the annual meeting \$291.30 were reported as collected in dividends on the stock owned by the Faculty. Twelve new members had been added during the year.

1840 The convention of 1840 was held in the saloon of the Law Building, corner of St. Paul and Lexington Streets, on June 1, 2 and 3. Dr. Stephen Collins was elected orator for the next meeting, and the usual appropriation of \$300 was voted to the library.

Dr. Cohen, Treasurer, reports receipts and expenses each \$295.40, leaving a balance due the library from the appropriation of the year before of \$225.56.

1840

Committees were again appointed (1) on "Experiments with Vaccine and Variolous Matter and the Grease of Horses," (2) on "Review of Progress in American and Foreign Medicine and Surgery," (3) to represent the society at National Medical Convention, (4) Editorial, (5) to plan an organization of a College of Pharmacy.

A semi-annual meeting was held in November, in the Chemical Hall of the University.

On December 15, 1840, the Finance Committee was compelled to borrow from bank \$450 for six months, to meet the demands of the publisher of the *Journal*, hypothecating thirteen shares of the Faculty's stock as security, the President also making himself individually responsible. This loan was renewed several times and was not paid until September 4, 1843.

At the meeting of 1841, Dr. Maxwell McDowell was reelected to the presidential chair for the fifth time but declined and was succeeded by Dr. Joel Hopkins. The cash on hand was \$103.04.

1841

The Editorial Committee reported that the *Journal* had 250 subscribers. At the last annual meeting the amount due Mr. Murphy, publisher, and others, had been \$1148.49. \$316.50 had been received by Mr. Murphy in subscriptions up to the issuing of the fourth number of the first volume, making the total amount received by him \$753, "which deducted from the whole amount of his account leaves a balance *now* due him of \$395.49 to be provided for at the present meeting. After due reflection and repeated conference the committee have decided

MEDICAL AND CHIRURGICAL FACULTY

to continue, and with difficulty have concluded a written contract with M. for the second volume."

1842 The meeting of 1842 was held at the new Assembly Rooms, corner of Holliday and Fayette Streets, on June 6, the attendance varying from twenty-five to forty-five. The amount in the treasury had sunk to \$37.94. Four licenses only had been granted during the year. The Faculty owed now \$195.45½ on vol. i and \$200 on vol. ii of the *Journal* and a note of \$450 borrowed on the same account; \$200 moreover had been pledged to meet deficiencies, making a debt on the *Journal* alone of \$1045.49. The Society seemed to be getting involved, but it was determined to go on with the *Journal*.

A change of the Faculty's investments was made at this time. The thirty-six shares of Commercial and Farmers Bank and one share of Bank of Baltimore were disposed of and the proceeds reinvested in City six per cent stock, a measure which the members had reason to congratulate themselves on. After this change the investments of the Faculty consisted of \$1375 worth of City 6's, five shares of Farmers Bank of Maryland, thirty-two shares of Union Bank, thirteen of which had been hypothecated to the Savings Bank of Baltimore as security on the note of \$450.

An adjourned meeting was held on June 10. The library was removed the same month to the quarters of the Maryland Bible Society, where a room for it and the services of a librarian were secured.

1843 1843. The annual convention was held at the Assembly Rooms and was attended by thirty-five members. No new members had been admitted during the year. There was a balance on hand of \$79.49½. The Executive Committee

MEDICAL AND CHIRURGICAL FACULTY

1843

reported that after the most strenuous and repeated efforts it had failed to secure an orator. The Editorial Committee, Drs. N. R. Smith, Roberts, Chew, Durkee and Dunbar, reports the number of subscribers to the *Journal* as 231, located chiefly in Baltimore and Maryland, and recommends that it be continued. Dr. Dunbar read the report on Surgery. A joint committee appointed June 5, consisting of the Library Directors and a special committee, to examine and report the debts of the Faculty and the means at hand for paying the same, brought in the following report on the succeeding day:

DEBTS.

| | |
|--|----------|
| 1. Note due at Merchants Bank contracted for the <i>Journal</i> | \$450.00 |
| 2. Balance due Mr. John Murphy, first and second volumes of <i>Journal</i> , not over | 200.00 |
| 3. Balance due to Maryland Bible Society for use of library room and services of librarian..... | 72.00 |
| 4. Balance due Dr. G. S. Gibson, Treasurer of library | 2.84 |
| 5. Secretary's bill for contingent expenses..... | 3.50 |
| | <hr/> |
| | \$728.34 |

ASSETS.

| | |
|--|------------|
| 1. City stock, 6 per cent, cash \$852.50, now worth.. | \$1375.00 |
| 2. Union Bank stock, 32 shares, par value \$75, pres- ent value \$56 a share..... | 1792.00 |
| 3. Farmers Bank of Maryland, 5 shares, par value \$50, present value \$33 | 165.00 |
| 4. Cash in treasury | 79.49½ |
| | <hr/> |
| | \$3411.49½ |

leaving Faculty worth \$2683.15½.

MEDICAL AND CHIRURGICAL FACULTY

Estimate made of probable receipts and expenses for year :

1843

PROBABLE RECEIPTS.

| | |
|---|----------|
| Interest on stocks | \$215.00 |
| Annual contributions of \$1 to library..... | 28.00 |
| | \$243.00 |

PROBABLE EXPENSES.

| | |
|---|----------|
| Interest on note at Merchants Bank..... | \$27.00 |
| Interest on \$200 due Mr. Murphy..... | 12.00 |
| Insurance on library | 6.75 |
| Taxes on stock | 7.44 |
| Contingent expenses of Secretary and renting room, etc. | 33.00 |
| Present expense of librarian and library room..... | 100.00 |
| | \$186.19 |
| Balance in Treasury | \$56.81 |

leaving nothing for enlargement of library.

The committee presented two resolutions, (1) to remove the library and place it under the care of a member of the Faculty, if an arrangement can be made without expense for room and services of a librarian; (2) to pay quarterly out of any unappropriated funds \$30 to Library Directors for the purchase of books. By the first resolution \$72 would be saved for the purchase of books. This was signed by five members.

A minority report signed by three members differed, objecting to removal. For a series of years the library had been accessible only two days a week. It was then determined to place it in a public room and under a qualified librarian with a

JOHN ARCHER

1741-1810.

MEDICAL AND CHIRURGICAL FACULTY

salary of \$100. It was supposed that the annual contribution of \$1 would liquidate this claim, but only \$28 had been received in the whole year. The minority therefore recommend to have the library where it is and to "recommend" two dollars per annum subscription from each member for its increase and safe keeping. 1843

On September 4, 1843, \$100 were paid Murphy, printer of the *Journal*, in full for all claims on his part. At the annual meeting a committee, consisting of the President, Treasurer and Dr Geo. S. Gibson, had been appointed to sell some of the Faculty's stock to meet its standing obligations. This committee disposed of three shares of Union Bank stock and some City six per cents, realizing \$542.62, a sum sufficient to settle this account and also to liquidate the note of \$450 contracted in 1840, in connection with the *Journal*.

July 10, 1844, Dr. Wm. A. Clendinen writes to Judges Archer, Buchanan, Brice, Dorsey, Chambers, Key, and Spence, calling attention to the "Supplementary Act" of 1822, February 19, third section, requiring the judges of the county courts and of Baltimore City Court to give the Act of Incorporation and Supplementary Acts in charge to the Grand Juries. Also calling attention to indecent medical advertisements and asking them to make those concerned the individual objects of their regard. There are some answers from the judges in the archives of the Faculty. 1844

1845. The annual meeting was held in "a hall over Mrs. Scotti's, South Street, a few doors below Baltimore," at 10 a. m., June 2. In his report, Dr. G. C. M. Roberts, chairman of the Executive Committee, apologizes for the few meetings held by the committee and neglect of the important matters 1845

MEDICAL AND CHIRURGICAL FACULTY

1845 brought up at the previous annual session, pleading his impaired health in excuse. He also presented a brief report on Obstetrics. There was a cash balance in the treasury of \$114.30.

The report of the Library Directors was made by Dr. Fonerden, chairman. During the year but \$50 had been received from the Treasurer. Of this, \$10 had been expended in books and \$14.38 in binding. Several valuable volumes could not be accounted for and appeared to be lost. The library, which consisted of about 600 volumes, was now without a librarian, Mr. Tilyard having withdrawn from the place where it was kept. It was necessary, therefore, to make a new arrangement.

The continued interest in the library is evinced by bills in the archives of January 31, 1845, "for binding thirty-two volumes;" of June 9, 1845, "for binding 3 volumes of Guy's Hospital Reports and two folio volumes;" of July 19, 1845, "for binding twenty-seven volumes of monographs;" of October 3, 1845, "for binding twelve books;" of November 25, 1845, "for binding nine books." There is record also of the purchase of one book March 10, 1845, and of two journals June, 1845. Binding was also done in April and May, 1846.

A note was addressed to the various libraries in the city to ascertain what arrangement could be made about room and librarian, the latter being expected to notify delinquents every three months and to take stock once a year. The replies to this note are preserved in the archives. But it was finally determined to erect shelves in Dr. Fonerden's office, he having agreed to give his services and office free and to act as Chief Librarian. Dr. Wm. H. Davis was appointed Adjunct Librarian at a salary of \$50 per annum. The books were moved on August 26, and after everything was put in order, the collection was opened

MEDICAL AND CHIRURGICAL FACULTY

to members on September 8. From this time to the next annual meeting the room was open 113 days, viz: on Monday, Wednesday and Friday afternoons. On twenty-nine of these there were no calls, on eighty-four there were 149 calls, all by twenty-four members.

1846. The annual convention began on June 1, in Franklin Saloon, corner Baltimore and North Streets. Dr. Joel Hopkins, President, presided, and there was an average attendance of twenty members. Dr. Roberts presented the report on Obstetrics. The Treasurer, Dr. Cohen, reported the receipts for the year as \$354.94½; expenses \$218.16¼, leaving a balance in hand of \$136.78. The sum of \$100 was appropriated to the enlargement and improvement of the library and \$50 to the librarian. The Library Committee was instructed on the publication of the catalogue of the library to send a copy to each member. An evening session was held at Dr. Dunbar's lecture room.

1846

The Executive Committee was directed to report some beneficial scheme for the Society with a view to creating additional interest and union. The committee accordingly reported the basis of a plan for a "beneficial department," by which on certain conditions impoverished members, their orphans and widows should receive pecuniary aid. Dr. Roberts was appointed a delegate "to any convention in Europe," which he was about to visit.

Dr. N. R. Smith delivered the annual oration on the evening of June 9 in the church at the corner of Charles and Fayette Streets, the citizens generally being invited to attend. His subject was "Lacerated Arteries."

Dr. John H. Briscoe was "chairman" of the meeting of 1847, which was held at the University Building, corner of

1847

MEDICAL AND CHIRURGICAL FACULTY

1847

North and Fayette Streets and was largely attended by delegates from cities and several counties, forty-six being present at the opening. Dr. Roberts of the Executive Committee reported that but one conversational meeting had been held during the year owing to want of public announcement, but that one had been large. The committee had made numerous attempts to secure an orator for the annual meeting but with invariable failure. The membership of the Faculty was reported to number 465 country and 135 city members. The Treasurer announced the receipts for the year as \$471.95 and the balance as \$235.63½. An item in the Treasurer's report is a fee of \$25 paid John Nelson, Esq., for an opinion respecting the constitutionality of the Act of 1838. Mr. Nelson was a prominent attorney, having his office at 35 St. Paul Street, Baltimore. The opinion is dated October 30, 1847, and is to be found in a large envelope in the archives marked "Legal Opinions on the Law and Charter—J. R. Q." He says he thinks the Legislature had the right to pass the law regarding Thomsonians (Act No. 281, passed April 2, 1839), as the exclusive power of licensing conferred on the Medical and Chirurgical Faculty in 1799 was *not* irrevocable and inviolable. He also says there can be no doubt that the Faculty has the power to expel members for improper conduct and practice.

The report of the Library Board was presented by Dr. J. I. Cohen, who had succeeded Dr. Fonerden as chairman. He reports a falling off in the interest of the members and finds reasons therefor (1) in the few additions made of late to the collection; (2) in the small number of young men who had lately joined the Society. He urged a liberal support that it might again become as in former years the rallying point of the profession. Only four works had been added during the year and four journals subscribed for. "We believe," he said,

“that by sustaining this common bond during the present period of what we believe to be unwise legislation on the part of the State in medical matters, the Medical and Chirurgical Faculty may in subsequent years assume the high and active prosperity which it enjoyed in past years. On motion of Dr. Cohen, \$300 were appropriated to the library for the next year, also all funds derived from new members.

Dr. Roberts presented the report on Obstetrics, Dr. D. Stewart that on Chemistry and Pharmacy and Dr. Dunbar that on Surgery. Dr. Baxley was selected as orator for 1848. A registration of births and deaths was proposed.

A report was received from a Committee on the Epidemic Typhus Fever (lately introduced by emigrants into Baltimore), which was later published in the *Baltimore Patriot*, occupying one column of that paper, on June 12. The report was drawn up by Dr. Chew, chairman, and was submitted by order of the convention to the Mayor and City Council.

Arrangements were made for the convention of the National Medical Association, which was to be held in Baltimore in 1848.

On motion of Dr. Dunbar, it was decided to hold a general convention of all the practitioners in the State in the fall, to consult on the general interests of the profession.

The Executive Committee, through Dr. Roberts, proposed a Medical Beneficial Association, and on motion of Dr. Briscoe a committee was appointed to carry out the suggestion and report at the next meeting.

On motion of Dr. Baer it was “resolved that the Executive Committee be requested to take legal advice in relation to the constitutionality of the law passed April, 1839, taking away the chartered rights of this Society, and if advisable to make issue in the case either in a court of law or in the Legislature.”

MEDICAL AND CHIRURGICAL FACULTY

1847 Only actual members were entitled to attend the sessions of the Faculty at this time or to have access to the library. This meeting was held in the saloon of the Newton University, Fayette Street, between Calvert and North Streets.

A special meeting was held a month later (July), at which the plan of "medical reform," as recommended by the American Medical Association, was adopted—at least three years preparatory study and attendance on three courses of lectures. Besides a longer course of study and stricter preliminary requirements, this plan also embraced the founding of preparatory and supplemental schools of instruction. The Maryland Medical Institute, founded by Drs. Frick, Stewart, Theobald and C. Johnston, was one of the fruits of this admirable suggestion. The Baltimore Medical Institute had already been in successful operation under Dr. Dunbar. These excellent schools were well patronized and contributed greatly to advance the teaching of the day, which through the great multiplication of colleges and the short and incomplete courses, had excited great scandal.

1848 1848. The meeting of the American Medical Association, held in Baltimore upon the invitation of the delegates of the Faculty, was the most important medical event of the year. Although preliminary meetings had been held at New York in 1846, and at Philadelphia in 1847, this was the first with complete organization and is recognized in its own Transactions as its *first annual convention*. It will be remembered that the Faculty had appointed delegates to assist in forming a National Society in 1839. Those provisional delegates had been constituted a committee of correspondence to call such a meeting with the concurrence of members of the profession in other States. Dr. Roberts, in his report as chairman of the Execu-

tive Committee, June 1, 1846, confirms this statement and says that his committee had been directed to call a convention of the *Faculty* of the different States in Baltimore for the purpose of devising some plan for the improvement of medical education, but the call had later been made to New York, where it was held in May, 1846. In his report on Surgery, presented to the convention of our Society in 1850 (MS. archives), Dr. Dunbar claims that to the Medical and Chirurgical Faculty of Maryland belongs therefore the credit appropriated by the profession of the State of New York of having proposed and taken the first steps towards this important movement. The Medical and Chirurgical Faculty had been represented in both of the preliminary meetings and was now represented by a large number of delegates. There were also full quotas of representatives from the Medical and Chirurgical Society of Baltimore, the Kent and Frederick County Medical Societies, the two Baltimore Colleges and their alumni associations, and the hospitals. The meeting was held at the Universalist Church, on East Baltimore Street, near Central Avenue (now used as a Polish Roman Catholic Church). The use of anæsthetics was of course the subject of supreme interest, and our Maryland surgeons took an active part in the promotion of this great boon to man. A paper on "Medical Literature," by Oliver Wendell Holmes, deserves mention because of its distinguished author and its own intrinsic interest.

In the annual convention of the Faculty of 1848 we find standing committees on "Conversation Meetings," Memoirs (the first mention of such a committee), New Members, Review of the United States Pharmacopœia and in the various branches of medicine. Dr. Dunbar presented the report as usual on Surgery. Dr. Richard S. Steuart was elected President in succession to Dr. Joel Hopkins, and Dr. Wm. H. Davis was

MEDICAL AND CHIRURGICAL FACULTY

1848 chosen Secretary, vice Dr. Durkee, resigned. On motion of Dr. Cohen a committee was appointed to draw on the retiring Secretary for the amount of his indebtedness to the Society (\$60 for licenses unpaid). The attendance was twenty-six to thirty-seven.

The Treasurer, Dr. Cohen, reports a balance on hand of \$257.72½, although nothing had been received from license fees. He quotes a letter received from Dr. R. A. Durkee, Recording Secretary, in which the latter says that owing to his long illness he had been unable to attend to the business or to hand over the fees received from candidates. Dr. Durkee died before the end of the year, but his estate made good the deficit. An item from the Treasurer's ledger is, "Pd. Second Universalist Society for use of church for national convention held May, 1848, \$50." The chairman of the Executive Committee was directed to have printed the by-laws and charter and a list of members.

The Executive Committee reports that early after the close of the convention of 1847, it had given its attention to a uniform registration law, of marriages, births and deaths in the State, and in obedience to the injunction of the Faculty, had taken the necessary steps to bring the matter before the Legislature. The chairman had corresponded with the chairman of the Registration Committee of the Legislature, and placed the draft of a law in his hands, but the latter had declined any advice on the subject. A report and bill had, however, been framed, the nature of which was unknown. A resolution offered by him appointing a committee to endeavor to secure the passage of the law at the next session of the Legislature was adopted.

The Library Board, through Dr. Cohen, presented its report. Books purchased, twenty-one; donated, seven. Journals received:

British and Foreign Medico-Chirurgical Review, Wood's Quarterly Retrospect of Medicine and Surgery, Ranking's Abstract, American Journal of Medical Sciences. The library by-laws require the presence of the librarian at the library on Mondays, Wednesdays and Fridays, from 5 to 7 p. m. in summer and from 3.30 to 5.30 p. m. in winter. In consequence of Dr. Fonerden having given up his office, an arrangement was in progress to put the collection in the new building, the Athenæum, corner of St. Paul and Saratoga Streets, a location admirably suited to the convenience of the members and where daily access could be had to it.

The thanks of the convention were "tendered to the Committee of Arrangements for the able and handsome manner in which they have discharged their duty in the reception and entertainment of the members of the American Medical Association and also for the measures they adopted to relieve the Society of the expenses attending it." Thanks were also extended to the Dental Faculty for use of room free.

The publication of an annual volume of transactions was "contemplated."

The Board of Examiners of the Western Shore, which "had been constituted a Board of Honor at the last annual meeting," report three members for expulsion, Dr. Augustine Huet, "whose filthy and obscene advertisements constantly fill the columns of our daily journals, an insult to common decency and subversive of good morals," Dr. A. F. Haynel, a homœopathic practitioner, and Dr. George T. Martin. The last named was a son of the great Founder, Ennalls Martin, and became mixed up with "empirical advertisements," in connection with the wholesale drug business, which he carried on in this city for some years. The Board asked that the names of these three and that of Dr. Gideon B. Smith, as meriting expulsion, be

MEDICAL AND CHIRURGICAL FACULTY

1848

omitted in the list of names of members about to be published. It also declared its intention of expelling others guilty of the same offense. The report was signed by Drs. Dulin, chairman, Robinson, Hintze and D. Stewart.

During this meeting occurred the death of Dr. Pierre Chataud, and the Faculty attended his funeral in a body. Resolutions were adopted and it was voted to wear crape for thirty days.

Owing to the prevalence of cholera throughout the country, the Executive Committee deemed it expedient in the fall of this year to call together the Faculty in order "to devise and suggest" sanitary measures for the State in case the disease appeared here. Meetings were held November 3 and 13 at the Maryland Medical Institute on Fayette Street, at which the report of a Committee on Cholera, composed of Drs. Theobald, Baer and Readell, was considered and adopted. The following is an abstract of it: Humidity and impurity of atmosphere are considered powerful predisposing factors. Cleanliness counteracts these agencies and should be insisted on. There should be a fortnightly inspection of premises, etc., and during epidemics additional dispensary physicians should be appointed. The committee recommends the use of chloride of lime freely, warm baths, attention to clothing, avoidance of exposure and especially temperance in eating and drinking. If the bowels are constipated rhubarb should be preferred, if the least lax, lead and opium, or calomel and opium, with rest in bed. It is also recommended that an apothecary be selected in each ward where the poor may procure the above remedies free of cost. The report was ordered to be printed and sent to every town and village in the State.

Honorary membership is first mentioned this year, which concludes the first half century of the Faculty's existence.

1849. A special meeting was held February 13 to appoint delegates to the American Medical Association, and again on the twentieth of the same month, when a motion was adopted that the draft of a law for the registration of births, deaths and marriages "be referred to the Executive Committee, with a request to use all proper diligence to procure the enactment of the same and to solicit the coöperation of the clergy and medical faculty of the State." This motion was proposed by Dr. Owings.

At the annual meeting Dr. Roberts presented a short report on Obstetrics, and also a Medical Directory of the State, containing the names, residences, post offices and times of graduation or licensing of all physicians. Dr. Dunbar made the report as usual on Surgery and Dr. David Stewart offered one on *Materia Medica* and Pharmacy, in which he called attention to cod liver oil, collodion and solution of gutta-percha, newly introduced agents.

A resolution was adopted making members ineligible to the same office two years in succession.

The Executive Committee urges further action for the establishment of conversational meetings or clubs not only in Baltimore, but in every county and town in the State. The good of such meetings was pointed out, not only in the mental improvement of those attending but in the promotion of kindly personal feeling, "the want of which is so much experienced in the medical community of the State and especially in the city."

Dr. Peregrine Wroth was chosen as President for the ensuing year, as I find a communication from Dr. Fonerden, dated June 1849, addressed to him by that title and also a diploma to which his name is affixed as *præses*, dated November 8, 1849.

MEDICAL AND CHIRURGICAL FACULTY

1849 The balance for the year was \$123.41, of which \$50 represented license fees.

The Library Board (Drs. Fonerden and D. Stewart) reports that since June, 1848, it had made an arrangement with the Mercantile Library Association by which a place had been secured for the library in the Athenæum for the next five years, with free access on every day of the week, and the attention of the librarian without further expense than the \$50 annually hitherto paid to the Faculty's librarian. The library had accordingly been placed there. During the year forty-three volumes had been added to it and a number had been presented.

1850 1850. The annual meeting was held in the M. E. Church at Easton on the fifth of June, sixteen members present. Dr. Richard S. Steuart was elected President for the second time. Most of the standing committees made no report, the chairmen being absent. The balance on hand was \$218.63¼. Dr. Dunbar presented the fourteenth annual report on Surgery. He reports a case of malignant disease of the eye of ten years standing, which had been cured by the use of a bread and milk diet. The subject of it was "The Celebrated Dr. Twitchell, the Physick of New England," and the growth had attracted great attention at the annual meeting of the American Medical Association, which Dr. Twitchell had attended, when a great many eminent surgeons examined it. It was then reported by Dr. Bowditch, of Boston. The patient was sixty-eight years old.

Dr. Roberts presented the report on Obstetrics. The Library Board reported the expenditure of \$100 for books, binding, etc. Twelve new books had been purchased and three new journals added to the subscription list. The report is signed by J. Fonerden, chairman.

MEDICAL AND CHIRURGICAL FACULTY

Dr. C. C. Cox offered a resolution, which was adopted, to appoint a committee to report on the propriety of forming a society under the auspices of the Faculty for the relief of the widows and orphans of deceased members.

1850

The committee on registration of births, etc., reported.

A committee, consisting of two from the Western and one from the Eastern Shore, was appointed to consult counsel regarding the charter and law of 1839, and whether diplomas entitle the holders to practice in the State without license.

The annual oration was delivered by Dr. C. C. Cox, of Easton, in the presence of a large audience of members, ladies and gentlemen.

Standing Committees were appointed on Surgery, Chemistry, Obstetrics, Pathology and Practice, Conversational Meetings, New Members, Materia Medica and Pharmacy, the Pharmacopœia and Memoirs.

1851. June 4, Dr. Steuart was succeeded in the presidential office by Dr. Wm. W. Handy. Dr. Samuel B. Martin delivered the annual oration. The balance in the treasury was \$283.89½. Dr. Davis declined a reelection as Secretary, and was succeeded by Dr. Frank Donaldson.

1851

Dr. Dunbar offered a resolution to reconsider the case of Dr. George T. Martin, whose name had been dropped in 1848 for "empirical advertising." It was adopted and referred to the Board of Examiners with directions to reinstate him if judged proper.

Dr. Roberts offered a resolution to the following effect, which was adopted:

Resolved, That the chairman appoint a committee of three, whose duty it shall be to take all necessary means to obtain the passage by the Legislature of the law on

MEDICAL AND CHIRURGICAL FACULTY

1851 registration of marriages, births and deaths as presented to the late Legislature."

This annual meeting was held at Dr. Dunbar's Baltimore Medical Institute, with eighteen members present at the opening.

During the fall some zealous members of the Society instituted weekly conversational meetings. These were continued during the year, being well attended, not only by the physicians of the city but also by those of the adjoining sections and counties. Not infrequently distinguished strangers were present at these meetings, and medical officers of the Army and Navy. These meetings doubtless contributed to revive the "drooping" Society and add to the scanty numbers of its efficient membership. According to a statement of Dr. Hintze, chairman of the Executive Committee, the Faculty was at this time the only Society "of which the State could boast."

1852 1852. A catalogue of the books in the library was published at this time, from which we learn that it contained 1243 volumes.

The Treasurer's report showed receipts amounting to \$552.39½ and a balance on hand of \$177.31½. The Treasurer's book shows that \$360 had been expended on behalf of the library, including shelving, catalogue, insurance; \$157.79 had been expended by the Library Board for books, binding, journals, etc. About \$200 worth of books had been ordered; twenty-eight had been purchased and ten journals subscribed for.

And now the annals tell us of one of those periodical revivals in the career of the Society, which seem to be inseparable from the history of all human organizations, in fact a law of their existence. Each depression gives way in its turn to inevitable

rejuvenation. We cannot always discover a reason for this occurrence, but there must be causes at work somewhere below the surface. The state of medical science in 1852 was undergoing great change. New and more perfect methods of study were being introduced. Chemistry was contributing its aid to investigation, and with improved microscopes, histology and pathology were looming up as recognized branches of medical science, while under the magic of anæsthesia, surgery was taking a new stride. Young men trained abroad were introducing new modes of research and infusing fresh interest into every department of work.

1852

And so in 1853, Dr. Hintze could speak of "the present unparalleled prosperity of the Medical and Chirurgical Faculty." Dr. Hintze had been the chairman of the Executive Committee for the year, the other members being Drs. Yeates and Dunbar; he acknowledges the aid afforded the committee by Dr. M. D. Baer, the President.

1853

In the spring of 1853, the committee issued a circular to the members throughout the State soliciting their attendance at the annual meeting, held June 1 to 3. The result was most gratifying, many applications for membership being received, and a large number availing themselves of the opportunity of participating in an occasion at which an intellectual feast was spread before them such as had not yet been seen at these meetings. Reports were presented on Modern Improvements in Surgery, by Dr. Richard McSherry; on Therapeutics, by Dr. Van Bibber; on the Pharmacopœia, by Dr. David Stewart; on Recent Improvements in Auscultation in Diseases of the Lungs, by Dr. F. Donaldson; on Chemistry, by Dr. Stewart, and on Memoirs, by Dr. Dunbar.

MEDICAL AND CHIRURGICAL FACULTY

1853 An interesting communication was read from Dr. E. G. Edrington, of Pittsburg, formerly of Maryland, giving an account of the ligation of both common carotid arteries in the same subject, in 1823, by Dr. William D. Macgill, of Hagerstown, the first time this had been done. Our interest in this young surgeon, who died in 1833, is heightened by the knowledge that but a few weeks intervened between the reception of his diploma in Baltimore and this great surgical feat. Dr. Edrington speaks of him as "an ambitious aspirant for surgical honors, whose life, though short, was marked by heroic efforts in his favorite branch."

The meeting was rendered memorable by being the last attended by a charter member. On motion of Dr. Geo. C. M. Roberts, June 2, a committee of three was appointed to wait upon Drs. Ashton Alexander and Samuel K. Jennings, and invite them to be present at the next day's session. At the appointed hour the committee, consisting of Drs. Roberts, Dulin and Dunbar, informed the convention that they had performed the duty assigned them, whereupon Dr. Yeates, the President, arose and in suitable terms introduced the distinguished visitors to the assemblage. Both expressed their appreciation of the honor done them. Dr. Alexander said that no event in his whole life had gratified him more than this invitation; that he had always taken a deep interest in the Faculty and had had the honor of being its first Secretary and afterwards one of its Board of Examiners; that he would always feel an abiding interest in its welfare. He was then compelled to leave from exhaustion. As he did so the members by a spontaneous impulse arose and remained standing until he had passed out of the door. A resolution was then adopted, on motion of Dr. Kemp, "that the Faculty felt great gratification in having the presence of Drs. Alexander and Jennings at their session

this morning, and that the Secretary furnish each of these gentlemen with a copy of the above resolution."

The business transactions were of unusual interest. A certificate of the Secretary, Dr. Donaldson, shows that thirty-five new members had been admitted, chiefly in consequence of the action taken at the previous meeting in April allowing candidates to pay their license fee of \$10 in five annual instalments, instead of exacting the whole amount at one payment as had been the rule ever since 1799. The Board of Library Directors reported that during the previous year \$325 had been received from the Treasurer and about \$200 worth of books had been ordered and thirteen journals subscribed for. Forty-four volumes had been added during the year. It was announced that the library would be opened daily from 10 a. m. to 10 p. m. On motion "the usual annual appropriation of \$200 was made out of any funds not otherwise disposed of and fees of admission of new members the ensuing year, as heretofore, were appropriated to the library."

The Treasurer's report shows receipts \$577.93½, expenses \$477.34½; balance on hand \$100.59. He was ordered to fund annually a sum not less than \$50, but subsequently reported his inability to comply with this order.

Many resolutions were offered looking to stronger professional organization in the State and the recovery of lost rights, but as they accomplished nothing it were a waste of time to enumerate them. Dr. Roberts proposed "that a subscription should be taken by the Executive Committee to test in the courts of the State the value of the law and supplements incorporating the Faculty, and also the validity of the law of 1838, or any other law conflicting with the charter." The sequel of this proposal which was adopted will appear further on.

MEDICAL AND CHIRURGICAL FACULTY

1853 A special meeting was held July 6 and 7 at Rechabite Hall, "on Fayette Street near the bridge," which was secured for the occasion "at \$1.50 per day including ice-water."

Attention was now drawn to the fact that there was no medical society at this time in Baltimore, and the profession throughout the State was urged to form city and county district associations in affiliation with the Faculty, in accordance with Art. XIX of the By-Laws. With this view and as the result of this suggestion, "The Medico-Chirurgical Society," which had "already in former time been in successful operation in Baltimore, and whose meetings were for several years objects of much interest to the profession," was revived (in 1855). The formation of minor and more limited associations for purely scientific purposes was also strongly recommended, particularly in Baltimore. Although not directly connected in any way with this body, mention must be made of the institution of the first *Pathological Society*, which met for organization on the eleventh of June. It embraced in its membership most of the rising talent of the profession, and its proceedings which were published from time to time in the journals of the day by the Secretary, Dr. Van Bibber, showed a higher standard of excellence than had been attained by any previous association in the State. The meetings continued until November, 1858. There were fifty-eight members.

A semi-annual meeting of the Faculty was held at Easton, Talbot County, in November, the object of which seems to have been to consider the condition and prospects of the Society. By meeting in the counties it was hoped to have the attendance of the county members. The success does not seem to have met expectations.

A brief report of the proceedings of the year was published at an expense of \$24 for 700 copies. From the list given we

learn that there were then 436 members, 377 being from the Western Shore and 59 from the Eastern. This shows a considerable falling off from the 600 of 1830. The title of M.D. accompanies the names of 310.

The convention of 1854 met also at Rechabite Hall. The Boards of Examiners *failed* to report. The Treasurer reported receipts \$442.84, expenditures \$401.74½, leaving balance on hand \$41.09½. The committee appointed the previous year to collect money to test the validity of the laws conflicting with the charter, reported that they had collected *one dollar*.

1854

The chairman (First Vice-President George C. M. Roberts) called attention to the fact that there were certain rights, franchises, etc., belonging to the Faculty which ought to be investigated. Drs. Roberts, Cohen and Yeates were appointed a committee to investigate and report on the same.

All applicants for membership at this time were required to answer the following questions: 1. Have you given any certificate to the efficacy of any medicine which is used or dispensed as a secret remedy? 2. Do you compound or have you originated any secret preparation with a view to its being sold in like manner as a secret remedy is sold? 3. Do you receive a percentage or any other remuneration from any druggist or druggists on prescriptions? It would appear from the frequent allusions to ethical subjects that there must have been some irregular practices such as those mentioned among members of the profession, and that an endeavor was made to exclude those guilty of them, or even if possible to pursue them beyond the pale of the Society.

The library received as usual a large share of attention. During the year nineteen books had been added and sixteen journals subscribed for. It was now kept in a room at the

MEDICAL AND CHIRURGICAL FACULTY

1854 Mercantile Library's quarters, corner of St. Paul and Saratoga Streets. An unsuccessful effort was made to secure a reduction in the cost of this room, with a view to adding the amount saved to the salary of Mr. Green, the librarian, and thus securing his supervision of the Society's collection. The Library Directors were directed to make the best arrangement possible for the preservation and safekeeping of the library, and the same appropriation was voted as in the previous year. The proceedings of the next year will show, however, that they received only a small part of this sum.

The Committees on Obstetrics, Practice, Therapeutics and Memoirs did not respond when called on, but valuable reports were made on Surgery by Dr. Christopher Johnston, and on Chemistry by Dr. Charles Frick. Dr. Frick's work on the blood and urine was at this time attracting much attention, not only at home, but abroad. His contribution to this meeting was an endeavor to show by experiments the influence of different remedies upon the urine. He contented himself with a report of the facts, leaving his audience to draw their own conclusions.

A special meeting was held June 15, to hear the report of the Roberts Committee on the charter rights of the Faculty. After reviewing the Acts of Assembly of 1807 and 1812, and the opinion of the Court of Appeals of 1838 (all relating to the medical college and university) the report concludes: "That the law passed by the Legislature at its session of 1838, chap. 781 [relative to Thomsonians], is unconstitutional and therefore void. This act deprives this Faculty of such of its franchises as are essential to its vitality and therefore is in opposition to the constitution of the State, and also of the United States. The case of the Regents of the University of Maryland versus the Trustees, as decided by the Court of Appeals,

MEDICAL AND CHIRURGICAL FACULTY

render this conclusion of your committee the more certain because the charter giving life to the *University* is a PART AND PARCEL of that which originated the *College of Medicine*, WHICH COLLEGE OF MEDICINE was legally connected with and is a part of this Faculty. 2. That the act originating the *College of Medicine* is still in legal existence and may be used by this Faculty. 3. That it is to the interest of this Faculty to institute such an examination into this whole subject as may fully declare and establish its rights and privileges." This report was signed by Drs. Roberts and Cohen, Dr. Yeates declining to sign, on the ground that "no practical good could result from any investigation." The committee made no suggestion as to the course to be pursued. The report of the majority was adopted by the convention and the investigation ordered. The committee was authorized to employ counsel if deemed advisable and was directed to report what further action was necessary or advisable.

1854

1855. The proceedings show that the expenses for the year had been \$514.02, leaving the Society in debt for a small amount (\$2.42½) to the Treasurer. The permanent funds of the Society were invested as follows:

1855

| | |
|---|--------|
| City of Baltimore 6 per cent stock of 1870..... | \$1000 |
| " " 1890..... | 100 |
| Five shares Farmers Bank of Maryland, \$30 per share... | 150 |
| Twenty-nine shares Union Bank of Md., \$75 per share.. | 2175 |
| | <hr/> |
| | \$3425 |

A vote of thanks was tendered Dr. Cohen, Treasurer, for his "extraordinary services in securing the stocks and other securities entrusted to his care during the past year."

MEDICAL AND CHIRURGICAL FACULTY

1855 Owing to the scarcity of funds, the Committee on Chartered Rights had been unable to secure legal advice.

The Library Committee had received but \$100 and had consequently been compelled to discontinue all journals and cease the purchase of books. The library was reported to have 1250 volumes, but many journals had been taken away in violation of the rules. The Library Committee had been unable to appropriate the \$50 designed to secure the supervision of the librarian of the Mercantile Library. The financial stress was great and the only way it could be met was to withdraw the \$150 voted to the use of the Executive Committee, or so much thereof as should be necessary, and give it to the Library Committee to meet the liabilities that had been incurred by it. *No* appropriation was made to the library for the ensuing year, and the Library Committee was directed to incur no further expense without the special authority of the Faculty. Such were the straits to which our predecessors were reduced in consequence of the unjust and pernicious Act of the Legislature of 1838. Such were the efforts and the sacrifices they made to retain and hand down to their successors the important work they had undertaken "for the promoting and disseminating medical and surgical knowledge throughout the State."

Dr. Jacob S. Baer, of Frederick (on whose motion the semi-annual meeting at Easton in November, 1853, had been held, in order to rouse the profession of the State to stand up for its rights), again came forward as the champion of justice by moving that the committee be instructed to proceed to institute such proceedings to recover the chartered rights of the Faculty as should be deemed necessary and that an assessment should be made for the necessary expenses. This motion was carried on a division vote, showing that there was strong opposition. The election of Dr. Baer a day or two later, however, indicates

that the part he took in the matter had not estranged from him a majority of the Society.

The Committee on Chartered Rights next day made its report. Whilst the funds had not justified the consulting of counsel, "the subject being one of vital importance to the stability of this corporation in the opinion of your committee, renders it necessary that such an investigation should be made at the earliest practicable moment; the more so because of the fact that there is to some extent a difference of opinion in reference to the 'PRACTICAL GOOD' to result from such investigation. The sooner the whole subject is examined into and finally settled, the sooner will the members of the convention and the medical profession at large know what is the position they occupy and what value is to be placed upon their charter, a charter accepted and acted upon for so many years with manifest advantage to the profession and the public, and solemnly guaranteed to them in perpetuity—"forever." This was signed by Drs. Roberts and Cohen. It was "accepted" and referred to the Committee on Publication. Later the whole matter was indefinitely postponed, when Dr. Roberts asked to be excused from serving longer on the committee.

Dr. Roberts offered to the Society the free use of his hall on Hanover Street, for the accommodation of the library, provided a librarian should be appointed and "the sum now applied for keeping the library be expended in its enlargement." This offer, though formally accepted, was not actually availed of.

Attention was called to the persistent neglect of the Committee on Memoirs to report for years.

Dr. Donaldson offered the following resolution: "That a committee of five be appointed to memorialize the next Legislature for the enactment of a law for the uniform registration of births, deaths and marriages throughout the State." A

1855

committee was appointed for this purpose and a bill was framed which passed the lower house by a nearly unanimous vote the following winter. But in the press of business at the close of the session it was neglected. The committee was still "confident" the bill would be passed but it never did, although the committee continued its agitation of the subject for some time.

The Committee on Conversational Meetings reported with regard to the Medical and Surgical Society, founded this year as a result of the resolution of 1853, to which allusion was made in the proceedings of that year, that the said Society was in successful operation, meeting monthly with forty active members.*

Few, however, of the *older* physicians had joined it. "The committee still fondly hope that the apathy and indifference to the general standing and welfare of the profession and apparent sole devotion to pecuniarily profitable pursuits is about to yield to the laudable examples of the members of our profession in other large cities."

A resolution to publish volunteer papers, as well as reports of standing committees, was adopted, but no such papers appear to have been offered.

Interesting reports were presented at this meeting by Dr. Steiner on Chemistry, by Dr. Miltenberger on Surgery, by Dr. Van Bibber on Obstetrics and by Dr. David Stewart on the Pharmacopœia.

The basis of Dr. Van Bibber's report was the vast obstetrical experience of his father-in-law, Dr. Pierre Chatard, embracing

*The Book of Proceedings of this Society is preserved at the hall. The first meeting was held at Rechabite Hall, June 11, 1855, Dr. Miltenberger, President. The last meeting was February, 8, 1858. Drs. C. Johnston, John Morris and G. W. Miltenberger delivered annual "orations" before it. The same book contains the proceedings of the Baltimore Medical Association from June 11, 1866, to May 10, 1869.

MEDICAL HALL
(Dr. Archer's Residence).

4309 cases. This paper may be considered a local classic and will doubtless be referred to in all times to come by writers upon this subject in Maryland. Dr. Stewart refers to annual reports of his committee since 1850. He alludes to the "absurd" system of weights and measures in use, and the resulting extreme difficulty of converting one into the other, or finding the relation of the standard measure to the weight. He urges that the Faculty "take the lead" in adopting the decimal system and predicts that before another decade that system "will have excluded all others and be as essential to the integrity and scientific position of our Pharmacopœia as the Latin version was a few years since."

1855

The meeting of 1856 was again held at Rechabite Hall. The financial report for the year showed receipts \$356.26, balance on hand \$72.72. The resignation of the Treasurer, Dr. Cohen, was offered and accepted, and his "punctual and faithful performance of duties for so many years," securing as it had for him "the full confidence of the members," was duly placed on record. At the time of Dr. Cohen's resignation the Faculty possessed the following stock: Union Bank, City 6 per cent, and Farmers Bank of Maryland at Annapolis (see 1855).

1856

But few copies of the Transactions of 1855 had been sold in the city and country members had received it gratis.

The Committee on the Library (Drs. Steiner and Cox) reported that owing to the want of money they had been unable to purchase any books or to rebind those requiring it. They suggested that *the library be disposed of to some society in the city*. On motion a committee of five, two from the city and three from the counties, was appointed, to report on the condition of the library, and \$50 were appropriated for the expenses of the latter.

MEDICAL AND CHIRURGICAL FACULTY

1856 A motion by Dr. Hintze was adopted, "That this Faculty highly approve of the reorganization of the Maryland College of Pharmacy, and bespeak for its judicious code of ethics the cordial support of the legitimate members of the medical profession."

Dr. Cox, chairman of the Board of Examiners, reported that the Board had not been able to secure a quorum and suggested that the members of the Board should in future be selected altogether from the place of meeting.

Reports were presented by Dr. McKew on Chemistry, by Dr. H. P. C. Wilson on the Treatment of Malarious Fevers, and by Dr. Monmonier on Memoirs. Papers on Medical Topography were offered by Dr. S. K. Handy, on Somerset County, by Dr. Peregrine Wroth on Kent County, and by Dr. C. Humphreys, on Wicomico County. Dr. Steiner delivered the oration.

Dr. Crane called attention to the need of a fixed and permanent place of meeting and suitable accommodation of the library whereupon a committee was appointed to consider and report upon the subject, which was further considered, but without immediate results, at a special meeting held November 12.

1857 In 1857 the experiment of holding the annual meeting in the counties was tried for the second time. Frederick City was chosen as the place of meeting and the result "approved the deed." In his opening remarks, the President, Dr. Cox, declared that "no more efficient mode of reviving the drooping energies of the Society could be employed than that of migratory meetings." Dr. William Waters, of Frederick, delivered "a very interesting and able oration," and the convention was handsomely entertained by the physicians of Frederick.

MEDICAL AND CHIRURGICAL FACULTY

1857

The report of the new Treasurer, Dr. Hintze, showed receipts for the year, \$370.47; balance on hand, \$62.26. Bills were due for advertising \$24, and for amount due Mercantile Library for use of shelves \$100. He referred to the meagre receipts from fees of new members for the year. The article admitting annual members was repealed.

The Library Committee reported that at the close of the previous annual meeting a careful examination had been made of the collection and that it had been found in such condition that permission had been obtained from the Executive Committee to close it. Many books were missing, those on the shelves were disarranged and everything evinced that the librarian had exercised no care or superintendence over it. It still remained at the Mercantile Library awaiting the purchase of a hall. No additions had been made and the only funds in the hands of the committee were \$23 turned over to it by the previous committee.

Dr. Roberts moved that the Committee on Conversational Meetings be requested to revive, as far as practicable, the old conversation meetings of the Faculty; this was carried and an additional member from each county added to the committee.

Drs. Monmonier and Roberts remonstrated against the long neglect of the Committee on Memoirs.

A report of a special committee, of which Dr. Miltenberger was chairman, throws some light upon the working of the Faculty at this time. "A single member of either of the Examining Boards may grant a license to an applicant, which, however, is but temporary and operative only until a meeting of the Board can be convened (Art. V of Constitution). To constitute full membership and entitle permanently to the full privileges of the Faculty, the Constitution positively requires the signa-

MEDICAL AND CHIRURGICAL FACULTY

1857

tures of five members of the Examining Board for the Western Shore, or three of the Board for the Eastern Shore, it being further requisite that such certificate shall be countersigned by the President of the Faculty and have the seal of the Faculty affixed thereto by the Secretary. Your committee finds nothing either in the Constitution or By-Laws conferring any—even the slightest—privileges on the graduates of any school or university.”

Dr. Steiner presented a report on Medical Chemistry and Dr. Donaldson one on “The Present State of the Science of Auscultation as Applicable to the Diagnosis of Phthisis Pulmonalis.”

But the question of a “hall” overshadowed all others at this meeting. In consequence of an advertisement in the daily papers a building had been offered at No. 47 North Calvert Street, owned by a Mr. C. Kidder, “which could be had by transfer to the owner of the stocks in full payment,” the value of the property being \$3425. The property embraced a lot twenty-five feet front with depth of one hundred feet to a street (Davis). The building covered the entire front and was two stories and attic in height with a corresponding back building, having in all nine rooms and cellars under the whole. There was a ground rent of \$150 per annum redeemable at pleasure. This property and site proving satisfactory to the convention, resolutions were offered and adopted authorizing its purchase and the transfer of the stocks owned by the Society already mentioned. A committee was appointed, called the Committee on Hall, to be elected annually, to have charge of the building, to rent out such portions as were not used by the Faculty, to collect rents, etc.

At the convention of 1858, held June 2, the former faithful Treasurer, now President, Dr. Cohen, "congratulated the members upon their assembling *for the first time since their organization in 1799* in their own hall, and under circumstances so favorable to the future prosperity of the Faculty." He directed particular attention to the report of the Library Committee as truly worthy of their earnest consideration. He trusted that the recommendations of that and the Hall Committee would receive a hearty response from the members. Although withdrawn from the active duties of the profession, as they were aware, he begged to assure the Faculty that he felt the deepest interest in the honor and dignity of the profession with which he had been connected now more than a third of a century, and he promised all the means in his power to further the important schemes now proposed and which he believed if successfully carried out, as he had no doubt could be, would redound to the best advantage of their body and constitute a new era in the profession throughout the State.

The finances of the Faculty claimed the first consideration of the convention, and notwithstanding evidences of liberality they were in such a condition as to create anxiety for the future. The receipts for the year had been *only* \$380, and this included previous balance and \$113 dividends for the past year on the stock transferred in the purchase of the hall, which by agreement with the purchaser had been received; it also embraced \$105 already received for rent of the hall, and \$20 from the estate of Dr. W. R. Handy, a subscription to the "hall fund." The balance on hand was \$121.30.

It will be thus seen how small an amount must have been received from new members. Up to this time the \$10 paid on entrance secured permanent membership and there were

MEDICAL AND CHIRURGICAL FACULTY

1858 *no* annual dues. In consequence of the nearly exhausted condition of the treasury consequent on the purchase of the hall, only a sketch of the proceedings of the Frederick meeting had been published and it had been found necessary to omit the oration of Dr. Waters and the reports of Dr. Donaldson and others. The expense of the publication had been \$30.

The Committee on Hall, under the indefatigable Monmonier, had fully realized the seriousness of the loss of income sustained by the surrender of the stocks and had determined to solicit members for voluntary contributions for necessary alterations and furniture. So successful had they been that they were encouraged to attempt to raise a fund for the purchase of the ground rent. In this they had met with partial success, but felt that they would be completely successful when all the members had been called on, since there had been very few unfavorable responses. So far, collections had been confined to city members only. These had subscribed about \$1200, of which \$295 had been actually collected; \$223 of this amount had already been expended for necessary alterations and furniture. The second story of the back building had been fitted up with cases for the library and the same story of the front building had been arranged for a meeting room. The two rooms on the first floor had been rented to lodges for \$160 per annum. The hall had been rented to the Medical and Surgical Society for its monthly meetings at \$50 and to the Maryland College of Pharmacy for monthly meetings and winter session (commencing the ensuing September) at \$125 per annum. The \$100 hitherto paid the Mercantile Library would now remain in the treasury. About one-half of the \$2500 needed to redeem the ground rent had been collected. A suitable person had been placed in charge of the premises who had agreed to keep the property clean and in good order for the use of some vacant

rooms. The report, which is signed by Drs. Monmonier and Roberts, concludes with the following fine sentiments:

1858

“In engaging in this enterprise, your committee conceive that an important step has now been taken in the right direction towards encouraging friendly intercourse, promoting a spirit of harmony and good will among the members, and elevating and advancing a science which has so many devoted laborers in its various branches. One step further will carry it to a complete success. And there has scarcely been a time when a greater necessity existed for union and harmony in a profession surrounded by so many responsibilities; where so much self-devotion, fidelity and zeal, are required; where so many privations and dangers are constantly encountered to dishearten, whilst there are so few objects offered as incentives to stimulate and encourage to exertion. We should therefore neglect nothing to signalize our benevolent mission. Indeed, we know nothing more worthy of ambition and more ennobling in character than being engaged in efforts to unite and strengthen the bonds of brotherhood in a profession which stands as a monument of the charity and self-denial of so many honored names.”

The Library Committee (through Dr. Miltenberger, chairman,) reported that the books had been removed from the Mercantile Library to the “neat and convenient shelves in the commodious and comfortable room” assigned for their accommodation, where, through the generous assistance of Drs. McKew, Gilman and Morgan, the collection had been opened for the use of members each Wednesday from 4 to 6. Some of the missing volumes had been recovered and some valuable contributions had been received. As no appropriation had been made, the committee had been unable to purchase any new volumes or subscribe for any journals. The committee suggested that “the most feasible plan to draw the profession into

MEDICAL AND CHIRURGICAL FACULTY

1858

the Society appears to be a return to our old faith and habits and a firm resolve to render the library sufficiently valuable to offer attractions to all our brother practitioners. The nucleus we now possess is of exceeding value. We could not desire a better basis of standard and rare works around which to cluster the more modern offsprings of the profession. It would require but a comparatively small stipend, wisely and carefully expended, to render it attractive to all." * * * "In our State," continued the report, "neither diploma, certificate from this or any other society, nor any honorable distinction is required to enable a man to practice medicine." Resolutions to open a subscription list, and to appropriate the membership fees for the ensuing year to the increase of the library were adopted, but, as will appear, the whole amount received in these ways during the next year was but \$20!

On motion of Dr. Monmonier, a committee was appointed to investigate a charge against Dr. E. Landis of having a patient to institute a suit for malpractice against a professional brother.

The Committee on Conversational Meetings reported a few "social reunions" held the previous winter at the houses of members. They expressed their discouragement at the apathy shown in a matter "so highly calculated to improve social feeling and promote the end of the organization of the Faculty," and suggested that twelve monthly meetings be arranged for the next year, "with volunteer meetings in between when anyone is disposed to invite the profession to his house."

Reports from the standing committees were presented by Dr. Edward H. White on Practice, and Dr. J. R. W. Dunbar on Surgery.

A learned and scholarly oration was delivered at the hall on the second evening of the meeting by Prof. Samuel Chew,

which was subsequently published. "This plain and humble hall," he says, "in which we are now gathered together, will probably be the usual, or perhaps the constant, place of all our future meetings. * * * Happy for us if its name be henceforth associated in our minds with recollections of the knowledge, the good sense, the urbanity of deportment, and the friendly and cordial feelings which should subsist among the members of a scientific, liberal and honorable profession." Dr. Chew evidently did not anticipate the collapse that was impending, and of which a forecast was given at the close of this meeting—so auspiciously begun—in the reported failure to secure a quorum. Such was the case at 2 p. m. on Saturday, June 5. An adjournment was then taken to Monday, the 7th at 12 m., and there being again no quorum, the meeting was deferred till evening. And so this annual meeting ended without being able to secure a legal quorum.

1858

On June 1, 1859, *six* members were present at the appointed hour (including President and Secretary) to open the meeting. The number being insufficient, an appointment was made the next day, when the officers (by personal effort) were successful in getting together nineteen. There had not been a single application to either board, and not a single fee consequently received for membership since the last annual meeting. The receipts, therefore, with the exception of a small fund of \$22 subscribed by individuals to the library, had been limited to the rents from the building. Although there was a balance of \$90.11 in the treasury, more than that amount would shortly be due by the Faculty. Under these circumstances the Treasurer, Dr. Hintze, declined a renomination to office.

1859

The Library Board reported that, notwithstanding the library had been kept open regularly one or two evenings each week,

MEDICAL AND CHIRURGICAL FACULTY

1859

and efforts had been made to render it attractive, there had been few visitors. Twenty-two subscribers had been obtained to a special fund, but only one-half the number had paid; with this small amount, several books had been purchased and two journals subscribed for. Dr. Steiner had contributed free a copy of the *American Medical Monthly*, of which he was one of the editors.

The Committee on Hall reported through Dr. Monmonier, that owing to the great revulsion in financial affairs, they had desisted from efforts to raise money until better times. A circular sent to members in the counties had brought but a small amount, whilst very few subscriptions had been added in the city and but little addition made to the former ones. They added that business seemed to be recovering from the depression.

A committee, appointed to examine charges made against Dr. E. Landis, reported that he had been "guilty of a grave offense against medical ethics and one highly derogatory to the honor and dignity of the profession." The offense in this case seems to have been inducing a patient to institute a suit against a professional brother, Dr. H. Inloes, for malpractice. After a full discussion of the report, continued into the next day, and the failure of motions to expel and to postpone indefinitely, the letters of both parties were placed on record, and "that was considered sufficient action for the present."

Dr. Samuel Harper, of Easton, was dropped as censor, on account of alleged union with the homœopaths.

Dr. Roberts offered two motions which were both adopted, (1) to petition the next Legislature to alter the quorum; (2) to appoint a committee to report the causes and manner of expulsion of members.

The following Executive Committee was elected: Drs. Monmonier, C. Johnston, Miltenberger, A. Robinson, and

MEDICAL AND CHIRURGICAL FACULTY

H. P. C. Wilson. These names are given because upon this committee, as will be soon seen, devolved the entire burden of conducting the affairs of the Association for some years. 1859

The *only* report from the sections was one upon Obstetrics by Dr. W. M. Kemp. At Friday's session this report was appointed to be read at 12 m. the following day. At this hour Dr. Kemp began the reading of his paper and as he had not concluded at 3 p. m., further reading was postponed until the following Monday. The entry upon the published minutes is "Monday, June 6, no quorum; Tuesday, June 7, no quorum."

1860-69. Thus it ended. And now when the Society had attained the supreme object of its wishes and aspirations in the possession of a building of its own, and when expectations of activity and usefulness for a long period were most justifiable, it fell into a long sleep. For years, although every effort was made, no meeting was held, and no Transactions published. During this period of hibernation, the Executive Committee assumed its functions, elected officers annually, reelected itself and took care of the property and other interests of the corporation. To it belongs the credit of preserving the Society and making our grand centennial a possibility, for men's minds were soon divided by discord and civil war and there can be little doubt that if it had failed to keep up the organization, no one would have thought it worth while to make the attempt to revive a body shorn as this had been of its chief prerogative and means of income. The following resolution, adopted April 16, 1873, on motion of Dr. John F. Powell, recognizes these services: 1860-69

"*Resolved*, That we are profoundly conscious of our obligations to the older members of the Medical and Chirurgical Faculty of Maryland, who, by their fidelity, zeal and self-sac-

MEDICAL AND CHIRURGICAL FACULTY

1860-69 rifice, maintained the vitality of the Association amid discouragements which would have daunted a less heroic and faithful band."

The following additional particulars regarding this period have been gathered: In 1860 the newspapers contain an advertisement of the annual convention, appointed for June 19, and of adjourned meetings on the twenty-first and twenty-second; also of a special session called for November 22. In lieu of the Faculty, the Executive Committee held an annual meeting June 20, when a balance of \$177.32 was reported, the *only* receipts being from rent of hall, \$350.25. The Frick memorial meeting on March 26 of the same year was also held under the auspices of the Faculty, in whose name the advertisement appears in the papers. The Executive Committee held an annual meeting June 5, 1861, when there was a balance on hand of \$38.17; the only receipts had been from rent of hall, \$102.50. The annual meetings of 1862 and 1863 are advertised in the papers by Dr. Henry M. Wilson, Secretary. In 1863 there is this record: "July 14, 1863, bought for account of Dr. Monmonier, Treasurer, \$400 City Baltimore six per cents of 1890, at 106 $\frac{3}{4}$, \$427," and there is a bill for Resolutions of Medical and Chirurgical Faculty published in the *Sun*, December 31, 1863. The Treasurer, Dr. Gilman, makes an annual report June 20, 1860, in which he says: "By untiring perseverance, the chairman of the Hall Committee has thus far kept the treasury replenished, and with great economy in expenditure has enabled us to close the year with a balance of \$177.32, \$87.31 more than the previous year's balance, and this without having received a dollar during the entire year as fees for membership or from any other source than the rental of the hall." The total receipts were \$430; amount received from hall, \$350.25. Likewise, June 5, 1861, Dr. Gilman makes off

his report for the year from which it appears that the receipts had been \$102.50, all being income from the hall; expenditures (including printing and advertising, \$32.62) \$241.65, leaving a balance on hand of \$38.17. I have it upon the authority of an old member who held office during this period that the following were among those who showed most interest in the welfare of the Faculty at this time: Drs. Roberts, Monmonier, R. S. Steuart, Chew, Kinnemon, Gilman, H. M. Wilson, Donaldson, Van Bibber and Kemp.

From 1859 to 1866, there was no local society in this city. On the twenty-sixth of February, 1866, a number of ex-surgeons and assistant surgeons of United States Volunteers, residing in Baltimore, met at the office of the Commissioner of Health, and formed the Baltimore Medical Association, with the Commissioner, Dr. Gerard E. Morgan, as President. Within two months seventy-four members had been enrolled. This society enjoyed a successful career for many years, when it was merged with the Baltimore Medical and Surgical Society.

It is not surprising, in view of the absence of any authority, to regulate the practice of medicine and the apathy of the Medical and Chirurgical Faculty, that at this time (1867), when everything was undergoing a revival and rejuvenation, as a result of the close of the civil war, the idea of a change should have suggested itself. This actually occurred, and it took the form not of an upbuilding of the old Society, but of founding an entirely new one, upon the same lines as those which had been observed in 1799. A number of physicians took part in this movement and secured from the Legislature an Act founding a society in the State, with full power of control of medical practice. Organization was effected and meetings were held. The manuscript minutes of "The Medical Faculty of the District of Baltimore" are preserved in our library. The first

MEDICAL AND CHIRURGICAL FACULTY

1860-69 meeting of this, which seems to have been a branch of the general or State Society, was held on the seventh of June, 1867. Dr. P. C. Williams, who had been particularly active in securing the passage of the Act, was elected President, and Dr. Judson Gilman, Recording Secretary. There were 217 members. I do not know whether there were other branches or whether there was any actual State organization. When it was discovered that the Act was without an enacting clause and hence invalid, there was an immediate collapse. Thus, by the mere accident of the omission of a few words, our Society was again perhaps saved from destruction.

Another society, founded in 1867, was the *Pathological* (the second of the name), which continued with great success about five years.

About this time the Executive Committee of the Faculty conceived the idea of disposing of the Calvert Street building and moving elsewhere. There were doubtless good reasons for this decision. Owing to the conformation of the ground in that section of the city, Calvert Street had become a great thoroughfare, all the traffic carried on between parts north and south of Saratoga Street, or rather Fayette Street, being done over it. Hence it was impossible to secure there the quiet and composure necessary for reading, and the conducting of medical societies and courses of instruction. And so arose the desire, it may be the necessity, to seek some new and retired site, where the sources of annoyance and distraction would be reduced to a minimum. In theory, this decision was good but in execution dangerous, because the value of property depends so largely upon its accessibility and adaptability to purposes of trade. The creation by the Legislature of a new society in 1867, with powers similar in scope to those granted to the Faculty in 1799, may have stirred the latter at this time to do

MEDICAL AND CHIRURGICAL FACULTY

something, or perhaps the failure of the new movement may have furnished the stimulus.

1860-69

Accordingly the Calvert Street house was disposed of in 1867,* and on the twenty-eighth of September, 1869, a "Purchasing Committee," consisting of Drs. Henry M. Wilson, P. S. Kinnemon, John F. Monmonier and John J. Cockrill, bought with the proceeds of the sale the property No. 60 Courtland Street, 23x63 feet, from Julia Baldwin. The price paid was \$5700, \$2000 of this being cash and the balance mortgage. This mortgage was paid off prior to February 28, 1872, as announced by the chairman of the Executive Committee on that date. There was an annual ground rent on the property of \$138.

The exercises connected with the occupation of the Courtland Street building were held on the twenty-seventh, twenty-eighth and twenty-ninth of October, 1869, the Baltimore Medical Association participating. The action of the Purchasing Committee was reported and ratified.

The Society now quickened into new life, the members began to show renewed interest in its affairs and there were many accessions to the roll. During the ensuing winter special meetings were held twice a month, at which several very instructive and interesting addresses were given. The sections were regarded at this time as the most important feature of the organization. Each section, consisting of five members as a nucleus, was expected to meet once a month to hear papers and discuss the subjects appropriate to its department.

1870. On the twentieth of January Dr. J. R. W. Dunbar became President in succession to Dr. Roberts, deceased, who

1870

*"November 4, 1867. Bill for commission on sale of building, 47 North Calvert Street, Supplee & Co., \$162.50."

MEDICAL AND CHIRURGICAL FACULTY

1870 had held the office since the last formal meeting in 1859. Two meetings of the Faculty were held this year. The annual meeting was convened at the hall on Courtland Street, on the twentieth and twenty-first of April, and Prof. Nathan R. Smith was elected President. The semi-annual meeting was held at Cumberland on the thirteenth and fourteenth of September. The first day was devoted to the discussion of papers, the second to an excursion to the coal mines. A special car was provided and a most delightful morning was spent in viewing the beautiful scenery and the operations of the mines. At Lonaconing a bountiful dinner was provided. The meeting, however, was but meagrely attended and chiefly by Baltimore and Cumberland physicians. Notwithstanding this, the visitors had a charming excursion.

At this time the author of this book was librarian for a year, 1870-71, and made off a manuscript catalogue, according to which there were then 1585 volumes, bound and unbound, in the collection.

Lectures were delivered before the Society at the hall in January, February and March, by Drs. Garretson, P. C. Williams and Latimer, respectively.

1871. The annual meeting was held on the fourth of April. The chairman of the Executive Committee, Dr. Monmonier, referred to the embarrassed state of the treasury. The Treasurer's report was referred to a special committee. The sections were working imperfectly, and a resolution was adopted providing that each chairman should report on the progress in his department at both annual and semi-annual meetings. The Constitution was amended so as to allow Professor Smith to be reelected, which was then done. A supper was given by

the city members in the hall and a very enjoyable evening was spent. The papers read at the meeting were of such interest that they were published in the *Baltimore Medical and Surgical Bulletin*. The annual oration was delivered by Dr. Monmonier. The meeting was not attended, however, so well as had been hoped for. The condition of the treasury gave rise to much embarrassment and anxiety. The committee to examine into the Treasurer's accounts reported, through Dr. Monmonier, that the same were in so confused a condition that it was difficult to report the exact state of the finances. "It appeared, however, that enough funds would be available to meet expenses, if the Faculty would authorize the Executive Committee to sell some city stock in which part of the funds had been temporarily invested." No action was taken upon this report.

1871

A semi-annual meeting was held in the hall of the House of Delegates at Annapolis November 1, 1871.

Dr. J. R. Page was the orator in 1872, delivering an address on "Epidemic Diseases." At the annual meeting, the propriety of establishing a medical journal was discussed and met with great favor; it was referred to the Executive Committee, where it seems to have rested. Suit was brought against the Treasurer, Dr. Kinnemon, for balance due the Society by him, amounting to \$207. It was decided in favor of the Society and the money received after levying upon the Doctor's property. During the ensuing winter bimonthly lectures were instituted and continued for about two seasons. Among those who delivered these lectures were Prof. N. R. Smith, Dr. Joseph Parrish and Dr. O. J. Coskery.

1872

The Society was unable to publish its proceedings this year as was desired, or to add any books to the library owing to deficiency of funds.

MEDICAL AND CHIRURGICAL FACULTY

1873 The meeting of 1873 was held at the hall on April 15. The Treasurer, Dr. Gilman, presented his report, which gave great satisfaction. The receipts for the year had been \$380.26, including rent of Baltimore Medical Association, \$125, do. of Pathological Society, \$100, and dues of members, \$52. The expenses were ground rent, \$138, gas for twelve months \$26.25, and incidentals, \$46.10, leaving a balance in the treasury of \$169.91. *No* new members had been added and there had been *no* additions to the library. The amount in the hands of the Library Board was \$60.21. The convention considered the probable expense of printing 250 copies of the Transactions of the year, and a motion was passed directing the *resumption* of publication and appropriating \$100 for that purpose, "such tax to be levied on the members as should be necessary to make up any deficiency."

Since this resumption the Transactions have been published each year up to the present time, although not of late years with the same fullness as formerly.

The congratulations of the convention were extended to the late President, Prof. N. R. Smith, on his safe return home from Europe and a committee of five was appointed to convey the same to him. Professor Smith's reply was as follows:

"To Drs. Thos. R. Brown, Samuel P. Smith, H. M. Wilson, P. C. Williams, A. Hartman and John Morris.

"GENTLEMEN—It is with the greatest pleasure I accept the congratulations of the distinguished body that you represent, and through none could they come more acceptably than through you. I have had the distinguished honor to preside over your Society, and many of them do me honor as my pupils. If the character and usefulness of the medical profession in Maryland is at all the result of my precepts and example, then

MEDICAL AND CHIRURGICAL FACULTY

is my position in relation to them enviable in the highest degree. Please assure the Society of my profound respect, and of the deep interest which I shall ever feel in their welfare, usefulness and individual prosperity.

Very truly yours,

“N. R. SMITH, M.D.”

1873

Dr. Thomas S. Latimer delivered the annual oration, taking for his subject “Anæsthetics in Midwifery.” The prosperity of the Faculty was now certainly on the increase, yet it began to be apparent that a grievous mistake of judgment had been made in the selection of a location, for on motion of Dr. John Morris, “a committee was appointed to consider the propriety of selling or exchanging the property of the Faculty and procuring other property more centrally located.” The situation on the side of a steep hill near Franklin Street rendered the site inaccessible and during the winter months often dangerous, and the attendance at the library and meetings of the local societies which had joined the Faculty in occupation, began early to fall off. A general financial depression soon lowered the value of real estate, so that it was impossible to sell except at great sacrifice, and a sale was only effected after long delay, at public auction, for the insignificant sum of \$550.

A semi-annual meeting was held on the fifteenth of October, at which a new Constitution was adopted.

The convention of 1874 was the last held in the Courtland Street house. The Treasurer’s report showed receipts amounting to \$936.47 and expenditures \$712.08, leaving a balance on hand of \$224.39. Of the receipts \$260 were from rent of hall to local societies, and \$360.26 balance from the previous year.

1874

MEDICAL AND CHIRURGICAL FACULTY

1874

The Library Committee seems to have been exceedingly derelict in its duties. Although it had a balance in hand of \$60.21, it added no volumes to the library; indeed it held no meetings. This was strange as it had been requested by the Executive Committee to invest these funds in the purchase of suitable works. As soon as its apathy was made known, the Executive Committee directed that it should turn over the funds it held to the treasury, which was done. Nevertheless thirty-six volumes were received by donation for the library.

The Board of Examiners for the Western Shore reported that eighteen members had applied for membership and been admitted during the year, all being from Baltimore.

Dr. L. H. Steiner delivered the annual oration on "The Character of the Model Physician."

The following resolution, offered by Dr. Regester, was adopted:

"Resolved, That this Faculty endorse the ordinance offered by Dr. Chancellor, now before the City Council of Baltimore, for the registration of births and deaths, and request the passage of said ordinance."

Prof. Christopher Johnston exhibited a new splint for fractures of the lower extremity, invented by Dr. T. W. Simmons, of Hagerstown, and called the "suspenso-extensory splint." This apparatus was said to combine the advantages of N. R. Smith's and the Gurdon-Buck system. Professor Miles contributed a paper on the (then) recent investigations upon the functions of the brain, of Jackson, Ferrier, Fritsch and Hitzig and Nothnagle, showing that the convolutions are not for ideas, as had previously been thought, but for movement, and indicating the site of the various centres of motion in the cerebral cortex. Dr. Chancellor read a paper on "Reform in

MEDICAL AND CHIRURGICAL FACULTY

Medical Education," in which he urged that the examination of candidates for graduation in medicine should be taken from the medical teachers and vested in an independent Board of Medical Examiners appointed by the State societies, who should have no connection with the business of teaching. A number of other reports and papers was also read.

1874

A special committee, Dr. Morris, chairman, appointed to consider the feasibility of disposing of the Courtland Street property, and securing a more convenient location, reported in favor of sale or rent and the renting of a suitable hall in a more central position, in which all the medical societies of the city could hold their meetings. Thereupon a motion was adopted instructing the Executive Committee to inquire as to the best terms on which the property could be disposed of, and to report the same at a special meeting.

In accordance with this action, the Executive Committee placed the building in the hands of several real estate brokers, for sale at \$6500, with a ground rent of \$138, or for rent at a minimum of \$400 per annum. Within a week, no offer for sale being made, the building was rented at the latter figure, and a month later a hall on the second floor, West Fayette Street, north side, a few doors west of Park Avenue, was rented at \$130 per annum. Thither the shelving and books were removed, and the semi-annual meeting of the following fall was held there.

At the annual meeting of 1875 the increase of the annual dues and fees of members showed the increase of prosperity over former years. The amount from these sources alone was \$471.60. The total receipts were \$1204.74; expenses \$995.77, leaving a balance in the treasury of \$208.97. There

1875

MEDICAL AND CHIRURGICAL FACULTY

1875 had been added to the membership thirty-seven names, all from the Western Shore, and all except four from Baltimore.

A long report was presented by the Library Board, Dr. Charles H. Jones, chairman. At the semi-annual meeting the Faculty had asked the Board to suggest a plan for the resuscitation of the library, "so that members might have access to new books and recent journals." The committee accordingly suggested that a more suitable room should be secured and properly furnished; that a library fund should be instituted for the voluntary contributions of members; that a monthly medical journal should be established by which medical journals and books could be received free of cost, and that the services of a youth should be secured as librarian. These suggestions were referred to a joint committee, consisting of the Executive Committee and Library Board, whose report will be referred to later. The condition of the library according to this report was very bad indeed. The books were ancient and mostly unsuited for physicians, not a single one of whom had visited the room where the 1400 volumes had lain undisturbed during the year; the room itself was utterly unfit for the purpose, being inconvenient, uncomfortable, inaccessible, small and badly ventilated. In fine, in its present condition the collection was of no practical use or benefit. These expressions seem to have been great exaggerations and the number of volumes must have been underestimated, as, as far back as 1855, there were 1250 and at the very next annual meeting the Treasurer reported "nearly 2000 volumes." The Curator, too, reported the "library well preserved and available."

There was "a Special Committee on Medical Education," whose report was not on hand when called for.

A number of reports and papers was presented, one of the most elaborate being Dr. William T. Howard's on Obstetrics

and Gynæcology. In this, Dr. Howard described a new bivalvular vaginal speculum of his own invention.

1875

In the report on Surgery, Dr. Thomas R. Brown says of Listerism: "The system is still in its infancy in this country and nowhere does it seem to be regarded with favor, and as possessing practical utility."

Dr. Samuel Theobald read a paper on "Tinnitus Aurium," which he maintained to be due to an excitation of the terminal or percipient elements of the auditory nerve.

The oration was pronounced by Dr. Joseph M. Toner, of Washington, D. C., whose subject was, "A Contribution to the Medical History and Physical Geography of Maryland."

In connection with this meeting, the election of Dr. John F. Monmonier, the faithful chairman of the Executive Committee for so many years, to the presidential chair, seems to have been peculiarly appropriate, as a recognition of his invaluable services in the most important position in the Faculty.

1876. The Treasurer's report showed receipts \$1060.87, and disbursements \$981.64. The assets were estimated at \$10,986.73, the Courtland Street house being valued at \$5700, and the library and fixtures at \$5000. These estimates were evidently too liberal. "The library is still stored in a small room and is useless to the Faculty." There had been no donations to it during the year.

1876

Considerable attention was given to the report of the joint committee, to whom had been referred the report made by the Library Board at the previous annual meeting. Quoting the statement of the latter, "the library as it now exists is of no practical utility or benefit and not a single physician has within the past year availed himself of the privilege of membership and the 1400 volumes have been quietly let alone," the joint

1876

committee says: "With equal truth could similar language be used by the same board for this year, and it seems fitting that your committee should first of all discover the cause of this unprofitable condition of affairs. This has been easily done. A moment's examination of the very complete catalogue of our library demonstrates the fact of the unsuitable character of the books, for while to the medical historian and bibliographer a rich field is afforded, the wants of the profession of to-day are most inadequately supplied. Practically, the medical student with his text-books, the physician whose shelves hold a half-dozen volumes of current medical literature, could derive no benefit from the privileges of the library of this Faculty." Nevertheless "the library contains much that is valuable," and an advantageous offer for the purchase of over one hundred of the books had been made by Dr. Billings, on behalf of the Surgeon-General's Department of the United States Army. The joint committee recommends the disposal by sale of the library "as at present constituted," and the formation of a library consisting of medical journals, hospital reports, and society transactions. "The necessity of such a library is self-evident." With regard to a medical journal, the committee "did not approve the plan through which the journal would become the property of the Faculty; for, apart from other considerations, it could hardly be expected that any members would be willing to assume its editorial management subject to the censorship of the Faculty or to the risks of removal at the annual meetings." For the extra expense entailed by this proposal, an increased annual tax upon the members from \$2 (then paid by about 125 members) to \$6, was recommended. It was thought that an increase of membership would follow the adoption of the proposed plan and also that contributions would be made by the more wealthy members.

In accordance with the suggestions of the joint committee the Executive Committee was directed to lease one or more rooms, the same to be under control of the Library Committee; \$450 were appropriated to the Library Board and a special assessment of \$4 was made upon each member of the Faculty. And notice was given by Dr. Williams, of the joint committee, of a proposed amendment to the Constitution, making the dues of city members \$6 and of country members \$3.

At this meeting a new fee table was adopted, and eleven new members were added, all being from Baltimore. Prof. Roberts Bartholow, of the Medical College of Ohio, delivered the annual oration on "The Degree of Certainty in Therapeutics." Professor Bartholow was a profound believer in the efficacy of drugs. With him ignorance was the parent of doubt and the antidote to skepticism was knowledge. With Cabanis he held that "he who despises his art can never become a great artist. Good practitioners are always found to be men entertaining the greatest confidence in the powers of medicines." The remarkable success of great physicians is due chiefly to skill in the application of remedial measures. Nay, more; unbelief he held to be a crime in those who pretend to be physicians. To deal out drugs without confidence in their utility is to practice a fraud on our patients, is an offense against humanity and a continual degradation of our moral sense.

In the report on Surgery by Professor Johnston, a case of transfusion and a transfusion apparatus devised by Dr. Donaldson are noticed; also "the anterior extension splint," a modification of Smith's anterior splint, invented by Dr. G. E. Porter, of Lonaconing, Md. A few pages further on, in the same report, Dr. Coskery's modification of Smith's splint is described and illustrated. In the report on Obstetrics and Gynæcology, Dr. Erich describes his "Figure-of-Eight Pes-

MEDICAL AND CHIRURGICAL FACULTY

1876 sary." Dr. Donaldson contributes a paper on "Thirty-seven Operations of Thoracocentesis by Pneumatic Aspiration."

We learn from the report of the Executive Committee, that owing to the constant and regular sessions of the several city medical societies, it had omitted the usual course of lectures the previous winter.

1877 1877. The Treasurer reported that the property on Courtland Street had been assessed under the new tax law for \$10,854.12 (!), viz: \$8000 on house and \$2854.12 on ground. Considering this amount too high, appeal had been made to the Board of Control Review for relief. Whatever the abatement, the house being very much out of repair would be an expense rather than a source of revenue to the Faculty and he therefore urged that it should be disposed of even though at a sacrifice. It had been rented during the year "for the mere nominal sum of \$25 per month." The receipts had been \$1450.60; the disbursements \$1414.39.

Thanks to the resolutions adopted at the last annual meeting, the library had been formally opened on the evening of the twenty-second of August, 1876, two adjoining rooms in the second story of the building at the northwest corner of Park and Fayette Streets having been rented for its use at an expense of \$30 per month, including light, fuel and attendance. There was a large attendance on the occasion, showing a general interest in the success of the enterprise. To furnish suitable accommodations for the societies which should occupy them, and for those who might visit the library, two dozen armchairs had been purchased at an expense of \$42. "To the very valuable medical literature which has long been in the possession of the Faculty there have been added by the Library Board many foreign and domestic journals, hospital reports and society

transactions." Dr. J. Shelton Hill had been appointed librarian and attended daily from 3 to 6 o'clock, when members had the privilege of removing books. The rooms were open to members from 11 a. m. to 11 p. m. Of the \$450 appropriated to the Library Board, \$326.54 had been expended. There were 1863 bound and 512 unbound volumes on the shelves. "A large number of these books are scarce and valuable, rendered so in part by their antiquity. By far the larger number of these volumes were individual contributions, many of them bearing the autographs of distinguished men in our profession whose memory we should never cease to revere." Thanks, Mr. Chairman, for your returning appreciation of these *treasures!* The collection had been enriched during the year by valuable donations, including 871 volumes added within the previous seven months. Dr. John R. Quinan alone had given one hundred volumes and Dr. Caldwell had presented sixty-two portraits of eminent physicians. Twenty-four journals, foreign and domestic, had been subscribed for, the latter "constituting a new feature of the library." This statement was incorrect as these annals will show. A catalogue was in preparation. The patronage had been moderately good. The sale of books previously suggested had not been effected, nor had the authorities of the Surgeon-General's Library been allowed to help themselves to what they wanted on its shelves. "There is now no practical obstacle," says the Executive Committee, "to the members of the profession of every taste enjoying all the advantages of a suitable library." The two societies (the Baltimore Medical Association and the Clinical Society) had again followed the Faculty, and contributed by their rent to meeting the increased expenses devolving upon the latter by the changes above mentioned.

MEDICAL AND CHIRURGICAL FACULTY

1877 The Board of Examiners reported the names of thirty-three candidates for membership who were duly elected.

The annual oration on "Some Extremes in Therapeutics" was delivered in the Concert Hall of the Academy of Music, which had been engaged for the meeting, by Dr. S. Weir Mitchell, of Philadelphia. After a most able address, Dr. Mitchell congratulated his hearers on the opportunities at their disposal through the noble laboratories provided by the wise generosity of the Johns Hopkins Trustees. He concludes with this fine tribute: "I assure you that as I walked through these laboratories and saw with what splendid hospitality and to what opportunities you invite the young and eager investigator, I had but two regrets—that I am not twenty-one and that I was not born in Baltimore."

The presidential address of Professor Johnston was of more than usual interest and dealt with, *first*, the question of the sacredness of confidential communications before the courts; *second*, the position of the medical expert when subpoenaed to appear in court and testify; *third*, the necessity for a medical register for the city and State; *fourth*, the establishment of a section of medical microscopy. These suggestions were referred to a special committee to report on.

We learn from the report of the Section on Surgery that anti-septic surgery was not yet accepted in Baltimore and that our surgeons were still skeptical of its results, although it had met with "unqualified approval and general acceptance" elsewhere. Professor Tiffany described and gave an illustration of a dilator for rectal stricture invented by him.

Several valuable reports and papers followed, among which may without invidiousness be named one with the title "The Use of Large Probes in the Treatment of Strictures of the Nasal Duct," by Dr. S. Theobald, as particularly striking.

1878. The report of the Treasurer (this may be supposed always to come first in importance) shows how closely to its income the Faculty was living at this time, the receipts for the year being \$1418.39, and expenditures \$1417.48, leaving a balance on hand of but 91 cents. The Courtland Street house was becoming a burden, the ground, taxes and repairs amounting to \$339. All efforts to sell it, even with the help of five property agents, had failed completely, not a bid being made for it. It was represented as being in wretched condition, so that if not soon sold it would require an expenditure of at least \$500 to render it habitable. Something must soon be done.

The landlady had demanded an increased rent for the hall, which now cost \$400 per annum. The Academy of Medicine had become a tenant of the hall the previous year, and the Rush Medical Club had also occupied it during the session of the University. For the first time in many years applications for membership had been received and passed upon by the Eastern Shore Board. Altogether, twenty-four new active members were added at this meeting. Mention of honorary members is made at this time, the honor being conferred upon Dr. Joseph M. Toner, Prof. Roberts Bartholow and Dr. S. Weir Mitchell, recent orators.

The Curator reports that "the preparations left to the Faculty by Dr. Roberts are well cared for and in good condition." The Special Committee on Suggestions made in Dr. Johnston's presidential address the year before, reported that a bill had been prepared forbidding the disclosure of information obtained by physicians from patients during professional intercourse, which bill had passed the Senate, but failed in the House. A Medical Register had been published in accordance with the suggestion as a private enterprise the previous February.

1878

The condition of the library was very encouraging. Forty-one journals were now spread on the tables, "offering a privilege not equaled in the annals of this time-honored Association." The catalogue was completed and in MS. ready for printing when the funds permitted. It was an "author's catalogue" only. One hundred and twenty-three volumes had been donated, making the total number 3010, viz: 2302 bound and 708 unbound. Owing to the want of funds (only about two-thirds of the appropriation having been received from the Treasurer) no new books had been added, except the Transactions of the International Medical Congress. The Transactions of thirty State Medical Associations were now received in exchange. During the year more books and journals had been received than could be shelved, and the room in which meetings were held was so overcrowded that more space was imperatively demanded, and the committee urgently recommended the procuring of larger quarters. On their recommendation, one-half of the membership fees and dues for the coming year were appropriated to the use of the library.

The annual oration was pronounced by Prof. Ira Remsen, of Johns Hopkins University, on "Chemistry in its Relations to Medicine."

Among the reports of sections arresting our attention is one embodying fifty-two successful cases of lithotomy by Dr. Alan P. Smith. Dr. Smith attributed his success to the use of the lithotome of his father, Prof. N. R. Smith; an illustration of this instrument is given in the paper. The most remarkable case of the series occurred in a middle-aged man, who exhibited the strange deformity of two penises and two bladders, the calculus occupying the left. The patient could pass his urine from either bladder at pleasure. A case in every particular similar to this (but not the same) is reported in Van Buren & Keyes'

MEDICAL AND CHIRURGICAL FACULTY

work on the genito-urinary organs. At the same meeting Dr. Erich reported a case of double vagina. Dr. Thos. R. Brown read an interesting paper on "Urethral Stricture," and Dr. Tiffany reported a successful case of "Removal of Naso-Pharyngeal Polypus by Temporary Depression of Both Upper Jaws," which was performed by tracheotomy, to which he attributed his success. (Dr. B. B. Browne characterized this operation as "the most difficult and heroic in the annals of surgery"—Transactions, 1881.) The Transactions of this year contain a handsome heliotype portrait of the late Prof. N. R. Smith.

1878

1879. The Corresponding Secretary reported that two county societies, in Kent and Queen Anne Counties, respectively, had been organized during the year and several others were in contemplation.

1879

The receipts by the Treasurer had been \$1635.91, and disbursements \$1632.49, leaving a balance on hand of \$3.42. So pressing had been the financial stress (the Courtland Street house being vacant for six months) that the Treasurer had had to borrow, in the name of the Faculty, \$200.

The rooms on the corner of Fayette Street and Park Avenue had proven too small "to accommodate the very valuable library, and display periodical literature," and for the meetings of the renting societies, and so on the first of June, 1878, the large, "well-lighted, neatly furnished and easily accessible" hall, at No. 122 West Fayette Street (south side), just opposite, where the annual meetings had been several times held, was leased at \$450, including heat, light, furniture, gas and janitor's services. The three local societies agreed to sub-rent the same at \$100 each per annum. To avoid the necessity of again having to borrow money, an amendment was proposed to the

MEDICAL AND CHIRURGICAL FACULTY

1879

Constitution, requiring each applicant for membership to deposit with his application \$10, which included the admission and membership fee for the first year. This amendment was adopted at the next annual meeting.

A double card catalogue of the library, one of authors and one of subjects, had been made and placed in a suitable cabinet, greatly facilitating reference to the books. It was with some pride that the Library Committee called attention to the fact that ninety-six members had been enrolled since the journal feature had been inaugurated. The number of bound volumes was now 2174. Only two or three new volumes had been added. The library was open daily from 10 to 6. Thirty-nine members had been admitted during the year, including five honorary members, viz: Dr. John S. Billings, U. S. A., Dr. J. J. Woodward, U. S. A.; Dr. J. M. Woodworth, Surgeon-General U. S. Marine Hospital Service; Dr. J. J. Moorman, of Virginia, and Dr. Thomas J. Dunott, of Pennsylvania. To these was added Dr. Stanford E. Chaillé, of New Orleans.

Dr. Samuel P. Smith, the President, was unable to attend the meeting; in consequence, Dr. James Carey Thomas, the First Vice-President, presided at the daily sessions. Owing to the death of Dr. J. M. Woodworth, who had been selected to deliver the annual oration, the latter was delivered by Prof. H. Newell Martin, M.A., D.S., M.B., of the Johns Hopkins University, at Hopkins Hall, his subject being "The Physiology of Secretion." This paper, like all this gifted biologist did during the too few years of work allotted to him here, was a profound disquisition upon this subject, of which he if any one ever was master. This is one of the statements of his memorable paper. Speaking of the fanatical attacks upon biological science, and the legislation to which they had led in Great Britain, he says: These things "must tend to make English-

MEDICAL AND CHIRURGICAL FACULTY

speaking physiology find its future home and centre on this side of the Atlantic." Among other contributions was one on "The Thermantidote, an Instrument for Preventing the Evil Effects, of Heat from Paquelin's Thermo-Cautery when Operating in Deep Cavities," with illustration, by Dr. H. P. C. Wilson, and a series of papers on Psychology, by Drs. J. S. Conrad, I. D. Thomson and Gustave Liebmann.

1879

A special meeting was held October 14, for the consideration of ethical and business matters. At this, seven new members were elected.

1880. There was a balance in the treasury of \$18.37. The Courtland Street house—vacant during the summer—was found to be so dilapidated that, to make it habitable, \$137.87 had had to be expended on it in the fall, after which it was rented for \$20 per month. The total expenses of the property during the year had exceeded the revenue by \$100. A gain had been effected, however, by a decision of the Appeal Tax Court doing away with the taxes. The members of the Faculty, however, became now convinced that they could not longer afford this increasing drain upon their resources, and therefore ordered the Executive Committee to sell the property "on the best terms possible." This was effected in the following July, the net amount received being \$503.50, a loss below actual cost of \$5196.50.

1880

There were 2224 books in the library, and the journals were being regularly bound. No new books have been purchased, but there had been a number of donations.

Five names were added to the membership at this meeting, which was held at the Johns Hopkins University, generously tendered for the occasion. The President, Dr. S. C. Chew, delivered an address, entitled "Medicine in the Past and

MEDICAL AND CHIRURGICAL FACULTY

1880 Future," and the annual oration was delivered by Prof. John W. Mallet, M.D., of the University of Virginia, on "The Claims of Science for its Own Sake upon the Medical Profession." These addresses, by these two distinguished scholars, are eloquent examples of literary effort, and signalize this meeting in an especial manner by their excellence. Among the interesting papers read may be mentioned one on the "Sphygmograph," by Dr. Arnold, and another on "The Use of Caustics in Dermatological Practice," by Dr. I. E. Atkinson. Dr. Coskery exhibited a modification of Croft's splint for fractures of long bones, and Dr. Tiffany commended the advantages of a preliminary tracheotomy with Paquelin's thermo-cautery in excision of the upper jaw. In the report of the Section on Surgery, mention is made of two recent cases of suit for malpractice against Drs. Walls and Reuling, damages of \$10,000 and \$20,000, respectively, being claimed. Both defendants were acquitted of the charge.

Mention may be made of a report by a committee appointed to procure an amendment to the law providing for the registration of statistics in the State. A draught of a bill was framed and duly brought before the House of Delegates, where it was referred to the Committee on Ways and Means. It then disappeared, and was said to have been stolen from the desk of the secretary of the committee. A second bill was procured by telegraph and placed with the committee, who afterwards reported unfavorably upon it. The reason for this was found to be that it contained a clause taking from a public official of the Senate a salary of \$1000, which he had been receiving for *not* doing this very work.

Ethical matters demanded much attention, absorbing considerable time, not only at the annual meeting, but requiring also special meetings for their consideration. Allusion has

already been made to a suit for malpractice brought against a prominent specialist, and which was decided in his favor. This gentleman conceived the idea that a brother practitioner following the same specialty had encouraged the suit against him and had testified in the trial "contrary to all scientific experience and solely for the purpose of prejudicing his case." The Committee on Ethics, after careful consideration, found these charges untrue, the evidence showing, on the contrary, that the physician accused had advised the patients and their counsel not to bring the suit. The first specialist, therefore, tendered his resignation, which was *not* accepted. The bad feeling continued, and in July the second specialist felt constrained to bring charges of unprofessional conduct against the first. After examination by the committee, these came up for consideration before the Faculty at a meeting held on the twenty-fourth of September. Further action in the case was then cut short by the production of an opinion from Col. Charles Marshall, sustaining the validity of the defendant's resignation, which placed him beyond the control of the Faculty. "After prolonged discussion the resignation was taken from the table and accepted." It was realized from this case that there was need for an amendment to the Constitution in reference to the right of members to resign their membership, and Dr. James Carey Thomas gave notice of such an amendment at the next meeting.

Another question which occupied the attention of the Ethical Committee was that of fees for professional services rendered to corporations. This was brought up by Dr. J. Shelton Hill, in connection with the Baltimore and Ohio Relief Association. After full discussion, the following resolution was adopted, which, in view of the sentiment of the Faculty therein expressed, is worthy of repetition:

MEDICAL AND CHIRURGICAL FACULTY

1880 *Resolved*, That the members of the Medical and Chirurgical Faculty of Maryland, without a violation of their obligations to this Faculty, cannot enter into a contract to render professional services to the members of the Relief Association of the B. & O. R. R. upon any terms at variance with the Fee Table of the Medical and Chirurgical Faculty of Maryland."

The one hundred and fiftieth anniversary of the founding of Baltimore was celebrated in October, 1880. The exercises were of the most elaborate character, and lasted several days. A special celebration of the occasion was held by the Medical and Chirurgical Faculty on one of these days, October 13. The President, Dr. H. P. C. Wilson, called the meeting to order at 8.30 p. m., in the hall of the Society, at 122 West Fayette Street. After prayer by Rev. Dr. Leyburn, of the Associate Reformed Church, the President delivered a brief address. This was followed by papers prepared for the evening by Dr. B. Bernard Browne, on the "Surgeons of Baltimore and their Achievements;" by Dr. G. Lane Taneyhill, on the "Medical Societies of Baltimore;" by Dr. Thomas A. Ashby, on the "Medical Journals of Baltimore;" by Dr. Eugene F. Cordell, on the "Medical Schools of Baltimore." Dr. John R. Quinan had been appointed to read a fifth paper, on the "Physicians of Baltimore and What They Have Done," but was not prepared, and asked that further time be granted, which was done. Dr. Quinan continued his researches until 1884, when they had reached such proportions that they were published in a separate volume, "The Medical Annals of Baltimore." Dr. Joseph M. Toner, of Washington, honorary member, read some notes on the "Medical Writings of the Physicians of Baltimore" A vote of thanks was tendered the gentlemen who had read papers, and the same were published in the Transactions of 1881.

MEDICAL AND CHIRURGICAL FACULTY

1881

1881. At the calling of the roll 105 members answered to their names. The Treasurer's report showed receipts of \$1854.84 and expenditures of \$1380.46; balance in hand, \$474.38 (the last representing the receipts from the sale of the house). The estimated value of the library, fixtures and furniture was \$6500, an increase of \$1000 over the previous year. These figures were the official estimate made by the Library Committee and Treasurer by direction of the Faculty, in order that the amount in the Treasurer's report might represent accurately the value of the library. The collection had been insured for \$5000. It now included 2744 volumes, an increase of 520 since the previous report. The number of medical journals had increased from 30 to 100, 80 of these being American and 20 foreign. This great increase in the journal department had been due to the great liberality of Dr. Ashby, who had generously donated 54 of the exchanges of the *Maryland Medical Journal* unmutilated. Fourteen members had subscribed \$10 each, and thirteen \$5 each, towards the expenses of the library, and this amount (\$205) had enabled the committee to carry on their work in the highly satisfactory way in which it had been done. But for this liberal donation and the enthusiastic devotion of the librarian, the committee said their work would have resulted in disastrous failure. Of this progress, the Library Committee in their report say that it was "greater, perhaps, than has occurred during the whole period included within the memory of any of the members of the Faculty."

Twenty-one active and two honorary members had been added, the latter being Professors Mallet and Goodell.

The Curator reported that the Roberts specimens had been deposited at the College of Physicians and Surgeons, and that they were in a bad condition and indistinguishable from the

MEDICAL AND CHIRURGICAL FACULTY

1881 specimens belonging to the College. Later they were removed to the hall.

An interesting event of the year was the presentation to the Society of the academic and medical diplomas of Dr. John Archer, a founder from Harford County, by Dr. George W. Archer, through Dr. Quinan. The first of these was the Princeton A.B., date 1760, and the second the M.B. from the College of Philadelphia, 1768. The latter was the first medical diploma issued in America,* and for that reason especially possesses the very greatest interest. At the same time Dr. Christopher Johnston presented, from Mr. George B. Coale, the diploma of Dr. George Buchanan, another founder, and also a certificate of membership of the same in the American Philosophical Society. Dr. Quinan accompanied the presentation of these interesting medical relics with sketches of the two founders.

Other business transacted was as follows: The appointment of a Reception Committee (motion of Dr. Michael) to receive delegates and members from the counties and provide for their entertainment and comfort; the creation of a Library Building Committee (resolution of Dr. I. E. Atkinson) to consider ways and means of securing a fireproof building and to hold and invest money for the same; a resolution (Dr. Ashby) looking to securing as complete a department at the Peabody Library in medical as in other branches of literature; providing for the reporting of discussions before the Faculty (Dr. Browne); a special assessment of \$3 upon city members for the benefit of the library (Dr. I. E. Atkinson); an amendment to the Constitution providing that "sentence of reprimand,

*An honorary diploma is said to have been conferred upon an English physician by Yale College in 1723.

suspension or expulsion be administered by the President in the presence of the Faculty and published in the Transactions" (Dr. Williams); amending the Constitution so that "no member against whom charges are pending shall have the right to resign without express permission of the Faculty" (Dr. J. C. Thomas); the appointment of a committee to consider the legalizing of anatomical study in Maryland (Dr. Tiffany); the appointment of a committee to consider the advisability of establishing a directory for nurses (Dr. Brune).

In his presidential address, Dr. H. P. C. Wilson particularly urged the construction of a fireproof library building. He preferred the joint stock company plan. He said that he could name several members with valuable libraries who would donate them at death if there were such a building for their preservation.

The annual oration was delivered by Prof. Wm. Goodell, of Philadelphia, who chose for his subject "The Dangers and the Duty of the Hour." The dangers were the decay of home life, the unwillingness of women to become mothers, the increasing resort to divorce, abortion, etc. "To reform these abuses, to make wives not stale-mates, but help-mates, in the true sense of the word; to redeem woman from the bondage of her education and restore her to wifehood and motherhood; to uplift the sexual conscience of the community; to rivet the bonds between husband and wife, and to fill our homes with prattling children—these be the great missions of the physician, missions which he must cheerfully and manfully accept as his Duty of the Hour."

In the reports of sections, Dr. G. G. Rusk has a successful hip joint amputation, and Dr. Coskery a second successful amputation of both legs at one sitting. The last operator also has a successful removal of a fibro-ado-enchondroma of the

1881 neck, weighing 3 pounds 10 ounces. Dr. Howard has three cases of rupture of the uterus during labor; Dr. H. P. C. Wilson, an ovariectomy at the fourth month of pregnancy, without interference with the normal course of labor; the last operator also a case of combined intra- and extra-uterine twin pregnancy, in which one child was removed by laparotomy, the other by a natural labor, both being born alive; Dr. R. Winslow, ten consecutive breech presentations in a woman with deformed pelvis; Dr. Frank West, a case of Battey's operation—the first done in the State. Dr. J. Shelton Hill points out the value of boracic acid in mucous inflammations. (Dr. Theobald was the first to employ and recommend this agent in conjunctivitis. See *N. Y. Med. Rec.*, Feb., 1880.)

There were three papers presented, of such exceptional character and interest that they constituted probably the most striking feature of this remarkable meeting. They were called "invited papers," and their titles were: "A New Method of Studying the Mammalian Heart," by Dr. H. Newell Martin, Professor of Biology, Johns Hopkins University; "A Study of Blood Pressure in the Coronary Arteries of the Mammalian Heart," by Drs. H. Newell Martin and W. T. Sedgwick; "A Fatal Form of Septicæmia in the Rabbit Produced by the Subcutaneous Injection of Human Saliva," by George M. Sternberg, Surgeon U. S. A. In the first, Dr. Martin describes, by means of a plate, the method by which he succeeded in keeping beating, for several hours after death, the heart of a dog which had been completely isolated from the rest of the body except the lungs. By the apparatus which he had devised, Professor Martin had kept a heart beating with beautiful regularity for more than five hours, and had no doubt he could keep it in action considerably longer were that necessary. To prevent clotting, defibrinated blood is used. The maintenance of the coronary

circulation is an essential. A minute description was given of the method, and its successful working was shown upon a dog in the adjoining laboratory. By this plan the study of the physiology of the mammalian heart was possible to an extent never before attainable. One can investigate the direct action of drugs on the heart, can study the effect of varying temperatures and arterial pressures on the pulse-rate, and probably can keep alive for study a kidney, liver, etc., by uniting it with the heart.

1881

The second paper detailed experiments proving that the semi-lunar valves of the aorta do *not* close over the openings of the coronaries during any portion of the cardiac period, a fact which had been hitherto in dispute and unsettled.

Sternberg describes how he inoculated rabbits with his own saliva and isolated a micrococcus. Subsequently Pasteur discovered the same organism in the saliva of a child dead of hydrophobia. There was no suspicion by either of these observers that the organism discovered by them (the coccus of sputum septicæmia) had anything to do with lobar pneumonia. Fraenkel, in 1886, showed first that it was the most frequent organism in acute pneumonia, and present in a very large proportion of all cases of croupous pneumonia. This organism is now known as the micrococcus lanceolatus, the pneumococcus, or the diplococcus pneumoniae.

1882. The annual meeting was held in Hopkins Hall. Although the expenses of the year had considerably exceeded those of previous years, the financial condition was healthy, and the \$500 derived from the sale of the Courtland Street house had been kept intact. The library had been increased by 320 volumes, the books and pictures now being assessed at \$7500. The Library Committee complained that a large por-

1882

1882

tion of its revenue had been diverted by the expense of publishing the unusually large volume of Transactions. The total amount available by the committee had been \$493.80. Of periodicals 118 were regularly received, 64 being from the exchange list of the *Maryland Medical Journal*. The Transactions of 49 societies were regularly received. "Clearly," says the committee, "the library has now become the most important feature of this Faculty, and undoubtedly is the cause of its unprecedented prosperity." Yet the financial resources of the committee were at this time very precarious, and gave rise to constant anxiety. At any moment its support might be withdrawn and a death blow to its prosperity be thus inflicted. The committee, therefore, urged the adoption of an amendment to the Constitution, assessing each city member \$8 and each country member \$3, one-half of the former fee and two-thirds of the latter being appropriated to the Library Committee, and this amendment was adopted and became Art. X of the Constitution.

Seventeen active members and one honorary member (Dr. A. M. Fauntleroy) were elected on recommendation of the Board of Examiners of the Western Shore.

The Curator reported that the Roberts specimens had been removed back to the hall of the Faculty and were in good condition.

There was a report of a Library Building Committee, appointed in 1881. The object of the appointment of this committee was "to consider the best ways and means of securing for the library a fireproof building." The committee had held a number of meetings and fully discussed the subject. They were well satisfied of the advantages of such a building. They recommended the creation of a building fund, to be vested in five trustees, and not to be expended until it had reached

\$15,000, and also a committee of nine to secure contributions to the same, and they suggested that a deed of trust be executed conveying to the Trustees the proceeds arising from the sale of the Courtland Street property, and other securities from time to time. These suggestions were subsequently adopted.

The Committee on Directory for Nurses recommended that such a directory be instituted and that it be modeled after the one founded in Boston in 1879, "which is already a pronounced success." They suggested certain rules for its government, and requested that quarters be furnished for it in the library building and that the services of the librarian, as registrar, be placed at their disposal, at such additional compensation as should be agreed upon. Any receipts above the expenses of maintenance should go to the library. The plan as thus proposed by the committee was adopted at a special meeting, and the committee (Drs. Brune, Johnson and Green) continued with instructions to carry it into effect.

The first colored physician was admitted this year, Whitfield Winsey, M.D., of Baltimore, a graduate of Harvard University, having that honor. Dr. Winsey had been previously rejected by a local society in East Baltimore, where he resided, and he must have felt fully compensated for his previous disappointment in the unanimous recommendation of the Board of Examiners and the unanimous election of the Faculty. Two other physicians of color have since been added to the membership. In a society such as this, representing the entire State and designed for purely scientific and ethical purposes, there should be no requirements other than those of character and attainment.

The committee to secure a law legalizing anatomical study in the State not having been successful, was continued and instructed to resume its efforts.

MEDICAL AND CHIRURGICAL FACULTY

1882 The office of Reporting Secretary was created and the duties of the same defined.

The date of the annual meeting was changed from the second Tuesday in April to the fourth Tuesday.

The following resolutions, adopted at this time, explain themselves :

“WHEREAS, The chairman of the Library Building Committee has informed this Faculty of the very generous offer of Dr. J. M. Toner, of Washington, D. C., who proposes to bestow his library upon the Faculty provided a fireproof building be erected for its reception; and

“WHEREAS, This Faculty is unable at present to comply with the conditions of Dr. Toner’s proposition,

“*Resolved*, That this Faculty appreciates the liberality of the offer of Dr. Toner of his library but in view of the impossibility of complying with the conditions accompanying the gift, feels obliged, though unwillingly, to decline the same.

“*Resolved*, That this action be communicated by the Corresponding Secretary to Dr. Toner.”

A decision of the President at this time made the term “current year,” as used in the Constitution, mean from the beginning of one annual meeting to the next annual meeting.

There were nine sections, viz: 1, Surgery; 2, Practice; 3, Obstetrics and Gynæcology; 4, Materia Medica and Chemistry; 5, Sanitary Science; 6, Physiology and Pathology; 7, Psychology and Medical Jurisprudence; 8, Micro-Chemistry and Spectral Analysis; 9, Ophthalmology, Otology and Laryngology.

From the address of the President, Dr. Donaldson, we learn that “some had suggested the propriety of actually changing the name of the Association to that of the ‘Maryland State Medical Society,’ in order to secure greater interest in the counties; a sad alternative,” he adds, “as there are so many

memories and associations connected with this Faculty in the history of the profession in this State;" but he thought "that we ought to make greater efforts to have this body a representative one of the whole State." Earnest endeavors were being made to make the Faculty the State Society, where yearly valuable reports and original papers full of interest should be presented. In these efforts the members had been encouraged by having at the previous annual meeting a larger attendance from the counties than for many years previously. The President referred to the flattering reception of the Transactions of the previous year, due largely to the papers detailing the original investigations of Drs. Martin and Sedgwick. He referred also to the International Medical Congress, which had met in London in August, 1881, and to the enthusiastic reception given on that occasion to M. Pasteur, "whose renown has spread from his quiet Parisian laboratory over the whole civilized world." Finally he drew up an excellent epitome of the original researches of M. Pasteur and those who have followed him, bearing upon the germ theory. The world had just been stirred to its depths by the claim of Koch, "a very careful and by no means a hasty man, in his conclusions that he had discovered the parasite or bacillus which causes tuberculosis."

The annual address by Dr. A. M. Fauntleroy on the "Reciprocal Action of Morbid Bodily and Mental Influences" followed.

An item in the Treasurer's accounts is "expenses of orator, \$17."

Dr. Tiffany reported a successful amputation at the hip joint for osteosarcoma of the femur.

Dr. Opie reported the proceedings of the Section on Obstetrics and Gynæcology, since its organization, May 27, 1881.

MEDICAL AND CHIRURGICAL FACULTY

1882

Meetings had been held monthly. Dr. Wm. M. Kemp furnished a paper on "What Baltimore Did in a Sanitary Way During the Yellow Fever in Norfolk and Portsmouth in 1855." Dr. Kemp was then City Physician of Baltimore and had been a participator in the events about which he wrote. Briefly, the Board of Health, consisting of Dr. Kemp, City Physician; Dr. Jacob W. Houck, Commissioner of Health, and Dr. Judson Gilman, Assistant Commissioner and Secretary, decided that yellow fever was a disease of local origin and that it was non-contagious. Having therefore improved the condition of all the low grounds near the water front in the whole southern section of the city by draining, grading and filling, and the removal of all accumulated debris, and having thoroughly cleansed every street, lane, alley and court in the city, they opened this port in the freest possible manner to refugees from the stricken cities of Norfolk and Portsmouth. Although thousands availed themselves of this offer and although in a number of these refugees the disease appeared after their coming here, in not a single instance was it contracted by residents of Baltimore. "Baltimore enjoyed a perfect immunity through all her fierce trial, notwithstanding the proximity to and the direct daily communication with the affected cities through her open port. * * * Two facts seemed most apparent, as the outgrowth of observations made during the season. They are the inutility of quarantine as to persons and the importance above all else of a perfect internal sanitary condition."

"Invited papers" of original research carried on in the Johns Hopkins Laboratory were again contributed, their titles being: "The Influence upon the Pulse Rate of Variations of Arterial Pressure, of Venous Pressure and of Temperature," by Professor Martin; "Report of Some Observations upon the Form of the Pulse-Wave and the Mean Arterial Pressure in a Dog

with Patent Ductus Arteriosus," by Wm. H. Howell, A.B., and F. Donaldson, Jr., A.B.; "The Influence of Variation of Venous and of Arterial Pressure upon the Cardio-Inhibitory Action of the Pneumogastric Nerves," by Henry Sewall, Ph.D., and F. Donaldson, Jr., A.B., and "The Influence of Digitaline on the Work Done by the Heart of the 'Slider' Terrapin (*Pseudemys rugosa*—*Shaw*)," by H. H. Donaldson and Mactier Warfield,, A.B.

Professor Martin had improved his method of isolating the mammalian heart (reported the previous year), and as he had been aided so greatly in perfecting apparatus and method by his assistants and pupils, he now called it the "Baltimore Method." "The guiding idea was to prevent all circulation through any part of the body of a warm-blooded animal but the heart and lungs. From want of blood, brain and spinal cord and sympathetic ganglia very soon die, and so the heart is liberated from the control of nerve centres outside of itself. In the second place, the heart, thus isolated, receives only blood of constant composition and known temperature, sent into it under readily controlled conditions." The following conclusions were derived by Professor Martin from his experiments:

1. Variations of arterial pressure have no influence upon the pulse rate.
2. The same is true of variations of venous pressure.
3. The pulse rate and the temperature of the blood flowing through the coronary arteries corresponds, each rising as the other rises and each falling as the other falls.

"By putting the patient in a bath, whose temperature is gradually and carefully lowered, it seems probable that the heart's beat can be slowed as the body is cooled, the extra strain on it diminished and threatened death possibly averted." Professor Martin also ascertained that the dog's heart will still beat regu-

MEDICAL AND CHIRURGICAL FACULTY

1882 larly, though slowly, at 26° C., and regularly, but rapidly and feebly, at 41° C.

Valuable and interesting papers and reports were also presented by Drs. Tiffany (Cancer of Rectum), Van Bibber (Drinking Waters of Maryland), R. Winslow (Osseous and Ligamentous Anomalies), Conrad (Psychology), Chisolm (Ophthalmology), and John N. Mackenzie (Diphtheritic Ulceration of Air Passages).

At special meetings held May 9 and 12 the following additional action was taken:

Resolution of Dr. James Carey Thomas:

“Resolved, That the Medical and Chirurgical Faculty of Maryland, having had its attention called by the address of Dr. Donaldson, the late President, to the code of ethics recently adopted by the State Medical Society of New York, and believing that intelligent consultations are not possible between scientific physicians and homœopaths, Thomsonians, eclectic and other irregulars, hereby reaffirms its adhesion to the code of the American Medical Association.

“Resolved, That the delegates of this Faculty be requested to present these resolutions at the approaching annual meeting of the American Medical Association.”

On motion of Dr. Taneyhill a committee of five was appointed to “lay the claims of the medical profession of the State before the Trustees of the Peabody Institute and request that the library under their charge shall be made as complete in medical as it is in other branches of literature.”

1883. Seventy-two members were present at the opening of the annual meeting, which was held at the Johns Hopkins University, as during the several preceding years. Delegates were present from the Baltimore Medical Association, Acad-

JOHN CRAWFORD

1746-1813.

emy of Medicine and Clinical Society, and from the Cecil County Medical Society. Six new members were elected, all from the Western Shore.

The finances of the Society were reported to be in a healthy condition, the receipts being \$2274.02, the disbursements \$1736. The fees and dues of members and delegates had risen from *nothing* a few years before to \$1184. The value of the library had increased, according to estimate, by \$800 during the year.

The Library Committee reported very gratifying progress in the condition of the library. "It has now assumed such proportions," they say, "and has become possessed of such a varied range of literature, so richly rewarding the labors of the large and increasing numbers of members who consult it, that at last, by the sheer force of its own merits, it has become established as the most valuable and important feature of this Faculty, and has won such golden opinions from all that there no longer remains room for doubt that the future will only increase its usefulness." The number of volumes amounted to 3346, 277 more than at the previous report. Among important additions were Ziemssen's Cyclopædia of Practical Medicine, 17 volumes, and a complete set of the New Sydenham Society's publications to the end of 1881. The *Maryland Medical Journal* was continuing the donation of its exchange list of 81 journals. The total amount of funds available for the committee's use was \$603.10, of which the librarian contributed by "donations, sales and fines," \$63.17. "It is becoming apparent that our present quarters are not capable of meeting our requirements, and that very soon the Faculty will be called upon to provide more suitable halls. Let us hope that these will be in our own building."

The Committee on Publication announced the receipt from Dr. John R. Quinan of his manuscript on the "Physicians of

MEDICAL AND CHIRURGICAL FACULTY

1863

Baltimore," upon which he had been steadily engaged since the Sesqui-Centennial celebration of Baltimore, held in October, 1880. It will be remembered that Dr. Quinan was appointed to read upon that occasion one of the papers, the subject assigned him being, "The Physicians of Baltimore: What Have They Done?" and that, being unprepared to comply, he had requested to be allowed to continue his researches, with a view to future publication, when the work should be complete. The work as now presented completed by him, and which assumed the name of "The Medical Annals of Baltimore," embraced:

"1. A chronology of events connected with the progress of medicine in Baltimore from 1730 to 1880.

"2. A biography of Baltimore physicians, to which is appended a record of their literary contributions.

"3. A subject index to the literature.

"4. A record of public services, military, civil and medical, performed by Baltimore physicians from 1730 to 1880 in the city, State and national governments, with statistics of our charitable and public institutions."

"In recognition of Dr. Quinan's services, your committee recommend that 200 copies be presented to him. This volume, unprecedented and unparalleled in the history of medical literature and societies in the United States, will at once bring its author and this Faculty prominently before a commending public, and go down to posterity as a living monument to the untiring zeal and devotion of one of our honored members." An edition of 1000 copies of the work was printed. It made an octavo of 274 pages, and contained a lithographic portrait of the author.

The Committee on Library Building (Dr. Chisolm, chairman, vice Dr. H. P. C. Wilson, resigned) reported that they

had issued a circular, but had received no *active* response thereto. They believed that the raising of a building fund must be the work of time, and suggested that such amounts as could be spared from the treasury of the Faculty, together with such other subscriptions and donations as might be contributed, should be placed in the hands of the Board of Trustees to constitute the nucleus of such a fund.

The committee to appeal to the Trustees of the Peabody Library to include medical books in their collection, reported that owing to their limited funds the Board was compelled to limit its purchases to books of general utility. "They request from the Faculty the names of such general works on medicine as they would desire to have added to the library." The committee suggested that "the circulating library of Mr. Pratt, having five times as much money to invest annually in books, promises a more successful field for appeal," and recommended that a committee be appointed to appeal directly to Mr. Pratt, "and urge him to consider the medical profession as an important part of the citizens of Baltimore, very sadly in need of medical books to prepare them the better for their daily avocation." The suggestion of the committee was adopted, and the same committee was appointed to discharge the new duty.

The Committee on Directory for Nurses reported that they had successfully initiated the Directory, and that it had been in operation since June 1, 1882, under the efficient management of Dr. William F. Lockwood as Registrar. The Faculty would assume no obligations for it, and it began without funds; nevertheless, "it had neither begged nor borrowed, and had no debts." Twenty-nine nurses had registered, and the receipts had been \$111.41, of which \$9.98 balance had been turned into the treasury of the Faculty for the use of the library.

MEDICAL AND CHIRURGICAL FACULTY

1883 In the following, moved by Dr. William Lee, the Faculty reaffirmed its fealty to the code of ethics (see proceedings of 1882):

Resolved, That the Medical and Chirurgical Faculty of Maryland, in convention assembled, reaffirms its determination to adhere to the time-honored code of ethics of the American Medical Association, which has always been its accepted chart and trusted guide.

Resolved, That this body discountenance any and every attempt on the part of medical organizations to break down this barrier between the regular medical profession and the varied domain of irregular practice, and do earnestly protest against any departures from the true spirit of the supreme law of the organized profession.

Resolved, That a duly attested copy of these resolutions be presented to the American Medical Association in open session at its approaching meeting."

The following resolution, offered by Dr. R. Gundry, was adopted:

Resolved, That a committee of five be appointed by this Faculty to represent to the Legislature of Maryland the urgent need of an institution for the care and education of feeble-minded and imbecile children."

The annual address, by Dr. John S. Billings, was a learned discourse on "Medical Bibliography," a dry subject, which the author made fresh and interesting by his treatment of it. Praise from Dr. Billings is not easily won, and therefore his appreciation of our efforts to secure a valuable collection of books and journals in Baltimore was particularly grateful. "Recently," he says, "by the exertions of a few members, and especially through the energy and zeal of your librarian, * * * the collection has been put in order and made acces-

sible, a certain number of current medical journals are regularly received and other improvements have been effected." He recommends that our library should be made and kept as complete as possible in the local medical history of the city and State, and that perfect security should be secured for our collection, not only for the preservation of the books themselves, but in order that it might be possible for the Washington Library to loan freely to the Baltimore Library. At that time books could only be obtained from the library of the Surgeon-General's office through the libraries of the Peabody Institute and the Johns Hopkins University. With pardonable pride, Dr. Billings compares the resources of his own library with the medical departments of the British Museum and the National Library of France, and he finds that the former not only contains more medical literature than either of the others, but that it covers a wider field, represents better the medical literature of the whole world, and is decidedly a better practical reference and working collection for medical purposes than either. He attributes this result to the fact that the Surgeon-General's is a special library, and not a mere section of a national library, and hence physicians take more interest in it, and give their books and pamphlets liberally to it, which they do not do in the other case. Dr. Billings' modesty forbade his naming a still more important cause of the phenomenal growth of this library, which was his own incessant effort and intelligent interest. Another interesting point in this address was the explanation of the "quaint, old-timey name which the physicians of this State have preserved for their Society"—"the Faculty"—a name by which the medical profession has been known for three hundred years and more. The special use of the term originated in the old University of Paris, where those

1883 who graduated as doctors graduated also as teachers; in other words, the Faculty of Medicine in Paris was composed of all the graduated doctors of medicine of the University, whereas the other Faculties of the University were composed purely and simply of learned men whose sole object and work was to teach. The physicians, therefore, forming both a corps for instruction and a body exercising a liberal profession, of which they had the monopoly, represented the Faculty, whose affairs were of most interest to the world at large, and accordingly became known in the world of Paris and France as *the Faculty* (Raynaud: "Les Médecins au temps de Molière").

The Section on Surgery (Dr. Coskery, chairman,) devoted its attention to the three operations, gastrostomy, splenectomy and nephrectomy. The following conclusions show the sentiment entertained by the committee, which was in accordance with the facts before the profession at that time: The first (opening of the stomach) is justifiable in case of foreign body which cannot pass the pylorus, in progressing malignant contraction of the œsophagus, in stricture of the œsophagus from corrosives not yielding to bougies; splenectomy for conditions unassociated with leucocythæmia is preëminently the most successful operation in abdominal surgery, while in leucocythæmic patients it is probably the most dangerous of operations, and should never be resorted to; nephrectomy is justifiable, 60 of 114 operations having proved successful.

A large number of interesting and highly valuable reports and papers were published in the Transactions for the year, but as a mere enumeration, which is all that I could give to them, would give but little insight into their contents, I would refer the reader to the volume containing them, which is accessible at the library.

1884. The annual meeting was held in Hopkins Hall, Johns Hopkins University, April 22-25, inclusive. Delegates were present from the Clinical Society, Academy of Medicine, Medical Association, and Medical and Surgical Society of Baltimore, from the Allegany and Cecil County Medical Societies, and from the Pennsylvania State Medical Association. The Treasurer reported receipts \$2318.97, and expenditures \$1739.98, leaving a balance of 578.99. The library (including fixtures and furniture) was estimated to be worth \$9000. Dr. W. F. A. Kemp had been appointed Treasurer, to succeed Dr. Judson Gilman, who had died August 1, 1883. The new Treasurer was required by the Executive Committee to execute a bond for \$2000, in accordance with the requirements of the Constitution. An insurance of \$7000 was placed upon the library. Owing to the great growth of the library, the hall had become inadequate for its accommodation, but notwithstanding earnest efforts to secure a more suitable one, none had been found, and therefore the Society had been compelled to remain for the present in the same quarters. Eleven new members were elected.

The Library Committee in their report gave an interesting *résumé* of the previous ten years of its history, which indicated "constant and rapid progress in building up the collection to its present condition of usefulness and great value." They showed that in 1874 the books were boxed, there was no library room, and no journals were subscribed for. It was not until 1877 that the library was revitalized and opened to the members on August 22, there being a large attendance on the occasion. "A large number of the 1863 volumes then in the library were scarce and valuable, rendered so in part by their antiquity. The true value of many of them, however, was not realized until a proposition was received from Surgeon

MEDICAL AND CHIRURGICAL FACULTY

1884 John S. Billings, of the National Medical Library, to purchase a large number of them—books which this experienced and energetic bibliographer was unable to procure at any price, either in this country or in Europe.” In 1877 a carefully prepared list of the best medical journals in different parts of the world, representing all the specialties and branches of medicine and surgery, was subscribed for. “From this date the library, which had previously scarcely had one visitor a week, became more and more popular, until it is at present the daily resort of many of the reading and progressive members of the profession.” The committee called attention to the fact that no committee has yet had control of an adequate appropriation for their work, not even since 1882, when a specific assessment was made upon each member for the support of the library. The total expenditures of the year for the library had been \$504.16. The number of volumes in the library was 4019, of which 277 were duplicates. During the year 673 had been added. The most notable purchases had been the New Sydenham Society’s publications, 74 volumes, and the London Obstetrical Society’s Transactions, 25 volumes. By exchange 185 additions had been made, chiefly from the Surgeon-General’s Library at Washington; 93 had been added by donation, including a set of four elegant new dictionaries by Dr. Morris. The journals received were 119 in number, including 86 American and 33 foreign. Books could now be obtained from the Surgeon-General’s Library by requisition through our own librarian.

The Committee on Nurses’ Directory reported that, owing to the lack of interest and patronage in the directory by members, its affairs had not prospered as had been hoped. The committee was therefore compelled to retain the cash balance for the year, amounting to \$24.08, for its own expenses, instead

of turning it over, as previously, to the library. It also recommended, in view of these circumstances, that an appeal should be made for support to the laity, by advertisement in the public press.

The following resolution was adopted: "That authority be and hereby is granted to Dr. John R. Quinan to amend and revise the 'Medical Annals,' including names of physicians of the State, compiling data up to January 1, 1885, and publish the same at his own expense."

On motion of Prof. C. Johnston, the Faculty approved of the measures at present instituted, to segregate the Surgeon-General's Library and place it in a fire-proof building and under the care of the Surgeon-General."

The standard of papers set in 1881 was not lowered at this meeting. Prof. William Pepper delivered the annual address, on "Dietetics in Disease." The Section of Surgery (Professor Michael) devoted some attention to antiseptic surgery, which had now gained the day, although most of us could recall the time when Lister "was actually laughed at by many of the most prominent surgeons of the time." Even those who opposed Listerism acknowledged its principle by adopting strict "cleanliness in surgery;" it was only a difference in details. The report paid a high but well-deserved tribute to the great surgeon, who had so recently revolutionized surgical practice. Corrosive sublimate was then just coming into favor, displacing to a large degree carbolic acid and iodoform. The advance in abdominal surgery was shown by the following quotation: "A part or the whole of every abdominal organ, except the liver and pancreas, has been removed with success. In short, the surgeon of today hesitates but little more to open an abdomen than to amputate a limb, and some men go so far as to say that if done with proper precautions the pro-

MEDICAL AND CHIRURGICAL FACULTY

1884 cedure is unattended with danger." Dr. Robert W. Johnson had a paper on "Cryptorchidism," with a case and a *résumé* of 89 cases; Dr. John Morris, one on "Vital Statistics of Baltimore in the Past;" Dr. Theobald, one on "Preventable Blindness;" Dr. Chisolm, one on "Removal of a Piece of Iron from the Vitreous Chamber by the Magnetic Needle;" Dr. Mackenzie, one on "Reflex Cough Due to Nasal Polypi," and Dr. Cordell, one on "Congenital Anomaly of the Fœtal Heart, consisting of the Absence of one of the Segments of the Mitral Valve, in which a Systolic Murmur was heard before Birth." This by no means exhausts the list.

1885 1885. A special meeting was held March 31 to hear charges against members of the Society, one member being charged with "conduct unworthy of a member," and four others with "unprofessional conduct." The charges were referred to the Committee on Ethics, whose report was made at a meeting held April 23. The committee found the charges sustained, whereupon the first offending member was suspended for one year. Of the other four members charged with unprofessional conduct, two received a similar sentence and two were sentenced to be reprimanded.

The annual meeting of 1885 was deferred two weeks, in order that members attending the American Medical Association in New Orleans might be present and participate. The Faculty convened, therefore, on the twelfth of May, in the Athenæum Building, northwest corner of St. Paul and Saratoga Streets, the hall on the first floor of which had been rented for the occasion from the Historical Society. Two hundred members attended at the opening. The change from the custom of several years had been necessitated by the increasing demand upon the lecture room at the Johns Hopkins

University, and the inability of the Trustees to place the same at the disposal of the Society. The Treasurer's report revealed the following: The total amount received from the sale of Quinan's Annals (2 years) was \$74.75. The cost of the work was \$417.55. The balance had happily been liquidated by rigid economy in the expenditure of income. The expenses for the year had been \$1682.79, leaving a deficit of \$99.55, which the Treasurer had been obliged to advance.

The Executive Committee reported that it had considered the best disposition to be made of the pathological specimens belonging to the Faculty, and that the Johns Hopkins University had offered to take charge of them and place them in the University Museum, where they would be carefully preserved, promising to return them whenever desired. This offer had been accepted, and they had accordingly been so transferred. Eight new members were added to the Society. The Library Committee still had to complain that it had "been unable to conduct the affairs of the library to its own satisfaction or to the best interests of the Faculty, on account of the insufficient funds placed at its command. Much that was desirable; much, indeed, that seemed essential to a well-ordered library, had to be neglected in consequence." Hence, the committee had been reduced to great straits during the year, having received but \$445.10. The committee complained, therefore, bitterly of the disregard of Art. X of the Constitution, adopted in 1882. They showed by figures that the amount received had fallen short of the actual amount to which they were entitled by some \$200 annually. They protested against any appropriation of funds made at the expense of the library, "the feature of the Faculty to which in the largest measure belongs the credit of its present usefulness, and which is the guarantee of its future prosperity." Notwith-

MEDICAL AND CHIRURGICAL FACULTY

1885

standing the cramped condition of the committee's finances, 151 volumes had been added. Sixty-four journals were now received, 36 American and 28 foreign, 43 of the number being obtained by subscription, 20 in exchange and 1 by donation. The Publication Committee reported amount spent for publishing during the year as \$351.75.

The Committee on Nurses' Directory reported that but little progress had been made, notwithstanding advertisement during the year in the daily press, by postal cards and by circular. Still the institution had been maintained without debt, and a cash balance remained in the treasury of \$33.53. Sixty-one nurses were on the registry, including one wet nurse.

From the report of a committee appointed "to draft a law restricting the sale of patent drugs," of which Dr. G. Halsted Boyland was chairman, it appears that there was at this time "no law existing in the State of Maryland, either requiring apothecaries to keep a record of sales of poisonous drugs, or placing any restriction whatever upon such sales, either by them, or the sale of laudanum by grocers, which we are informed upon good authority is also done."

A very important and enlightened report was presented by a committee, consisting of Drs. Rohé and John Morris, who had been appointed at the 1884 meeting, "to take into consideration and report what, if any, specific action can be taken upon the recommendations made in the President's address [Prof. R. McSherry] bearing upon the relations of the medical profession to certain sanitary needs of the community." The subjects mentioned as requiring attention at the time were a sanitary survey of the State, to be carried out under the direction of the State Board of Health, the pollution of streams, the adulteration of food and medicines, the securing of representative and respectable incumbents of medical

positions in the service of city and State, the appointment of medical inspectors of schools, and the investigation and restriction of the social evil. For the supervision of these and other interests the committee recommended the appointment of "a Special Committee on Public Hygiene which shall be the medium of this Faculty in its intercourse with the public or its legal representatives." The committee further recommended that only the power of preliminary action be granted to the special committee, and that in no case shall it have final power to act until its conclusions have been approved by the Faculty at a special meeting. This recommendation was adopted, and Drs. Rohé, E. G. Waters and J. C. Thomas were appointed.

The following has a mournful interest, as showing the collapse of an effort worthy of a better end. On calling for the report of the Trustees of the Building Fund, "the Trustees were, at the request of the chairman, Dr. H. P. C. Wilson, Jr., discharged."

An amendment to the Constitution was adopted, changing the word "gentleman" to "person."

In conformity with the recommendation of the Library Committee, it was directed that the Treasurer should "deliver to the chairman of the Library Committee, at the end of each quarter, one-half of the dues of members received by him during the quarter."

A communication from the New Jersey State Medical Society, on "Preliminary Education," was laid on the table.

It was resolved "That a committee of five be appointed by the President to memorialize the next Legislature in regard to the passage of a bill to regulate the practice of medicine in the State of Maryland, provided they report to the Faculty before appearing before the Legislature."

1885 Dr. Williams called attention to the desirability of the building in which the convention was being held as a permanent library and general meeting room, and a resolution was adopted that it was expedient to move into the same, provided the expense did not exceed \$600.

The address of the President, Dr. Latimer, was upon "The Origin and Diffusion of Cholera." A committee of three was appointed to consider and report upon that portion of the address relating to hygienic precautions against cholera, with the view of using the influence of the Society for the protection of the community.

The Society was again fortunate in having Prof. H. Newell Martin to deliver the annual address. He chose for his subject this time "The Study of the Physiological Action of Drugs," or Pharmacology. This paper is characterized by force and eloquence, and I cannot but think that our Society was highly favored in having so many contributions from him. Of Pharmacology, that branch of science which is concerned with the action of drugs on the healthy body, he says: "I believe it is destined in the near future to acquire an importance in regard to therapeutics which is not yet properly appreciated. * * * There are at present a small number of laboratories devoted entirely to such work on the continent of Europe; not one, I think, in the United States." He traced in detail the history of amyl nitrite, the use of which in angina pectoris we owe directly to experiments on animals. Then followed an eloquent defense of vivisection.

Among reports and papers, Dr. L. Ernest Neale described and illustrated "a new axis-traction forceps" of his own invention, combining the Simpson and Tarnier forceps in one. Cocaine took up much attention, being discussed in papers by Drs. R. W. Johnson, Morris, Cordell, Donaldson, Sr., and

MEDICAL AND CHIRURGICAL FACULTY

Harlan. The experience of Dr. Chisolm was much quoted in this connection. Sanitary science, which had for some years been receiving an increased share of attention, had three papers devoted to it; Dr. W. Chew Van Bibber wrote on travel as a tonic; Dr. Rohé advocated burial of the dead, which led to a discussion on the merits of cremation and burial, the majority favoring the former; Dr. J. C. Thomas urged the importance of the teaching of sanitary science in the schools. Dr. Conrad sharply arraigned the profession for its ignorance of psychology, and urged that it be made a compulsory branch of medical instruction. Dr. R. Winslow reported six cases of penetrating gunshot wounds of the abdomen; Dr. Platt, a case of amputation of an hypertrophied clitoris, five and three-fourths inches long and eight inches in circumference (exactly the size of one removed ten years earlier by Prof. Wm. T. Howard); Dr. F. Donaldson, Jr., reported a case of hard chancre of the tonsil, and Dr. Mackenzie had a paper on hay asthma.

1885

1886. The Faculty was convened in special session on the first of February to receive the reports of the Committee to Draft a Law to Regulate the Practice of Medicine in Maryland, and the Committee on Public Hygiene. The former committee, consisting of Dr. John Morris, chairman, and Drs. Michael, Rohé, Richard Thomas and R. Winslow, read the draft of a proposed bill to be submitted to the Legislature. After various alterations and amendments, it was adopted *in toto* and the committee was authorized to present it to the Legislature. Dr. Rohé, of the Committee on Public Hygiene, announced that several bills were pending before the Legislature bearing on the subjects considered by the committee, and

1886

MEDICAL AND CHIRURGICAL FACULTY

1886

spoke in an encouraging manner of the consideration shown by the members of the Legislature.

The second section of the Medical Practice Bill, which was published in full in the Transactions of 1886, pp. 13-17, provides for a State Board of Medical Examiners, five of whom should be appointed by the Medical and Chirurgical Faculty and two by the Homœopathic Medical Society of the State. All practitioners were required to go before this Board, those having diplomas for the purpose of having the same verified, whereupon they were to be entitled to a license to practice; those without diplomas to stand an examination before receiving a license. Penalties were pronounced against those violating the law. Practitioners of five years' standing were exempt from its provisions.

The bill was duly placed in the hands of the Senate Committee at Annapolis. Certain amendments were suggested by members of the Senate and one by the Homœopathic Institute of Maryland.

A meeting to reconsider this bill was held on March 5. A long and animated discussion then took place, at the close of which the chairman of the committee moved that the Faculty disapprove of the bill, which was adopted by a vote of 24 to 6 (there being 34 present), whereupon the committee was discharged.

The annual meeting of 1886 was held in the Athenæum Building, the lower floor of which had been rented by the Executive Committee in accordance with the resolution adopted by the Faculty at the last annual meeting. According to the financial report, the expense of removal and furnishing rooms was \$307.60. This had been taken from the building fund of \$500, which had thus been reduced to \$192.40.

The total expenses of the year had been \$1769.79, leaving a deficiency of \$141.50 to be met.

The suite of rooms that had now been secured by the Faculty seemed admirably adapted for its purposes, and was certainly far superior to anything it had hitherto possessed. At last we seemed to have secured a permanent resting place for our wandering feet. The situation was central, and three lines of street cars, at the distance of but one square, communicated with all parts of the city. The locality was as free from noise as any in that section of the city. Being on the level of the street, the rooms were readily accessible without any climbing of stairs. The main room was a large and handsome hall, capable of seating comfortably several hundred persons. It was surrounded on all sides by glass-covered cases, constructed at great expense for the use of the Mercantile Library Association, which had formerly occupied these quarters. A gallery likewise extended around the room, and this contained a second series of similar cases. These cases afforded shelving for from 40,000 to 50,000 volumes. There were two other rooms, the smaller of which served as a storage and committee room; for the larger no other use was found except the annual exhibition of drugs and instruments, which now became a feature of our annual meetings, and at the same time a new source of revenue to the Society. A fourth room was allowed us shortly after our occupation, which was devoted to duplicate books and journals, which were arranged on shelves in alphabetical order.

A double card catalogue was soon completed. The pamphlets were arranged alphabetically, and even the odd and incomplete journals were arranged so as to be readily found if wanted. There were closets for valuables and relics. The current journals were displayed on tables. Thus the entire

1886

collection was available in every part to those wishing to consult it. Our accommodations were far greater than we could use, and would serve us for many years to come. There seemed to be no reasonable desire or want that was not or could not be met there, with one exception, and that exception was a large available fund for the purchase of new books. For this we had to wait until the man appeared who possessed the rare faculty of providing a sufficiency of means from professional and other sources. This much, however, I think, can be said of the library at this time: that there never was a similar collection which was so completely at the service of its owners as this, and what it lacked in completeness and size it made up, as far as was possible, by the utility and accessibility of such resources as it possessed.

The local societies readily joined in the occupation of such an elegant hall. The Medical Association, Academy of Medicine and Clinical Society paid an annual rent of \$350, whilst the Academy of Sciences paid \$100. The annual meetings were attended by crowds of members, the rooms were visited by numerous readers, the proceedings were of the highest interest, and the contributions of great value. Indeed, the Society seemed to its well-wishers to have reached the high-water mark of prosperity.

Arrangements were made for the loan of books from the National Library, the Faculty becoming responsible for their safe return, the only limitation being that they were not to be removed from the room. The expense of expressage to and from Washington was borne by the members ordering them. The good results of the securing of better quarters, and consequent more complete protection and preservation of books and other valuable material, were also seen in the large growth of the library during the first year of its sojourn in its new

home. No less than 830 volumes were added during the year, increasing the total to 5000. Many of the accessions were from the library of the late Dr. John Buckler, which was sold at public auction. The books of this valuable collection went for almost nothing, and the librarian persuaded many of the friends of the library to attend the sale and purchase many of the books, several hundred in number, for our library. Many volumes were also added by exchange. At this time we began to receive, in large number, the theses from foreign universities. Yet, notwithstanding all that was done for the up-building of the library, the committee had received only the insignificant sum of \$547.02, including receipts from sales, fines, etc. This amount was \$100 less than that to which it was entitled by the express appropriation of the Society and the provisions of the Constitution. Is it surprising to learn that it was only by individual effort and enthusiasm that such remarkable results were being accomplished? The following quotations from the Library Committee's report show the embarrassment under which it labored: "The failure to secure its proper revenues has obliged the committee to restrict its expenses to matters of vital importance. * * * It is difficult to see how a library, such as it is the desire of the Faculty to have under its control, can be successfully conducted upon the very small and inadequate amount now appropriated to it."

The Committee on Directory for Nurses made a very discouraging report. The Directory was less flourishing than a few months after it was started, and the committee complained of "the absolute indifference or open hostility of the Faculty and the profession to it." Yet sixty-five nurses were registered, and the institution was without any debts. As the committee seemed to have exhausted its resources and to be desirous of turning over the Directory to other hands, it was

1886 transferred to the Woman's Medical College and placed under the care of a committee of the Faculty of that institution.

On the twenty-eighth of April, 1883, the following resolution, offered by Dr. Gundry, had been unanimously adopted:

Resolved, That a committee of five be appointed by this Faculty to represent to the Legislature of Maryland the urgent need of an institution for the care and education of feeble-minded and imbecile children."

At the end of three years this committee reported its efforts and failure in the following words: " * * * They prepared and caused to be presented to the General Assembly a memorial setting forth the claims of this unfortunate class of human beings upon the care and protection of the State, and a bill to establish such an institution was introduced by Mr. Leo P. Thom, a member of the House of Delegates from Baltimore City, which members of your committee were called before the Committee of Ways and Means to explain and support. The bill passed the House of Delegates without much opposition. It provided for the establishment of an institution for the care and training of idiotic and feeble-minded youth, upon grounds to be selected by the Board of Public Works, and made appropriation for the erection and support of the proposed institution for the ensuing two years. Unfortunately, the bill failed to pass the Senate, and your committee regret, therefore, to say this most unfortunate class of beings remain in Maryland outcasts from public sympathy and the most terrible burthens upon the families to which they belong. Discouraged by repeated failures, your committee report their firm conviction of the efficacy of the methods adopted in institutions established in other States for the training of these sadly neglected beings, and their deep regret that Maryland should still hesitate in doing that justice to these, 'the weakest

of our brethren,' that she so freely accords to the other defective classes within her borders—the insane, the blind and the deaf and dumb."

The most important report of this session was that of a committee (appointed May 9, 1882) to draft a law relating to the supervision of the interests of the insane of Maryland. The labors of this committee had been long and arduous, and, unlike those of that just spoken of, they had been crowned with complete and most gratifying success. Extensive correspondence had been carried on with philanthropists and alienists, and examination into similar legislation in twenty-two other States had been made. A bill had then been drafted and submitted to eminent legal counsel, who had spent two weeks in revising and molding it into proper legal form. As revised, the bill had then been brought before the Faculty (March 5, 1884,) and adopted, and the committee had been requested to lay it before the General Assembly and use all honorable means to secure its passage. Few changes were made during its consideration by the two branches of the Legislature, and it was passed and received the Governor's approval April 7, 1886, being entitled "Chapter 487. An Act to add Additional Sections to Article 58 of the Code of Public General Laws, entitled 'Lunatics and Insane.'" On the completion of their report the committee were thanked in resolutions "for the zeal and fidelity with which they have discharged the important duties assigned them," and congratulated on "the eminently successful termination of their long and arduous labors." The names of the committee deserving this high praise were Drs. John S. Conrad, chairman; Thomas S. Latimer, Richard Gundry, G. Lane Taneyhill, James Carey Thomas and John Morris. The points in the bill to which the committee allude as especially an advance upon the previ-

1886

ous legislation are: Commitment of the insane, privileges of free correspondence, visitation by a competent authority, certificate of insanity, licensing of corporations, almshouses and persons receiving the insane for pay, etc.

The presidential address, by Dr. John R. Quinan, dealt with "The Chartered Right of the Medical and Chirurgical Faculty of Maryland to Exact Licenses to Practice in this State," and has already been referred to in connection with the lost privilege in 1839. Dr. Quinan contended that the rights conferred by the charter in 1799 were inalienable, being solemnly guaranteed by the Legislature forever, unless forfeited by abuse or voluntary abandonment. He pointed out that by the Constitution of the United States and by the Bill of Rights of Maryland, charters are sacred. The only law passed by the Legislature conflicting with the charter was that of 1838, entitled "An Act to Authorize Thomsonians or Botanic Physicians to Charge and Receive Compensation for their Services and Medicine," but which in the body of it does not name this class of practitioners at all, the language being, "It may and shall be lawful for each and every person, being a citizen of this State, to charge and receive compensation for their services and medicine, in the same manner as physicians are now permitted to do." Even if this Act were not otherwise null and void, for the reasons already stated, it can apply only to Thomsonians, since it is well settled by the law of the State that an Act is construed by its title and confers no right except that expressed in the title, or to those mentioned in it, and as far as "Thomsonians or botanic physicians" were concerned, there were none in existence to benefit by it. Dr. Quinan presented with his address the written opinion of two gentlemen of the law, of the highest standing and ability, confirming, "after a full and deliberate examination of all the legislative and judi-

cial decisions bearing on the question," the views he had expressed. He concludes that "the Act of 1798 is to-day the law of the State and can be enforced as such."

One would suppose that such an exhaustive review of this whole subject, backed as it was by legal opinion, would be received with the greatest interest and lead to immediate action to recover the privilege so long supposed to be irretrievably lost. It is true the address was referred to a committee of three (Drs. Quinan, Waters and B. B. Browne) to consider and report on. The final disposition of the matter will appear later on. It may be mentioned here that the *Baltimore Sun*, in an editorial on the address (April 28) does not consider the matter so readily disposed of, but regards the law of 1838 as "a real difficulty in the enforcement of the charter," and concludes: "Most persons will be inclined to regard the address rather as an exceedingly entertaining, though somewhat ghostly, contribution to medical literature than as a thing of fearful substance fortified by law." This opinion, emanating as it probably did from Mr. Thomas W. Hall, the legal editor of the paper and a deeply learned lawyer, no doubt had much to do with the indifference with which Dr. Quinan's views were received.

The minutes show that thirteen names were added to the list of members at this meeting.

The Secretary laid before the Faculty a copy of "An Act to Establish a State Board of Medical Examiners and Licensers," emanating from the American Medical Association, which, on motion of Dr. Gundry, was referred to a committee having charge of legal matters.

An amendment to the Constitution with reference to resignations was passed, viz: "All resignations must be sent to the

1886 Corresponding Secretary, and can be accepted only by the Faculty at any meeting except a memorial meeting."

It was provided that keys of the library room should be furnished by the Library Committee to such members as desired them, in order that easy access might be had to the room at any hour of the day. For this privilege an annual deposit of \$1 was to be made with the librarian.

The meeting closed with a brief address by the President, which concluded with these words: "Brethren, while I am warned by the increasing infirmities of age that I cannot much longer enjoy the privilege of participating in your meetings, I do hope that my span of life may be extended to see this venerable Faculty in the full possession of its ancient vested rights as the legal protector of the sanitary welfare of the people of Maryland, and as the uncompromising foe of charlatanism and quackery." There never breathed a truer or warmer soul than John R. Quinan, or one more entirely devoted to the best interests of this Faculty and the profession.

The annual address was delivered by the distinguished civil engineer, Col. George E. Waring, Jr., of Newport, R. I., who spoke of "The Removal and Destruction of Organic Wastes," upon which he was an expert authority. His address, therefore, is one of the most valuable papers that has been read before the Society, and one reads it now with a mournful interest in view of the recent untimely death of the gifted author.

The usual number of valuable reports and papers upon various subjects was presented. I may be pardoned for singling out among these one on puerperal eclampsia, by Professor Miltenberger, since it embodies the experience of one of the foremost obstetrical teachers and practitioners in America.

A series of special meetings was held during the ensuing summer and fall to consider the legal points growing out of

PHILIP THOMAS

1747-1815.

Dr. Quinan's address on the charter right of license. The committee presented its report on July 20, endorsing the opinion of the President as "correct and unassailable." A case was quoted in which Judge Martin, in the Court of Common Pleas, gave judgment for a Thomsonian practitioner, who was suing for a bill under the law of 1838. At the same time the Judge had stated that all other practitioners in the State were compelled by law to take out licenses. The committee was further of the opinion that if the constitutionality of the law of 1838 had been tested in the courts, that law would have been declared null and void. The committee therefore suggested that judicial proceedings be instituted forthwith against all quacks, and that notices be sent to physicians throughout the State not licensed already, requiring them to procure the same, those holding diplomas by exhibiting these, and those without diplomas by submitting to examination. After prolonged discussion it was resolved to obtain the opinion of the Attorney-General of the State "as to the feasibility of execution of the charter," and the Board of Examiners was requested to discharge this duty. In due time the chairman of the board, Dr. Charles H. Jones, reported that the duty had been performed, and that a reply had been received from the Attorney-General to the effect that it was beyond the scope of his authority to give an official opinion as to the question propounded. There was much difference of opinion as to the proper method of enforcing the charter among those who favored that measure, and as to the failure to secure the opinion of the State law officer, so that the matter dragged very much, and at the meeting at which it was finally disposed of, held January 6, 1887, "much apathy in regard to the favorable consideration of the subject was exhibited by the members, some leaving the hall," so that the final action was a resolution "that

1886

the communication from the Board of Medical Examiners addressed to the Attorney-General of Maryland, referring to the legal rights of this Faculty, together with the reply received from that officer, be placed among the archives of the Faculty and that the matter be now ended." Among those who were in favor of taking action to revive the charter were the committee—Drs. Quinan, Waters and Browne—and Drs. Evans, Williams, Winslow and Ashby; among those who opposed such action, apparently solely on the ground of its inexpediency, were the President, Dr. Miltenberger, and Drs. I. E. Atkinson, Tiffany, J. C. Thomas, Gundry, Latimer, C. Johnston, Brune, Michael, Coskery and Lynch.

1887

1887. The eighty-ninth session was held at the hall, corner of St. Paul and Saratoga Streets, commencing April 26, with 111 members in attendance at the opening. The large attendance at this meeting is noticeable; on the second day, at the delivery of the President's address, there were 312, and on the third day 172. The Treasurer reported total expenses \$2043.53, which was \$276.27 in excess of the receipts. The local societies were paying an annual rental of \$450. A telephone had been placed in the hall. The Library Committee had received, for the first time, the amount by law due it; the total amount received by the committee was \$537.31. There had been an increase in the library of 882 volumes, the total number now being 5882, of which 680 were duplicates. There were 3173 pamphlets. The largest donor of the year had been Dr. F. Donaldson, 138 volumes. By exchange 134 volumes had been added, and only 7 by purchase. Theses had been received in exchange from five German and one Dutch university. The journals numbered 74.

The writer of this volume takes the liberty of making a personal allusion here to himself, for which he hopes he may be

pardoned. At this time he withdrew from the position of librarian, after a service of seven years. His withdrawal was involuntary, and was due to his unwillingness to assume the role of Registrar of the Nurses' Directory, which a member of the Library Committee, now deceased, insisted upon. His reasons for this refusal were: (1) He thought that the new duties would conflict with those of librarian and with the welfare of the library, which demanded all the time at his disposal; (2) he felt it derogatory to his professional position to become a Registrar of a Nurses' Directory. How he had discharged his duties during the seven years, the reports of the Library Committee during that period will show. His whole heart and soul were in the work, to which he gave his time and means during the best years of his life without stint. During that period the number of volumes had increased from 2224 to 5882, and the journals from 28 to 74. Most of the former additions were the result of personal effort. Sets of journals, transactions, reports, etc., had been completed or largely added to. Many pictures, relics, and 3173 pamphlets had been collected. There was a complete double card catalogue, and everything in the library was systematically arranged and readily available. The annual reports will show how inadequate were the resources of the Faculty during these years for the maintenance of its library. Had it not been for the personal efforts and sacrifices of members, the work would soon have come to a standstill.

The miscellaneous business of the meeting embraced the following: A proposition to abolish the sections was lost. A committee of twenty was appointed to solicit subscriptions to assist in defraying the expenses of the Ninth International Congress, which was to be held in Washington in September, 1887. Ten names were added to the membership.

1887 The President closed the meeting with a few remarks, from which I quote the following: "I do not remember a single year during my long connection with this time-honored Faculty in which its meetings have been so enjoyable, so instructive, so well attended. I believe this Faculty is on the road to greater success."

The address of the President, Dr. Miltenberger, was a scholarly and eloquent oration on the contemporary position of medicine and the profession.

The annual address, on "Modes of Infection," was delivered by Prof. William H. Welch. The most important discoveries in recent times, he said, had been made in bacteriology. The germ theory was no longer a theory; no one competent to form an opinion doubted that certain infectious diseases were caused by micro-organisms. The terms "contagious," "miasmatic-contagious" and "miasmatic" were discussed and criticised as no longer adequate. The spread of cholera and typhoid fever was particularly elaborated, and it was claimed that the contagia emitted in these were in just as active a state as those of smallpox and scarlet fever. Every infectious disease may be transmitted artificially from individual to individual. Frequency of communication depends upon the channel of elimination. If, as in malaria, the virus is not discharged from the body, there is no communication. If the virus is discharged only in fæces, as in typhoid fever and cholera, contagion is possible, but not likely. If the virus be eliminated by the skin, and adhere to scales of epidermis floating into the atmosphere, as in smallpox, contagion will be common. It seems improbable that micro-organisms can be conveyed from the body by the breath. The life of organisms outside the body, as spores or in the completely developed state, was considered as fully as the knowledge of the subject permitted. The agency of predisposition, heredity, preëxisting disease, soil,

drinking water, milk, food, actual contact, the breath, excretions, etc., was treated in a masterly manner, and in the full light of the investigations made up to that time. Attention was directed to the agency of flies and other insects in the transmission of disease, a matter that is now attracting so much attention. Dr. Welch concluded with these words: "We are only upon the threshold of a deeper insight into the nature of a class of diseases which have been more devastating to the human race than any upheavals of nature, or any wars. They have left their imprint upon the political, the social and the intellectual history of the world. One need not be of a very sanguine temperament to hope that our steadily increasing knowledge will bear fruit, not only as in the past, in the prevention of these diseases, but also in a rational system of causal therapeutics."

1887

Nine papers and reports follow the addresses in the Transactions.

1888. The ninetieth annual meeting was held at the St. Paul Street hall, commencing April 24, the attendance being large, varying from 176 to 213. The Treasurer reported a deficit of \$243.49, but Dr. Michael, at the request of the Executive Committee, had succeeded, by personal solicitation, in securing \$145 of this amount by private subscription, and Dr. Taneyhill, the Recording Secretary, through a pharmaceutical exhibit, which he had gotten up in the large room adjoining the hall of meeting, had turned into the treasury the net profit of the same, amounting to \$125. These sums were most timely and welcome, and reflected great credit on the zeal and perseverance of those gentlemen. The amount received from societies renting the hall had fallen to \$331.25, a loss of over \$100. This loss was due to the disbandment of the Academy of Medicine and the relinquishment of the rooms by the Academy of

1888

1888

Sciences. Contributions had been made to the expenses of the International Medical Congress of \$175. The Library Committee had received \$558, a larger amount than usual. There had been additions to the library of 196 volumes, making the total 6078. The Nurses' Directory was now located in the hall and under care of the librarian, who reported 64 nurses enrolled, viz: 55 female and 9 male. The number of calls had largely increased, and demands from various portions of Maryland and adjoining States had been received and supplied. There were five massage nurses on the lists. The total income for the year, \$151.82, had been larger than in any previous year, and there was a balance of \$3.57. "The profession and public have begun to recognize the importance of obtaining the services of well-trained nurses in all cases of sickness."

Miscellany: Dr. Gundry reported that the committee, of which he was chairman, appointed to petition the Legislature to pass a law establishing an institution for feeble-minded children in Maryland, had succeeded in its efforts.

On motion of Dr. Ashby, a committee of nine was appointed to endeavor to increase the membership of the Faculty. On motion of Dr. Rohé, two copies of the *Index Medicus* were ordered to be procured for the library.

The additions to the membership amounted to thirteen.

The Presidential address, by Dr. I. E. Atkinson, was devoted to "Medical Charities," and the annual address, by Dr. Richard Gundry, was upon "Some Problems of Mental Action." Dr. Atkinson brought forward statistics which showed that "the aggregate number of free hospital beds in Baltimore [888, including 365 in Bayview Asylum] does not bear such a very small proportion to that of other large cities; but in their equipment, in the facilities afforded for the treatment of disease and injury, their deficiencies become lamentably evident

MEDICAL AND CHIRURGICAL FACULTY

upon comparison." The splendid service of the Johns Hopkins Hospital, with its 120 beds, was then a thing of the near future, to which all were looking forward with hope and confidence. Dr. Gundry's paper is a scholarly and learned one, showing a wide range of reading and observation, and written in the best style and in the best English.

1888

Dr. L. Ernest Neale reported a case of Cæsarean section and Dr. J. H. Branham one of complete excision of the larynx. The number of papers in the volume, including those named, is eighteen.

1889. The annual meeting was convened at the hall, St. Paul and Saratoga Streets, on April 23, 211 members being present. The debt had been reduced to \$94.91. The receipts from societies renting the hall, including the use of telephone, were reduced to \$267.25. The Library Committee had received \$649.64 (\$51.40 being from the Nurses' Directory), which was the largest amount ever received by the committee; 396 volumes had been added, making the total 6474. There were 3713 pamphlets. Thirty subscriptions of \$5 each had been received from members for the purchase of new books. With this fund a number of new works had been purchased, making a valuable acquisition to the resources of the library. It will thus be seen that the committee had had at its command about \$800.

1889

Nine new members were added to the list at this meeting.

The Committee on Increase of Membership presented a report through its chairman, Dr. Ashby. It noted that during the previous ten years the losses had about equaled the gains, so that whilst in 1879 there had been 198 members, in 1889 there were only 209. Furthermore, whilst the profession in the State, outside of Baltimore, about twice outnumbered the profession of the city, the great majority of members was

1889

from the city (172 city, 37 country). Considering the causes of this disparity, the committee found them in the excessive charges for membership and dues, \$10 being required for the former at the time of entrance and \$8 annually thereafter for the latter. A reduction was therefore recommended to \$5 per annum for city members and \$2 for country members. To enlist a heartier coöperation among country members, a semi-annual meeting was suggested in some one of the county seats of the State. These suggestions were adopted, with the proviso that they were not to go into effect until April, 1890.

The addresses were that by Dr. John Morris, President, on "Crime: Its Physiology and Pathogenesis—How Far can Medical Men Aid in its Prevention?" and the annual address by Professor Osler, on "The License to Practice." The former was a scholarly essay, brimful of learning and wit. Dr. Osler's theme was the burning question of the hour, for upon it depended the advance of medical education and the elevation of the standard of attainments in the profession; nay, more, the lives and health of the people at large demanded protection against the dangers of ignorance and quackery. But the profession is not a unit, and we have no right to expect Legislatures to recognize us to the exclusion of other classes of practitioners. In the eyes of the law we all stand equal, and the sooner we realize this the better for us. There were three courses, according to Dr. Osler, open: (1) The prevailing one, in which the college is the sole judge of the fitness of candidates; (2) a State Board to examine all candidates, whether holding diplomas or not; (3) the organization of physicians in each State and the appointment of representatives by each to a central parliament, having full control of all questions relating to medical education, examination and registration. Under the first, which has been tried and found

wanting, the chartered corporations controlling the profession are wholly irresponsible, without supervision by the State, the profession or the public. Under this system a large percentage of doctors are still graduated annually, after only two sessions of study, or eighteen months in all—eighteen months in which to master one of the highest, as it certainly is one of the most difficult, of the professions. There are sent out now, year by year, scores of men called doctors, who have never attended a case of labor, who are utterly ignorant of everyday diseases, who have never seen the inside of a hospital ward. But the handwriting is on the wall, and within ten years in scarcely a State will the degree carry with it the privilege of registration. The second plan was a decided improvement, and was already working well in several States. But Dr. Osler thought the Examining Board should be elective by the profession, and that its duties should be extended to embrace preliminary education, examination and registration of candidates for the license, and the control of all matters relating to discipline in the profession. The examiners at the preliminary test should be teachers, not doctors. It is not necessary or expedient to limit the examiners for license to those outside the schools, and in some of the more scientific departments it would be impossible to fill positions from outsiders. This plan was illustrated and successfully carried on in the Province of Canada, where in 1865-66 the profession became incorporated, and has ever since exercised the threefold prerogative above mentioned, and today the entire profession of the Province is proud of its Board. The latter possesses a magnificent building, where examinations are conducted, and where there are offices for registration and rooms for a library.

Among the twenty papers which followed the reading of the addresses, Dr. Coskery reported a case of abscess of the brain,

MEDICAL AND CHIRURGICAL FACULTY

1889

for which the skull was trephined; Dr. Jay, one of entire ex-section of the ulna, with resection of the humerus and radius; Dr. Welch read a paper on "Hydrophobia," and Dr. Christopher Johnston one on "Microscopy," etc.

The semi-annual meetings were resumed in the following fall, one being held at Hagerstown, November 12 and 13. The address of welcome was delivered by Dr. A. S. Mason and gracefully responded to by the President, Dr. A. Friedenwald, who said, among other things, that the meeting "had for its purpose the inauguration of a new era in its history, looking to the consummation of more intimate relations and a closer bond of fellowship between the medical practitioners residing in the various districts of the State." In point of attendance and work done this meeting seems to have been one of the most successful of the semi-annual meetings in the history of the Faculty, "one calculated to restore the Faculty to its pristine usefulness" (Report of Executive Committee, 1890). The profession of Washington County received the Society with open arms, and realizing the benefit of organization for itself also, founded a local society in Hagerstown. "The meeting at Hagerstown [continues the report] demonstrated most conclusively to your Committee that the semi-annual meeting is a most important feature of this organization, and should be perpetuated at every hazard. As a means of enlisting the interest of the profession of the State in the work of this Faculty it is simply indispensable. It presents the most ample opportunity for communication and intercourse between the profession of the State and of the city, by bringing them together upon terms of self-interest and of individual contact. Good will then result to the country practitioner and to his city brother by a better understanding and appreciation of their respective points of culture and professional training. Both classes will be stimulated to better work and to more harmo-

MEDICAL AND CHIRURGICAL FACULTY

nious action in professional organizations." The names of twenty-eight physicians from the western part of the State were recorded as in attendance, besides those from Baltimore, and papers were read by Drs. R. W. Johnson, Michael, Wm. Lee, Canfield, Joseph T. Smith, Winslow, Ashby, Preston, Earle and Chisolm.

1890. The annual meeting was convened at the Athenæum Building, April 22, there being 213 physicians present at the opening. After prayer the President, Dr. Friedenwald, delivered his address on "The Modern Hospital," the subject being suggested by the completion of the Johns Hopkins and City Hospitals during the year.

1890

The annual oration was delivered by Dr. Joseph Tabor Johnson, of Washington, D. C., in the presence of 327 physicians. His subject was "The Importance, the Alarming Frequency, the Wickedness, and Some of the Effects of Procured Abortion." The growth of this alarming evil, the importance of which overshadows the other questions of the day, was pointed out. In some States the native population is dying out, and legislators have found it necessary to investigate the causes of this depopulation. As far back as 1857 the American Medical Association appointed a committee to report upon criminal abortion, with a view to its suppression. The crime is unlimited in its scope, and there are facts to prove it is largely more prevalent in American than European cities. The country districts are not far behind the cities in their destruction of foetal life. Those who practice this nefarious business are everywhere known, indeed achieve a widespread fame, yet it is the universal experience that they are scarcely ever convicted. It is only in case of the death of the mother by some bungler that the indignation of the virtuous public and the

1890

majesty of the violated law are aroused. Nor is it the bad elements of society who submit to the operation. The best women in the land resort to it, and many who would be shocked at the idea after quickening, hold it to be justifiable prior to that event; yet a life is involved in either case. The law even makes a distinction between the periods of pregnancy, pronouncing it only a misdemeanor before, but a felony after quickening. The address concluded with an enumeration of the ill effects upon the morals and physical well being of those engaged in the nefarious practice, and an exhortation to physicians to use their influence and opportunities for its prevention.

From the Treasurer's report we note a still further falling off in the rent received from the societies, but the energetic Secretary, Dr. Taneyhill, was able to turn over at this meeting, as the result of the pharmaceutical exhibit, the handsome net sum of \$145. The State Veterinary Society had become a tenant of the hall at an annual rental of \$50, and the rent of the Baltimore Medical Association, owing to its inability to pay, had been reduced to the same amount.

The Library Committee had received during the year \$626.17 in all, including \$46 from Nurses' Directory. By the appointment of an assistant librarian the committee had been enabled to keep the library open from 12 m. to 7 p. m. daily, an arrangement which had given great satisfaction to those members making frequent use of the collection. Two hundred and forty-six volumes had been added, making the total number now 6720; 100 volumes of journals had been bound and the same number of journals were regularly received. The report on Nurses' Directory (now under charge of the Library Committee) showed increased confidence in and appreciation of the work of the Directory among physicians and laymen.

Although the receipts had fallen off and the number of nurses was smaller than previously, the standard had been considerably elevated, many indifferent ones having been gotten rid of, and others who had been trained in school and hospital substituted.

Ninety-two names were added to the membership of the Society through the energetic efforts of the Committee on Increasing Membership, aided by the lowering of the membership fee and annual dues, which had been effected at the previous meeting.

The large attendance at the daily sessions was a feature of the session, being 213, 327, 290 and 209, respectively, for the four days. On the evening of the third day the city members entertained the members from the counties with a banquet in the assembly hall. At a special meeting held on the third day action was taken upon charges preferred against Dr. J. H. De Wolf, who was, upon a report from the Committee on Ethics sustaining the charges, expelled from the Society.

A communication from the American Medical Association, on "Uniform Medical Legislation in the United States," was read by the Secretary, and on his motion was referred to the Executive Committee with discretionary power.

On motion of Dr. I. E. Atkinson, the following was adopted:

"WHEREAS, An effort is being made, with a reasonable expectation of success, to establish in Patterson Park a botanical garden, which, as an educational and ornamental feature of permanent improvement, will be most desirable;

"*Resolved*, That this Faculty, recognizing the science of botany in its important relation to the medical sciences, heartily favor the effort, and hereby endorse its importance as a valuable aid in medicine and pharmacy."

Thirteen papers followed the reading of the addresses.

MEDICAL AND CHIRURGICAL FACULTY

1890 The semi-annual meeting was held at Cambridge, Dorchester County, November 11 and 12. The Society was welcomed by the venerable Dr. Alexander H. Bayly, who acknowledged in fitting terms the appreciation of himself and colleagues of the compliment conferred in the selection of that city for "the first meeting of the Medical and Chirurgical Faculty ever held on the Eastern Shore since its organization." The admirable address of the President, Dr. Ashby, followed. Dr. Ashby spoke of "The Interests and Aims of the Medical and Chirurgical Faculty of Maryland." It was a handsome tribute to the founders of the Society, and an urgent exhortation to the profession of the State to organize thoroughly in order that they might increase their influence and power, and thus secure those advantages which other bodies have secured in that way. I make the following extract from this address, both because it will serve as a fair specimen of it, and because it conveys information of an historical event of some interest: "As a further outcome of this meeting in Hagerstown [he refers to the semi-annual meeting, held in November, 1889,] a convention of medical men from various sections of the State was held in the city of Baltimore on the second day of January last, and there and then determined upon an act of medical legislation which, with slight modifications, was passed by the General Assembly at Annapolis. This Act has passed into the history of the profession of this State. This is not a proper place and occasion to particularize in regard to its fate. I will say here that this Faculty, as such, was in no manner responsible for the Act or for the fate which overtook it. The Act originated in the convention as above stated, and its passage was urged by the almost unanimous sentiment of the profession in this State. Its death was brought about by a very small and narrow professional clique, which exercised a

very decided and malicious political power. A few men holding positions of trust in the dominant political party in this State found in the Act as passed by the General Assembly no position and no emoluments for a political appointee, and its destruction was not only sought, but obtained. This medical bill asked for no State appropriation to carry its provisions into execution and to keep its machinery in motion. It undertook to 'make brick without straw,' a seemingly unwise and irrational act in the eyes of the lover of the public soup house. It asked for the entire profession of the State the right to organize a Board of Medical Examiners, composed of reputable physicians and empower this Board with the authority to license all physicians who might enter upon the practice of medicine in the State, subsequent to the passage of the Act. Every necessary safeguard was thrown around the applicant's interests, providing for him a judicious and impartial examination. The Act aimed to protect the citizens of Maryland against incompetent medical practitioners. It was unjust towards none, it was fair towards all. We may vainly speculate as to the causes which induced His Excellency to withhold his signature from this bill, but I venture to say here, that whatever may have been the motive which dictated such a course of action, the decision reached by the Chief Executive of this State was not only disappointing to a large and influential body of citizens, but was a manifest and gross disrespect to the medical profession of Maryland. It is not my desire to impugn motives, or to be disrespectful towards the Governor of a great Commonwealth, who is sworn to protect the rights and interests of all classes of its citizens, but I am prepared to assert here that if there was anything in this Act unconstitutional or unjust, or in any way, shape or form con-

MEDICAL AND CHIRURGICAL FACULTY

1890 contrary to the best interests of the citizens of Maryland, I challenge the enemies of the bill to show it."

So well was this address received that it was resolved to print it in pamphlet form and distribute it to every regular practitioner of medicine in Maryland.

Eleven papers followed, all of great interest. Among operations reported was one of distal ligation of the right common carotid and subclavian arteries for supposed innominate aneurism, with apparent cure, by Dr. R. Winslow.

1891 1891. The annual meeting was held at the Athenæum Building, commencing April 28, about two hundred physicians being in attendance at the opening. An extensive programme of proceedings had been published for the convenience of members. The President, Dr. Ashby, read an address on "The Relation of the Medical and Chirurgical Faculty to Professional Organization in Maryland." The address was framed much upon the lines of that at Chestertown, already noticed, but it contained in addition a highly interesting sketch of the early work and struggles of the Society. With regard to the most pressing claims upon the Society at that time, the speaker said: "I assume that any attempt to revive the legal authority conferred by the charter is as impracticable as it is ill-advised. The Faculty is not now, in my humble opinion, in a position to inaugurate any movement looking to a renewal of its functions as a licensing body. There are other features appertaining to its work which claim more earnest consideration and demand more serious attention at this time. When these interests have been furthered, the Faculty can then, if it sees proper, advance a step forward and assert its influence in matters of medical legislation to far more eminent advantage. In my judgment, the most important work now before the Faculty is the work of

MEDICAL AND CHIRURGICAL FACULTY

1891

general organization of the medical profession in Maryland. This work implies that every effort should be made upon the part of the Faculty to enlist in its ranks and place on its roll the name of every worthy member of the regular school of medicine in Maryland. When this has been done, it will bring to its aid and purposes a material and moral force which will elevate the profession of this State to a position of usefulness and of respectability such as it has never before enjoyed. Other influences will at once flow from this result. Local medical societies in the counties and cities throughout the State will organize, professional pride and ambition will be stimulated, an interest in medical work and progress from a scientific standpoint and as a means of public advantage will increase, and not least the exercise of those courtesies and civilities which come from close professional intercourse and association will be promoted. A large and intelligent class of men bound by such fraternal relations as this Faculty can and should present, cannot fail to have the strongest influence over that class of men who repudiate its principles of work and ethics. The moral force and authority of thorough organization would reach beyond the limits of its own body."

In the evening the Faculty reassembled with a good attendance, this being the first night session held for many years.

Thirty-two new members were added to the roll.

The Treasurer reported that, notwithstanding the large increase of membership, the expenses had exceeded the income for the year by \$286.09 making, with the deficiency of the previous year, a debt of \$518.06.

The Library Committee reported that, owing to the reduction in the annual dues, there had been a net loss in the committee's income of one-fourth. The total receipts (including \$92.80 from Nurses' Directory) had been \$553.24. The reduction

1891

is explained by the fact that, in accordance with the rule then prevailing, new members paid no annual dues but only an initiation fee the first year, and as the Library Board had no share in the latter, no benefit accrued to it from the increased membership. In consequence of the small revenue, much embarrassment had been experienced in the conduct of the library. Through the generosity of members, however, 307 volumes had been added during the year, making the number 7027, exclusive of 840 duplicate volumes. Eighty-two journals were regularly received. The Nurses' Directory was meeting with success and the quality of nurses was much improved.

The "masterly" annual address of Professor Welch was one of the leading features of the meeting. It dealt with the recent investigations, chiefly bacteriological—regarding diphtheria, and the bearing of these upon the pathology, prevention and treatment of this most dreaded of all the infectious diseases. The discovery of its specific germ had shed more light upon this disease than that of any other affection, perhaps with the exception of tuberculosis. After presenting the evidence of the specific agency of the Klebs-Löffler bacillus, which had been slowly brought out since its discovery in 1883, viz: its constant presence in the lesions, its isolation in pure culture, the reproduction of the disease by inoculation of pure cultures and similar distribution of the organism in the experimental and natural disease, the properties of the organism were described. Diphtheria is without doubt local in its origin, and the bacillus is only found in the membrane, the constitutional symptoms being due to the toxic substance which it produces. The expired breath cannot convey the organisms, but if dried they may be inhaled. They are among the most hardy of the non-spore bearing bacilli. The toxin is a non-crystallizable, non-alkaloidal, non-volatile,

white, amorphous mass, probably proteid in character, soluble in water and of appalling potency. It is analogous to the venom of serpents. Injected in animals, it produces all the symptoms except the pseudo-membrane, the bacilli being necessary for this. It varies in virulence more than any pathogenic organism known, and this accounts for differences in severity of cases and epidemics of the disease. The bacillus offers a positive means of diagnosis of diphtheria. Not all pseudo-membranous inflammations of the throat are due to it; in those of early scarlet fever it is replaced by a streptococcus, and even in apparently primary cases it is not found. Notwithstanding some confusion, diphtheria "seems to me even now sufficiently well characterized as to its symptomatology, pathological anatomy and etiology to constitute a definite and independent disease, which need not be confounded with other diseases." It could not yet be decided whether "membranous croup" (local, non-contagious) existed independently of diphtheria. In many cases of pseudo-membranous laryngitis, the bacillus of Löffler had been found, and not only in the membrane, but on the mucous membrane of the pharynx when there was no membrane; in other similar cases the streptococcus alone had been found. Streptococcus and staphylococcus infection often complicates true diphtheria, and to this are due the broncho or aspiration-pneumonia, ulcerative endocarditis, suppurating glands, serous inflammations and erysipelas. The transmission of diphtheria from cats, cattle and fowls, and by the milk, was considered still *sub judice*. The prevention and treatment were considered in the light of the new discoveries. These included strict isolation, disinfection of room, discharges, etc., the avoidance of infected milk, cats, etc., prompt treatment of catarrhal conditions of throat, cleanliness of mouth and use of antiseptic

1891

mouth washes, gargles, etc., the providing of free sunlight and air, and in the absence of any antidote, supporting measures.

We were just on the eve then of the discovery of the diphtheria antitoxin, and it is interesting to read the following in Professor Welch's address: "The interesting experiments of Behring and Kitasato upon the production of immunity against tetanus and diphtheria encourage us to hope that we may in time come into the possession of direct antidotes to the chemical poisons of these diseases. These experiments have shown that the blood and the blood serum of animals naturally, or rendered artificially, immune against diphtheria, possess the remarkable property of neutralizing or destroying the toxic substances produced by bacilli diphtheriæ, and that immunity depends upon this property. The same is true of tetanus. Whether or not any therapeutic application in human beings can be successfully made of this property of the blood of immune animals has not yet appeared." Again: "The new light has not yet penetrated into all of the dark corners, but when we consider what has been gained in less than a decade we are justified in expecting that here also obscurity will disappear, and that diphtheria will become in all respects one of the best understood, and, we may hope, one of the most successfully combated of the grave infectious diseases."

The papers and reports of the meeting were of unusual interest. In the Section on Obstetrics Dr. Michael read a paper on "Obstetrical Antisepsis," and gave the statistics of the Free Lying-in Hospital, where there had been 308 cases without a septic death. Bichloride of mercury was the antiseptic favored, a 1-1000 solution for hands and genitalia and a 1-4000 solution for ante and post-partum douche. Dr. Rohé reported the details of a second hundred cases at the Maternité (his first series having been presented at the annual meeting of 1890).

The total of cases treated at this hospital was 377, and in these there had been no septic death. The bichloride was also used here. Dr. William S. Gardner, from observations made at the Maternité, proved that there was no such thing as milk fever in the normal puerperium, lactation influencing to an appreciable extent neither pulse nor temperature. Quotations from leading text-books showed that the doctrine was therein taught. Dr. H. Newell Martin read two papers, "Recent Discoveries in the Physiology of Ganglion Cells," and "Vaso-motor Nerves of the Heart." Dr. J. C. Hemmeter read a paper on "Effects of Certain Drugs on the Velocity of the Blood Current." One of the most valuable of the reports was that of Dr. Hiram Woods, on "Blindness in the United States."

1891

A semi-annual meeting was held in the fall at Rockville, Montgomery County. The attendance was twenty-seven. The address of welcome was made by Dr. E. E. Stonestreet, on behalf of the Montgomery County Medical Society. The President (Professor Welch) delivered an address on "The Bacillus Coli Communis." Among the local physicians who read papers were Dr. Edward Anderson, "Typhoid Fever," and Dr. Charles E. Stone, "Early Diagnosis and Operation in Osteo-sarcoma of the Lower Bones."

1892. The annual meeting was held at St. Paul and Saratoga Streets. At the opening, April 26, there were about two hundred physicians. The volume of the year was considerably cut down in size from previous years, numbering but 124 pages, while that of the previous year numbered 397. The reason for this reduction was stated to be "scarcity of funds." All papers read before the Society were omitted except the President's address. The annual oration, delivered on the evening of the third day by Dr. Frederick E. Lange, of New York City,

1892

1892

had to be omitted, as all efforts to secure a copy of it from the author failed. Its subject was "The Pathology and Treatment of Acute Spontaneous Osteomyelitis." The reason for this curtailment appears in the Treasurer's report, which shows a deficiency that had now grown to the large sum of \$959.52. This plan of publishing only the two chief addresses, the reports of officers and committees, and the minutes, has been continued to the present time, the funds being needed for, and as was thought better applied to, other uses. It must not be supposed that this indicates an indifference or lethargy on the part of the Society, for, as will appear, the latter has never in all its history shown such vitality and energy as during the last seven years, which have witnessed such wonderful changes and development in our ancient organization.

Dr. Christopher Johnston presented to the Society bronze busts of Nathan R. Smith and John Buckler, which had belonged to his father. A committee of five was appointed, at the request of the Secretary-General of the Pan-American Medical Congress (held in Washington, D. C., in 1893) to cooperate with that body in furthering its interests and purposes. A committee of nine was appointed to nominate seven members to constitute the Board of Medical Examiners of the State of Maryland, in accordance with the Act passed by the Legislature at its recent session. The names brought in by this committee were Drs. Samuel T. Earle and William F. Lockwood, of Baltimore; Dr. F. B. Smith, of Frederick; Dr. William F. Hines, of Chestertown; Dr. James Bordley, of Centreville; Dr. J. McPherson Scott, of Hagerstown, and Dr. W. W. Wiley, of Cumberland. To these gentlemen was entrusted for the next four years the responsibility of inaugurating and carrying to a brilliant success this important work. How well they and their successors have discharged their duty is well known

among us, for they have reflected the highest credit upon our Society and State. They have given their time and services without reward, and have exhibited in the execution of their task intelligence, courage and zeal of the highest order.

The good work of the Committee on Increasing the Membership continued, and with the aid of other members, and especially through the circular sent by the Recording Secretary to the 1383 regular practitioners in the State, resulted in adding to the membership 128 new names. An amendment to the Constitution was adopted giving to the support of the library one-half of all initiation fees and annual dues.

Resolutions were adopted recommending to the Mayor and City Council the advisability of at once adopting some approved system of steam disinfection under pressure in place of inefficient methods then in vogue, and a committee of five was appointed to present the same to the city authorities.

A very important action taken at this meeting was the proposal of amendments to the Constitution by the Executive Committee doing away with the Sections. The Executive Committee was increased to seven, including the Recording Secretary and Treasurer as *ex officio* members. The Committee on Programme was entrusted with the duty of procuring papers to be read at the annual and semi-annual meetings.

The Treasurer's report pointed out the necessity of retrenchment and economy. The Library Board discussed "the hampered condition of the finances," notwithstanding which they had been able to continue to keep the room open for six hours, with a librarian and assistant in attendance." The committee had received \$519.36, or \$123 less than the appropriation, the debts of the Faculty forbidding the payment of the full amount. The Nurses' Directory (under control of the committee) was in a flourishing condition, having sixty-one nurses

MEDICAL AND CHIRURGICAL FACULTY

1892

on the roll, of whom sixteen were graduates of training schools and nine of a Maternité. The demand for nurses had exceeded the supply. Notwithstanding the general profession still refrained from resorting to the Directory, the revenues from the latter had for some months paid the salaries of both librarians and registrar.

One cannot but admire the energy and ceaseless activity of certain members at this time in behalf of the interests of the Society. They seemed to vie with each other in the effort to raise funds, to secure new recruits and to advance in every way the welfare of the organization. One of the fruits of this zeal was the receipt of \$160 at this meeting from the exhibition of drugs, etc. For that welcome aid to its resources the Society was, as in previous years, indebted to its Secretary, Dr. Tancyhill.

Allusion was made in the Executive Committee's report to a reduction which had been threatened during the year in the appropriations made by Congress to the library of the Surgeon-General's office. This was considered of such importance that a special meeting of the Faculty had been called to protest against it and resolutions were adopted and mailed to the members of the Senate and House of Representatives from Maryland. It may be added that through these and other similar exertions the misfortune of a reduction of appropriation to this great collection was averted.

As has been stated, the only address published in the volume of this year was Professor Welch's, the subject of which was "The Etiology of Acute Lobar Pneumonia, considered from a Bacteriological Point of View." The subject was treated in a way similar to the address of the same physician on diphtheria, delivered at the previous annual meeting. The address had a peculiar interest for the members of the Faculty, because Dr.

CHARLES A. WARFIELD

1751-1813.

Sternberg, the discoverer of this bacillus, first made known his researches through this Society, at the annual meeting in 1881. Dr. Sternberg discovered the bacillus in September, 1880, at New Orleans, by inoculating rabbits with his saliva. He thus isolated a micrococcus, "the coccus of sputum septicæmia." Three months later Pasteur found the same organism by inoculating the saliva of a child dead with hydrophobia into rabbits. Neither at that time knew of its relationship to pneumonia. It was reserved for Fränkel, in 1886, to recognize its causal relations to that disease. Of the various names applied to it by different investigators, Dr. Welch preferred that of micrococcus lanceolatus, indicative of its oval shape, with one end more tapering than the other, like the flame of a candle. The name diplococcus pneumoniæ, expressing the arrangement in pairs, is objectionable, because it is concerned in the causation of other diseases besides pneumonia, as cerebro-spinal meningitis, pleurisy, pericarditis, peritonitis, endocarditis, nephritis, enteritis, parotitis and arthritis, and doubtless many other local inflammations. It is non-motile, never forms spores, is surrounded by a clear gelatinous capsule, which can be stained with various aniline dyes. One of its most striking features, both in the animal body, and especially in cultures, is its short viability. It varies greatly in its degrees of virulence. It produces a toxic substance ("pneumotoxin"—*Klemperer*), of the chemical constitution of which we know very little. To this toxin are due the diffuse fatty and parenchymatous degenerations, which were formerly attributed to high temperature. Both clinical experience and the bacteriological study of the disease support the view that in the majority of cases the grave constitutional manifestations are due to toxins circulating in the blood and acting injuriously on the respiratory centres and other parts of the nervous system, on the heart, the kidneys and other parts.

MEDICAL AND CHIRURGICAL FACULTY

1892

The organism is a frequent inhabitant of the mouth in health, occurring, in the virulent state, in the mouths of fifteen to twenty per cent of healthy adults and in the mouths of those who have recovered from pneumonia in the proportion of sixty-six per cent.

With regard to securing immunity in man by the inoculation of serum or cultural bacterial products, Professor Welch said: "We are in the midst of a period of active experimentation, revealing new and unexpected facts and points of view concerning this whole subject, and it would be hazardous to pass any verdict at the present moment."

The following paragraph, the concluding one of the address, shows the state of confusion in which the treatment of pneumonia stood (and still stands), and conveys a valuable hint to the clinician: "Even if it were in our power to arrest the hyperæmia and exudation of leucocytes and other products of inflammation, we should confer a very doubtful benefit upon the patient, unless at the same time we injured the bacteria. It is very likely that in so doing we should rob nature of a weapon which she is using as efficaciously as possible against these invading micro-organisms. It is doubtless often a fortunate thing for the patient that it is not within the power of the physician to accomplish what he considers to be indicated in the way of treatment."

The semi-annual meeting for the year was held at Easton, November 15 and 16. There were forty-five physicians in attendance, and the address of welcome was delivered by Dr. E. R. Trippe. Eighteen papers were read on a variety of subjects, and elicited interesting discussions.

1893

1893. An important special meeting was held on January 30, the objects of which were to urge upon Congress to continue

the annual governmental appropriation for the publication of the Index Catalogue of the Surgeon-General's Library, and to take more decided action regarding public health. Resolutions upon the former subject were adopted upon the motion of Dr. I. E. Atkinson. They protested most earnestly against the withdrawal of the appropriation for this magnificent publication, "which is a complete bibliography of medicine and an object of especial interest and pride to the medical profession." It was stated that thirteen volumes of the work had already been published and three only remained to complete it. The resolutions were ordered to be sent to the representatives in Congress from Maryland. Discussion developed the fact that several of the officers of the Faculty had already telegraphed to members of Congress on the subject. That those efforts had an important bearing upon the result we cannot doubt; at any rate, a restoration of the appropriation followed this prompt and vigorous action.

In regard to the other matter, allusion was made to the partial success already secured in the establishment of a permanent disinfecting station, and the encouragement thus afforded to press on in the same lines. The question of the introduction of infectious diseases, and especially cholera, which had prevailed extensively in Europe the previous summer, was also now pressing upon the attention of the community, and the Faculty could not be behindhand in participating in it. In accordance with this view, the following resolution, offered by Professor Welch, was adopted:

Resolved, That an Advisory Committee on Public Health be appointed by the President of this Faculty. This committee shall consist of seven members, including the President. It shall be empowered to consider matters relating to public health and the protection of our city against the importation and

1893

spread of infectious diseases. It may consult and act with the Commissioner of Health, and with committees and representatives of other organizations in regard to these matters."

A special meeting was also held on February 8 for the purpose of urging upon Congress a suitable bill enlarging the powers of quarantine officers, but as a satisfactory bill had been passed since the calling and convening of the meeting, all that remained to be done, after discussing the subject, was to endorse this National Quarantine Bill, and especially to thank Hon. Isidor Rayner, our M. C., for his good work in urging it to a successful issue.

The annual meeting was held at the Athenæum Building, with a very large attendance. This was the last meeting at which "Section" reports were presented, the Sections being now done away with. For fifty years this plan had prevailed, beginning in the 30's with an annual report on the progress of medicine and developing into a similar report from each branch. It was now urged that this method was antiquated, and involved unnecessary loss of time. In former times, when means of communication and access to literature were limited, such *résumés* were helpful, but now this information could be readily obtained from numerous sources, so that the yearly reports were no longer a necessity; in fact, were unprofitable and stale. This view was adopted, and in place of Sections a Committee on Programme was created, whose duty it should be to provide for adequate volunteer papers and discussions.

The following were the abolished Sections: 1, Surgery; 2, Practice; 3, Obstetrics and Gynæcology; 4, Materia Medica and Chemistry; 5, Sanitary Science; 6, Anatomy, Physiology and Pathology; 7, Psychology and Medical Jurisprudence; 8, Microscopy, Micro-chemistry and Spectral Analysis; 9, Ophthalmology, Otology and Laryngology.

At this meeting, in accordance with a resolution previously adopted, a discussion had been arranged by the Executive Committee on "Puerperal Infection, with Special Reference to Auto-Infection," the referees being Drs. Michael on etiology and prophylaxis, J. Whitridge Williams on bacteriology, and Ashby on clinical history and treatment. The result of this new departure, which was in accord with the spirit of the times, was a series of valuable papers and a discussion, participated in by Drs. Brinton, Gardner, Neale, P. C. Williams, Bond, Schaeffer and Hill.

Under the head of miscellaneous business a letter was read from the Ministerial Union of Baltimore asking the appointment of a committee to coöperate in exerting an influence for "moral reform." In accordance with the request a committee of three was appointed. Thirty-four active members were added to the roll and the following were elected to honorary membership: Joseph Tabor Johnson, M.D., of Washington, D. C.; Frederick Lange, M.D., of New York, and Reginald H. Fitz, M.D., of Boston. The following resolution, recommended in the report of the Library Committee, was adopted: "That a committee of fifteen be appointed by the outgoing President to consider the ways and means of a permanent location for the Faculty." On motion of Dr. Taneyhill, it was ordered that said committee report at a called meeting, when they have suggestions and matured plans to report. These resolutions have an importance in view of the fact that they represent the first step in the movement resulting in the securing the present building of the Faculty, on Hamilton Terrace. The pharmaceutical exhibit brought in the sum of \$155. The Treasurer's report showed a deficit, handed down from the previous year, of \$559.52. The receipts and expenditures each amounted to \$2196.90. The following items appear in the Treasurer's report:

MEDICAL AND CHIRURGICAL FACULTY

1893

From rent of hall (including telephone), \$351; advertisements in Transactions of 1891, \$65. The so-called conversation room and committee room of the building had been rented to Drs. C. Hampson Jones and W. F. Smith for the use of their classes, at \$140 per annum. It appears from the Recording Secretary's report that a preliminary circular of this meeting had been drafted by the chairman of the Executive Committee, Professor Welch, and 1200 copies of the same sent out to physicians of the city and State, not members of the Faculty, presenting the claims and advantages of the Society to them. The results in membership had been highly satisfactory. The receipts of the Library Committee had been \$840.04, including \$120.88 from the Nurses' Directory. Fifty journals were received, and there had been donations of 220 volumes; new books had been purchased to the amount of \$32. The committee suggested that "the library would be much more useful if situated in a more accessible location, and the Nurses' Directory would also bring in a much larger income under such circumstances."

There are two important reports in this volume (if volume it can be called—it is little more than a good-sized pamphlet), one being on preventable blindness, the other on infectious hospital and disinfecting plant. Ophthalmia neonatorum, the chief cause of blindness, was traced to the ignorant and careless midwife, although physicians are not blameless. A law to regulate the practice of midwifery in Maryland was badly needed. All women applying for a license to practice midwifery should show their qualifications to handle normal labors. They should also be required to report promptly to a physician, or the health authorities, all cases of ophthalmia neonatorum. The committee recommended that a law should be drafted regulating the practice of midwifery and brought before the next Legislature under the sanction of the Faculty.

The Committee on Infectious Hospital and Disinfecting Plant reported that they had joined forces with the Charity Organization Society, and a number of business organizations had been invited to join these in urging the matter upon the Mayor and City Council. By these an ordinance had been framed providing for an appropriation by the City Council of \$35,000 for the hospital for infectious diseases and \$10,000 for the disinfecting plant; also, making certain recommendations regarding their construction, etc. The joint Committee on Public Health from the City Council was also interviewed, and by these various efforts, principally devolving upon the Committee of the Faculty, the passage of the ordinance had been effected, and being subsequently signed by the Mayor, it had thus become a law.

The two published addresses were those of the President, Dr. Tiffany, and of the annual orator, Dr. Reginald H. Fitz, Hersey Professor of Practice in Harvard University. The former chose for his subject "The Treatment of Facial Neuralgia by Excision of Intra-cranial Portions of the Fifth Nerve." The operation was that of Hartley, consisting of division of the second and third branches of the nerve and removal of the Gasserian ganglion by opening the head in the temporal region and turning the flap downwards. In three of four cases operated on by Dr. Tiffany, relief was complete and permanent; in the fourth case the patient had not been seen since the operation and the result was not known. The patients were left with areas of skin anæsthesia over the right temple and cheek, but these areas still appreciated sensations of heat and cold in two of the three cases whose history was known. The sense of taste was not lost. There was no disturbance of function or nutrition in the eye. In two cases the meningeal artery was torn in making the bone flap, and had to be tied. The muscles of

1893

mastication were paralyzed, but there were no trophic changes. The operation was long, but recovery was rapid and complete. The wounds healed at once, except in one case, where the patient scratched the wound and infected it. "By leaving intact the motor branch of the third division the patient would not have food collect in the cheek of the paralyzed side, and in future operations an effort should be made towards this end."

Professor Fitz discussed the differential diagnosis of the various forms of intra-peritoneal hemorrhage and their treatment. In opening his address he referred to the fact that Harvard had been obliged to seek aid from us, having called Professor Councilman to its chair of pathology and Professor Howell to that of physiology. Referring to the approaching inauguration of our great Medical School, he said: "It is for your University to establish and elaborate the model American medical school of the coming generation. * * * However high may be its standard, it can be none too high for other schools to strive for. The success of its efforts lies in the hands of such organizations as your honored Society, and of kindred societies throughout the land."

The semi-annual meeting was held in the fall of the year at Annapolis. Through the courtesy of Gov. Frank Brown the sessions were held in the Senate Chamber. The attendance was fifty-five, the largest on record at any meeting ever held in the counties. The address of welcome was made by Dr. Abram Claude, who in the course of it referred to his fifty-five years of professional life at the Capital. Twenty papers were read and animated discussions held, the Governor participating in the latter.

It seems a great pity that the Faculty has not been able to preserve in its archives copies of these and other valuable papers read before it. Since 1891 no papers other than annual addresses have been printed in the annual Transactions, and hence

those not appearing in some journal have been lost to us forever. When we think how regrettable is the loss of the contributions made at the early meetings of the Society, from a failure to publish them, we can conceive of the feelings with which our successors in the next century and later will contemplate our neglect. If not published in full, certainly abstracts of them should appear.

The Naval Academy was visited by invitation, and a banquet was held on the evening of the first day at the Maryland Hotel, at which forty were present.

The President, Dr. Rohé, made an address in which the following expressive paragraph occurred: "A legitimate object of organization is to use it as a power to secure legislation, not legislation for our benefit as physicians, but legislation for the public good. The medical profession wants nothing for itself from the Legislature. The legislation in which the profession is interested is such as will be for the benefit of the whole people. Public health laws, medical registration laws, lunacy laws, were all intended for the good of the public, although always originated and their enactment promoted by the efforts of physicians."

As the result of attention being brought to the subject of the care and treatment of the insane, in papers on these subjects read by Drs. Preston and William Lee, a resolution was adopted appointing a committee to consider the matter and bring it before the Legislature and Governor, with a view to obtaining action upon it. The committee consisted of twenty-two members from Baltimore and most of the counties.

A formal request was received from the New York Academy of Medicine, asking the coöperation of the Faculty in securing the passage by Congress of a Bill to establish a Bureau of Public Health within the Treasury Department of the United States,

MEDICAL AND CHIRURGICAL FACULTY

1893 proposed by the National Quarantine Committee of the New York Academy of Medicine. A committee of nine was appointed with instructions to use efforts to secure the passage of the bill, and a copy of the resolutions was ordered to be sent to the members of Congress from Maryland. Dr. Welch, the mover, stated that the bill was very important and had been framed with great care and with reference to the national government and the rights of the States.

A committee of five was appointed to confer with the State Licensing Board in suggesting such modifications in the law regulating practice in the State as should be found necessary.

In response to an invitation from the Medical Association of the District of Columbia to the seventy-fifth anniversary of the founding of the same, in February, 1894, Dr. Ashby was appointed the representative of the Faculty upon that occasion.

1894. With the ninety-sixth annual session the Society began to exhibit extraordinary vigor, and it may now be said for the first time to have taken on the full panoply of its strength and to have begun to wield the full share of the influence to which it is entitled by virtue of its character and numbers. The session began at the Athenæum Building with a large attendance. The special subject chosen for discussion was the "Treatment of Empyema," Dr. C. W. Mitchell taking the medical side and Dr. Tiffany the surgical side. Eight other members joined in the discussion. Thirty-four active members were added to the roll and two honorary, viz: Dr. H. Newell Martin, of Cambridge, England, and Dr. James T. Whittaker, of Cincinnati, Ohio.

The following amendment to the Constitution was adopted: "That we create an additional standing committee whose duty it shall be to recommend and urge municipal, State and national

legislation in the interests of the health of the people and of the medical profession."

A question arose regarding the eligibility of candidates who had graduated since 1892, but had not passed the State Board, whereupon the Society declined to admit to membership such persons.

The Committee on Blindness was converted into a board for the enforcement of the law.

On motion of Dr. Ashby, it was

"Resolved, That a committee of five be appointed by the chair to devise ways and means for celebrating the one hundredth anniversary of the organization of the Medical and Chirurgical Faculty, commensurate with the honor, dignity and importance of the occasion."

By the Treasurer's report we learn that the liabilities of the Society were \$893.82. The Library Committee had had at its disposal \$859.52, \$83.05 of this amount being derived from the Nurses' Directory. Twenty-six books had been bought and 110 volumes had been added by donation. The pharmaceutical exhibit yielded at this meeting \$120.

The first report of the Board of Medical Examiners appointed by the Medical Act of 1892 is given in the volume of Transactions of this year. The Board had organized on the second of June, 1892, and the various subjects had been assigned to the members for examination, but although advertised, there were no applicants for license that year. Examinations were held in April and June, 1893. At the first there were 39 applicants, of whom 36 were licensed, and at the latter 9 of 15 applicants were successful. A number of those applying were debarred by reason of not having studied medicine three years and not having attended three courses of lectures. An amendment to the Act of 1892 had been adopted in 1894, so as

1894 to provide for a general official registration of all physicians practicing in the State, on or before the first day of June, 1892. This registration was directed to be made in the Circuit Courts of the counties or of Baltimore City. Until this amendment, which had received the approval of committees from the Medical and Chirurgical Faculty, the Examining Board and the State Homœopathic Society, had been passed there had been no means of determining the number of physicians who had located in the State since April 2, 1892, and who had been practicing illegally. There was no doubt, the Board said, that many to whom the law applied had practically ignored it, and this was due mainly to vagueness in the law itself.

The presidential address (Dr. Rohé) was upon "The Extinction of Tuberculosis." In introducing it he took occasion to speak of some of the recent achievements of the Society. "During the last session of the General Assembly," he said, "three measures were considered, in which the medical profession was interested, and which had their origin in committees appointed by this Faculty. These measures were: the amendment to the Medical Practice Act, the bill for an additional hospital for the insane, and the Act for the prevention of blindness in infants. Each of them passed in essentially the shape in which it was recommended by the Faculty through its appropriate committees. Having watched the progress of these measures through the Legislature, I believe I may say that not one of them would have passed in satisfactory form if the members of the Legislature had not been impressed by the fact that the organized profession of the State, as represented in this Faculty, endorsed and supported them." Dr. Rohé sums up the practicable measures for the restriction of tuberculosis as follows: Compulsory notification by physicians, householders, managers of institutions, etc., disinfection

of premises vacated by recovery, death or removal of patients, the furnishing of concise instructions for the guidance of patients and those coming in contact with patients, the employment of inspectors to visit cases, give instructions and disinfect apartments if necessary, the establishment of special hospitals and wards in general hospitals for the treatment of patients, and the change and disinfection of all bed linen, etc., liable to infection, on railways and steamships. The isolation of patients is not necessary. When the material containing the tubercle bacilli—in these cases the sputa—is destroyed the consumptive is no longer dangerous to his most intimate associates. In conclusion he said: "No one who studies the question without prejudice can resist the conviction that tuberculosis, 'the great white plague,' is a preventable disease; that by concerted action on the part of physicians, sanitary authorities and the public, it can be stamped out among all civilized peoples. That, like leprosy and the black death, it should be of interest in the future merely to the historian of human progress."

The annual address, by Dr. James T. Whittaker, of Cincinnati, dealt with the "Predisposition to Phthisis," and considered in the light of modern investigations the various explanations that had been given of the nature of this assumed state, as the paralytic thorax of Hippocrates, for example. He rejected heredity, for of transmission from the father through the spermatozoa, which alone can constitute an indisputable heredity, there is no proof at all, whilst with regard to the mother, transmission at conception, that is, with the ovum, has no evidence in its favor, and placental infection has been shown to be of extraordinary rarity. The theory of a predisposition is undemonstrable, superfluous and dangerous, and like predestination in religious belief, it robs the sufferer of the hope of rescue. Whatever weakens and degrades the body in any way favors

1894

the development and dissemination of all diseases, and in this sense alone can we admit a predisposition to phthisis. As there is no predisposition to phthisis, there is no immunity from it. Everybody is liable to it. The tubercle bacillus is the one overshadowing fact in the whole history of this disease. Tuberculosis is acquired by infection alone, and the only thing that is infectious about the patient is his sputum, the destruction of which is simplicity itself. This address was able and comprehensive and is well worth a reperusal by all.

The revised fee-table follows the address.

At a special meeting held May 22 a proposed reduction of the annual appropriation made by Congress to the library of the Surgeon-General's office, at Washington, was brought up. The House of Representatives had already voted to reduce the amount from \$10,000 to \$7000. This step, so detrimental to the interests of the library, was opposed, and a memorial was presented to the Senators and Representatives from Maryland, in favor of retaining the regular appropriation. It was pointed out that it would be impossible to purchase all the journals and books needed, and to maintain the collection in its former efficiency upon a reduced amount. "This library," says the memorial, "has become an object of special interest and pride to the whole medical profession of the country, it having, by wise management and generous governmental support, developed into one of the greatest medical libraries in the world (if not the greatest), and it being of the widest usefulness and benefit to physicians throughout this country, and especially so to those of this State by its ready accessibility." The effort was successful and the appropriation restored.

The semi-annual meeting was held on November 21 and 22, at Cumberland, with an attendance of forty. Papers were read by Drs. Salzer, Randolph, H. Friedenwald, Craigen, R. Winslow,

MEDICAL AND CHIRURGICAL FACULTY

Preston, Osler, I. E. Atkinson, Ashby, R. W. Johnson, Schaeffer, Brush, Fort, Carpenter, Canfield and Welch. In connection with the last, the author urged the establishment of a bacteriological laboratory for the city, and a committee was appointed to exert its energy to secure it.

1895. On the twentieth of March the Faculty was convened in special session to consider the report of the Committee on Permanent Location. After most careful consideration this committee had reached the conclusion that it would promote the best interests of the Faculty to secure a permanent home in a section of the city most accessible to a majority of its members. They recommended the purchase of a three-story dwelling house fronting 25 feet on North Eutaw Street, with a lot extending back some 150 feet to Linden Avenue, on which was located a building bringing in a rental of \$120 per annum. To meet the expense connected with the purchase, improvement and maintenance of the property, it was recommended that the dues be raised to \$6; that a loan of \$100 from thirty members of the Society be secured, and that a mortgage be placed upon the property. To provide for its proper management, it was further recommended that "a Board of ten Trustees be appointed by the President, in whom the management and disposal of the property shall be vested, the first Board to draw lots as to terms of office, the shortest term being one year and the longest being ten years, the Board being so arranged that one member shall retire annually and one be elected annually by the Faculty, said Board to have authority to fill vacancies from death or resignation whenever such vacancies occur." The suggestions of the committee, after full discussion, were adopted, and on April 18 following the building 847 North Eutaw Street (which was selected as more eligible than that first contemplated, being two inches wider) was purchased in the name of the Faculty

1895

MEDICAL AND CHIRURGICAL FACULTY

1895 for \$10,000 in fee. There was no difficulty in raising the loan, the members promptly subscribing to it.

The ninety-seventh annual session (the last held there) convened at the hall, corner of St. Paul and Saratoga Streets, on April 23, 1895. The subject chosen for discussion was "Typhoid Fever in Country Districts," and was opened with a paper by Dr. Osler, who was followed by Drs. Charles M. Ellis, and Clotworthy Birnie, co-referees. A number of members participated in the discussion that ensued, and the authorities of the cities and counties of the State were urged to adopt means for the compulsory notification of cases of the disease to their respective Boards of Health.

Amendments to the Constitution were adopted, making the annual dues for city members \$6, instead of \$5; those for county members remained at \$2. It was provided that in future the appropriation to the library should be determined by the Executive Committee at its first meeting each year, upon estimates submitted by the outgoing Library Committee; that the Trustees should furnish an annual statement of their receipts and expenditures, and that no one graduated since June, 1892, should be eligible for membership unless he had passed the examination of the State Board. A motion was passed urging the Mayor and City Council to further the establishment of free public baths. A committee was appointed to see to the enforcement of the law regulating the practice of medicine, with authority to employ an agent for the detection of violators, and counsel for their prosecution. To meet expenses the State Licensing Board was instructed to turn over to this committee all its surplus funds. This committee found it necessary later to appeal to the members for special subscriptions to their expense fund, and also to have a resolution adopted directing the Committee on Legislation to procure such amendments to the Medical

MEDICAL AND CHIRURGICAL FACULTY

1895

Practice Law as were deemed necessary for the prosecution of violators.

The Treasurer reported the disbursements for the year \$1886.67, and a deficiency of \$701.62. There were unpaid dues amounting to \$700.

The number of volumes in the library was reported to be 9250, of which 1025 were duplicates. The number of journals received was 68; reports and transactions, 51. The receipts of the Library Committee had been \$538.62, and expenses \$628.37, the chairman having advanced the amount of the difference; \$71.30 had been contributed by the Nurses' Directory. The committee called attention to the fact that they had received less than half the appropriation of 1894. The privileges of obtaining books from the Surgeon-General's Library had been withdrawn.

The Committee on the Prevention of Blindness reported that a circular letter had been issued to the midwives of the city, calling attention to the law requiring a report of cases of ophthalmia neonatorum, and in consequence there had been a very general compliance on their part with its provisions. Cases had been reported at the health office and eye hospitals. The committee had found that the duty of seeing to the execution of the law, which they had supposed would devolve upon the State's Attorney, devolved upon themselves. Nevertheless, they were willing to assume it, and to investigate any cases that were brought to their attention.

Twenty-three names were added to the membership. Thirty-two papers were read, including that of the President, Dr. Robert Johnson, and the annual address. Of the latter the subjects were, respectively, "Pernicious Delay in Surgical Cases," and "The Causation of Nervous Disease." Dr. M. Allen Starr, of New York, in his annual address, first con-

1895 considered the intimate structure of the nervous system in the light of recent investigations. Within two or three years Nissl, by a peculiar method of staining, had shown the actual structure of the nerve cell. To the various forms of cells with their branches—protoplasmic and axis-cylinder—the name “neuron” had been given. The functions of the various forms of neurons, with reference to motion, sensation, vascular supply, nutrition, etc., as far as they had been investigated, were in turn considered, and also the effects of their stimulation. “The essential lesion in functional and organic diseases of the nervous system is a change, temporary or permanent, in the chemical and physical condition of the neuron. This change is the same in kind, whatever the cause. Such a change may be produced by overwork, by imperfect nutrition or by active poisoning from toxic agents produced within the body, or from toxic agents of an inorganic or organic type received from without, the last named being in many cases germs or their products. Such a classification of the causes of nervous diseases has a great therapeutic significance.”

The semi-annual meeting of 1895 was held in Belair, November 19 and 20. Twenty-six physicians attended, and papers were read by Drs. J. N. Mackenzie, Woods, Hundley, A. K. Bond, Platt, Earle and Russell.

A special meeting of the Faculty was held on December 14, to take action on the death of the President, Dr. J. Edwin Michael, which had taken place seven days before, from Bright’s disease. Dr. Michael was a man of powerful physique, of great intellectual strength and great force of character. He died in the prime of his powers at the age of 47.

1896 1896. The great event of the year was the opening of the new hall at 847 North Eutaw Street, “Hamilton Terrace,” on January 11. The cost of this property, which was secured

through the instrumentality of the new Board of Trustees, in whom the management and disposal of the property of the Faculty was now vested, was \$10,000, in fee, of which \$3000 were paid in cash and a mortgage given to the owner for the remainder at five per cent. To meet the cash payment and other expenses a call was made upon the members for a loan. A liberal response was given, \$3485 being secured from forty members. Most of this was shortly afterwards donated, and other donations to the amount of \$1155 were received from members of the Faculty. The Faculty had the good fortune also at this time to come into possession of \$2417.76, the balance remaining over of the fund collected the previous year for the entertainment of the American Medical Association. The Clinical Society also very generously gave the \$1000 it had saved up during a number of years. These various sums, which hardly could have been looked for at first, sufficed to put the Society well on its feet in its new possessions.

Soon after the purchase it was realized by the Trustees, to whose zeal and labors at this time we owe lasting obligation, that the property needed a thorough remodeling. Repairs were made to the old building, including shelving and furniture, amounting to \$1213.09. The old buildings in the rear were pulled down and a large two-story assembly hall was erected, extending from the main building back to Linden Avenue. The first story of this hall was designed for kitchen and banquet room (the latter to be used also during the annual meetings for exhibit room); the second floor contained the assembly rooms, with a capacity of between 300 and 400 seats. The erection of the assembly hall, with other expense connected therewith, involved an outlay of about \$3500.

The opening of the Faculty's new home, justly regarded as a day of note in its career, was celebrated with due formalities.

MEDICAL AND CHIRURGICAL FACULTY

1896

The exercises opened at 8 p. m. with brief remarks by the President, Dr. Charles G. Hill, and the Chairman of the Board of Trustees, Dr. L. McLane Tiffany. The Treasurer of the Board, Dr. Thomas A. Ashby, made a financial statement, after which the orator of the occasion, Dr. James R. Chadwick, of Boston, delivered an address, entitled "Medical Libraries: Their Development and Use." After speaking of the absolute necessity of libraries to the medical profession, he pointed out some of the means by which they can be built up, illustrating his remarks by reference to a chart showing the growth of the seven leading medical libraries in the country, which are, in order of their founding: Pennsylvania Hospital, 1762, 15,007 volumes; College of Physicians, Philadelphia, 1788, 49,747 volumes; New York Hospital, 1796, 22,383 volumes; Library Surgeon-General's Office, 1845, 116,847 volumes; New York Academy of Medicine, 1847, 33,140 volumes; Medical Department Boston Public Library, 1852, 19,609 volumes; Boston Medical Library Association, 1875, 26,082 volumes. He enumerated the following as the principal factors of growth: Money, a suitable library building, the continuous services of a librarian, the energetic cooperation of some one to secure contributions and make complete the files of periodicals, and finally an author, subject and title card catalogue. The address concluded with some words upon pamphlets, classification, use of books, and duplicates. Addresses were also made by Surgeon-General Sternberg and Dr. Robert Fletcher, U. S. A., and Dr. Osler made a few remarks in place of Dr. John S. Billings, who was not present according to expectation. A sumptuous entertainment concluded the evening's programme. Mention must be made of the enthusiasm aroused by Dr. Chadwick's offer to contribute to the Faculty's fund, provided others present did the same, which led to the subscription within a few minutes of about \$3500.

The annual meeting of 1896 was convened at the hall, 847 Hamilton Terrace, on April 28. The presidential address, by Dr. Charles G. Hill, was upon "Some Observations of the Effects of Thyroid Feeding in the Insane." The annual address was by Solomon Solis Cohen, A.M., M.D., of Philadelphia, who chose for his subject "Some Thoughts Concerning Disease and Recovery, in their Relation to Therapeutics."

The President's paper was based upon the observation of forty cases, including a wide range of insanity, but mostly cases of dementia. The results were: Improved, 12; unimproved, 8; greatly improved, 14; cured, 5; died, 1. The effects of thyroid feeding were considered in detail, the most extraordinary being considered those on the mental condition of the insane. "It may be safely concluded that in at least some cases of mental disturbance we may find the cause in a lesion of the thyroid gland."

It is hard to condense Dr. Cohen's philosophic address into a few sentences. It was based upon the Hippocratic text: "The physician must be able to discover the antecedents, know the present and foretell the future; must meditate these things and have two special objects in view with regard to disease, namely, to do good, or to do no harm. The art consists in three things, the disease, the patient, and the physician; the physician is the servant of nature, and the patient must combat the disease along with the physician." We must endeavor, he said, to understand the nature of the life substance and the life force, the modifications which these undergo, under various circumstances, and what are the circumstances that are capable of modifying them. We must recognize the dependence of man on his environment, as well as the power of man to modify the same, which he alone among living creatures possesses. In disease we must recognize the operation of two forces, one tending to destruction, the

1896

other towards restoration to health. It is the function of the physician to endeavor to modify or assist the latter, so as to promote the welfare of the patient. In doing this, whilst he often resorts to drugs, mechanical measures, etc., he learns to place greatest dependence upon air, light, water, heat and cold, food, rest, and exercise of function, physical and mental.

According to the minutes, thirty-four new members were admitted at this meeting, and thirty-three papers were read, not including the two mentioned above.

A communication was received from the Medical Association of the District of Columbia, enclosing a memorial from the Society to the American Medical Association upon the subject of a bill at this time before Congress, the design of which was ostensibly to prevent cruelty to animals, but which, if enacted into a law, would effectually have closed the biological laboratories connected with the Surgeon-General's Department of the United States Army, the Bureau of Animal Industry of the Department of Agriculture, and the Marine Hospital Service, and have prohibited all illustrative experimentation on living animals in the medical colleges of the District. The proposed legislation was being urged with unremitting zeal and persistence by the humane societies, with the usual misrepresentations employed by these people. If adopted, matters would not have been permitted to rest there, but success in this case would have given force and impetus to the crusade against the scientific progress of medicine throughout the country. This was an emergency which had to be met, and met promptly. The memorial was endorsed, and the delegates from the Faculty were instructed to give it their support at the ensuing meeting of the American Medical Association. Dr. William H. Welch, of the Faculty, abandoned his work for some weeks and threw all his energies into the struggle, materially contributing to

the success of the friends of science and humanity (see Preface, vol. vi, "A System of Medicine," by T. Clifford Allbutt).

An interesting event took place on the evening of the third day, which was the presentation of portraits to the Faculty of Drs. George W. Miltenberger and H. P. C. Wilson. Dr. S. C. Chew made the presentation in the former case and Dr. T. A. Ashby in the latter. Dr. Miltenberger was present and made a brief but feeling reply. Busts of Æsculapius and Hippocrates were at the same time presented by Dr. A. Friedenwald. At the conclusion of the ceremonies refreshments were served in the banquet room.

From the reports of officers and committees the following items are taken: The Trustees announced that all the local societies met in the Faculty's hall, so that the medical profession of the town might be said to be gathered under one roof. Also, that owing to the satisfactory condition of the treasury, it had been decided to found a sinking fund to pay off the mortgage of \$7000 on the building when due.

The Treasurer reported receipts for the year \$3511.12, among which were Frick Endowment Fund, \$1000, and pharmaceutical exhibit, \$50. Expenditures, \$3637.23. He had had to borrow \$300 to assist the Library Board to pay for journals.

The most important item in the Executive Committee's report was that relating to the Frick Memorial Library, a branch of the library of the Faculty, instituted by the Messrs. Frick, of Baltimore, in honor of their brother, Prof. Charles Frick, M.D., of the University of Maryland. At the suggestion and through the influence of Dr. William Osler, Messrs. William F. Frick and Frank Frick were induced to contribute \$1000 for the purchase of books relating to the subjects in which the late Prof. C. Frick was especially interested, viz:

1896

diseases of the urinary organs, of the cardio-vascular system and fevers, particularly the malarial fevers, the collection to be known by the above name, and to agree to give \$100 a year during their lifetime for its support. At their request a special room was set aside for this use, in which they have since placed a tablet and a handsome oil portrait of Dr. Frick. The opening of this section took place on the tenth of December of this same year (1896) at the Medical Hall, a memorial address being delivered by Dr. Samuel C. Chew, and other addresses by Prof. J. M. DaCosta, President of the College of Physicians of Philadelphia, and Dr. Jos. D. Bryant, President of the Academy of Medicine of New York. Remarks were also made by Mr. Reverdy Johnson, of the Baltimore Bar, a personal friend of Dr. Frick. A supper followed.

The Library Committee reported that a lady librarian had been employed, and the library was now kept open from 10 a. m. to 8 p. m. The bound volumes numbered 7500, 202 mostly new books, having been added during the year. A Book and Journal Club had been instituted by friends of the library, which had been, and has continued since to be, a most liberal benefactor. One hundred journals were received, about one-third through the club. The total income of the committee (not including the Frick Fund) had been \$736.77, of which the Nurses' Directory had contributed \$78. "The removal of the library to its present location has added much to its usefulness, more than ten members visiting it now where one visited it at the former location."

Through the efforts of the Committee on Milk Laboratory the Walker-Gordon Company, of Philadelphia, was induced to establish a branch in Baltimore, thus securing for this community a pure and reliable infants' food and substitute for mother's milk, which can be ordered by physicians with the

ENNALLS MARTIN

1758-1834.

same assurance of accuracy as they would expect in the compounding of their prescriptions at the drug stores.

1896

The Nurses' Directory was reported to be "getting in good running order," the rules being so changed as to do away with the expense to those procuring nurses.

Allusion should not be omitted (although it is not mentioned in the minutes) to the appointment at this time of a Committee on General Sanitation, because of the important work done by this committee, and the impetus it gave to State and municipal hygiene. The object of the committee, as stated, was to promote the cause of hygiene in Maryland and cooperate with other sanitary and philanthropic agencies in quickening a more enlightened public interest in this department.

The fall meeting was held at Hagerstown, November 10 and 11, seventy-seven physicians being present. Sixteen papers were read by Drs. Birnie, Hemmeter, Preston, Hundley, Merrick, Rohé, J. Whitridge Williams, Osler, Flexner, Canfield, Finney, Humrickhouse, F. Martin, R. Winslow, Gichner and Reik. Patients were exhibited by Drs. Osler, Finney and Bishop. There was a demonstration of the Edison fluoroscope. The meeting was held in the Court House, and a "bountiful entertainment" was provided by the physicians of Washington County. On motion of Dr. Rohé, a committee of one from each senatorial district, with the President as chairman, was appointed to act in conjunction with the committee of the Baltimore Neurological Society in suggesting amendments to the laws governing commitments of the insane and the relations of the State to this class.

1897. The ninety-ninth annual session began at the hall, 847 North Eutaw Street, on April 27, and the President, Dr. William Osler, read his address on "The Functions of the

1897

MEDICAL AND CHIRURGICAL FACULTY

1897

State Faculty." After referring to the unusual name, Dr. Osler spoke of the dual function contemplated by the charter, part of which, the licensing power, had been transferred to a separate and independent board. The Faculty had been the only enduring protest against individualism in the State. The suggestion was made whether it would not be wise, and lead to a great increase in the usefulness of the Faculty, if the various local societies were united with it as sections. The Faculty knits together the discordant elements of the profession, as well as the generations of physicians who have passed away. Reference was made to the men who founded the Faculty, and the sentiment uttered "that it is the sign of a dry age when the great men of the past are held in light esteem." Portraits, not only of these men, but of the others who have made strong impress in their day, should adorn our walls. The library received due consideration, for by it is the intelligence of the profession to be judged. The methods of providing the means for carrying on the library, and for meeting the various needs and growth of the Faculty, were considered, and a Committee on Finance was recommended. The advisability of a revision of the Constitution and By-Laws was also pointed out.

In accordance with the President's recommendations, committees were appointed on these duties, and also a Centennial Committee.

Three subjects for discussion were taken up at this meeting, viz: peritonitis, rabies and the care of the dependent insane in the State, four stated papers or addresses being delivered on the first and third, and three on the second. Each was also discussed at length by the members. A large number of papers was also presented by other members, among the more striking titles of which were: "Fracture and Dislocation of the Vertebral Column, with Other Severe Injuries—Recovery, with

Exhibition of Patient;” “Two Cases of Gastrotomy and One of Gastro-enterostomy, with Exhibition of Patient;” “Rupture of the Aorta;” “A Case of Complete Hysterectomy for Rupture of the Uterus and Vagina During Confinement;” “The Early History of Ophthalmology and Otology in Baltimore.” Models of the original Chamberlen midwifery forceps were exhibited.

Sixty-six new active members were added to the Society, and Drs. James R. Chadwick, S. Solis Cohen and David W. Cheever were elected to honorary membership.

The Committee on Legislation was instructed “to secure such legislation as will exclude from the examinations of the Licensing Board any one graduating in or after 1899, who has not taken a course of four years’ instruction in some reputable medical college,” and also “to take early steps to secure some legislation regulating the practice of midwifery in Maryland.”

Under reports of committees, etc., it was noted that the hall had been the meeting place not only of local but also of general societies, and the expenses had been materially diminished by the rent paid by the same, the amount received being \$631.25.

The Treasurer reported the receipts for the year \$3390, and the disbursements \$3499. The liabilities, including the deficit, were \$434.28. Among the items under receipts were initiation fees and dues, \$2075, legacy from the estate of Dr. Frank Donaldson, \$137.53; Wm. F. Frick, Esq., additional subscription to the Frick Library, \$500; Mr. Reverdy Johnson, same, \$100. The Treasurer, Dr. W. F. A. Kemp, after alluding to his long incumbency of fifteen years in the office, asked to be excused from further service. His request was granted and Dr. Thomas A. Ashby was elected his successor.

The Library Committee’s report was of interest. The number of bound volumes, by actual count, was 7701. There were

MEDICAL AND CHIRURGICAL FACULTY

1897

received regularly 118 journals, 49 being through the Book and Journal Club and 27 through exchange. Through the Frick Fund and the Club, 332 new books and 209 bound journals, a complete set of "Virchow's Archives" being included in the latter, were added, being the largest number of new books ever received in one year. The great interest evinced in the library was shown by the number of books taken out during the year, 612, and by the increasing number of readers consulting the collection, more than 900 in number, since January 1. A card catalogue outfit had been purchased for \$130, and the work of cataloguing had been entered upon, an assistant to the librarian being secured for this purpose through the generous liberality of a member of the Library Committee. The committee announced that it had adopted the very commendable rule of meeting weekly.

The Committee on General Sanitation, appointed at the previous annual meeting, reported that it had secured the establishment of a city bacteriological laboratory, and at the request of Mayor Hooper had named an incumbent for the position, who had been duly elected. Such a department had long been needed for the supervision of the city water supply, the detection of infectious diseases, the analysis of suspected foods, etc. A pure milk conference had been held under the auspices of the committee, at which plans for a purer milk supply had been discussed by a representative gathering of physicians, veterinarians, dairymen, farmers, chemists and others. A manifest improvement in dairy products had resulted from this conference. During the previous February, with the coöperation of the State Board of Health, the committee had held a sanitary conference, to which some eighty or more persons from all parts of the State, chiefly health officers, came. So encouraging was the attendance that at the close of the meeting the Mary-

land Public Health Association was organized. The counties had shown a willingness to coöperate in sanitary reform, and everything gave promise that the State would soon assume a leading position in this field. Among the general aims of this Association were: "The registration by the State of correct and full returns of births and infectious diseases; strict supervision and control of food and drink supplies; the maintenance of hospitals for infectious diseases; enforced isolation and disinfection at public cost; the regulation of funerals and transportation of the dead; conformity to hygienic principles in the construction of dwellings for man and beast; systematic inspection by experts of all schools, tenements, factories, jails, hospitals, almshouses and other public buildings, and steamboats and railway carriages; the restraint and regulation of offensive trades (slaughter houses, etc.)." In all their meetings and deliberations the committee had had the active interest and coöperation of the President of the Faculty. The entire expenses of the committee for the year had been only \$2.45.

A very important report was presented on the Nurses' Directory, now in its fifteenth year. At first this institution had been a convenience to the profession, and almost a necessity for the nurses. The same could not be said any longer, it being easier now to obtain a nurse directly from one of the training schools or homes. From the point of revenue it had never been a success, the number of nurses now registered being sixty-nine, and the net profit for the last year having been \$76.79; this notwithstanding vigorous efforts to push it, including the sending of 1000 notices to physicians throughout the State. In view of these facts, and the rapid growth of the library and the demands made upon the librarian's time, it was recommended that the Directory should be discontinued, and this recommendation was adopted and carried out in the following October.

MEDICAL AND CHIRURGICAL FACULTY

1897 The Committee on Preventable Blindness reported that there had been two convictions of midwives for violation of the law, that the law was now very generally obeyed, and that many cases of blindness had, in consequence, been prevented.

A report was made upon State care of the insane, and the Committee on Legislation was directed to bring the matter before the Legislature and use all means to have it provided for by law, and also to have the Lunacy Act so amended as to require for commitment the certificates of two physicians, under oath, stating the nature of the mental trouble, and the grounds of commitment. An amendment to the Medical Practice Act was recommended, making the necessary time of study four instead of three years.

Mention has already been made of the work of the Book and Journal Club, organized early in 1896, for the purpose of assisting the growth and development of the library. The report made at this meeting showed that the membership was now 106, and that in the short time of its existence—a little over a year—this useful organization had expended \$1005.29 on the library, adding books to the value of \$541.96 and journals to the value of \$463.33.

Finally, we have the annual address of Prof. David W. Cheever, M.D., on the subject, "Does Medicine Advance?"

After considering what is meant by the art of medicine, and enumerating the objects of medical practice, viz: prolonging life, relieving suffering, preventing and curing disease, the speaker briefly reviewed medical history, particularly the changes of the previous sixty years. He named the eras of medicine as: 1. Observation—Hippocrates. 2. Polypharmacy—Galen. 3. Experiment—Bacon and Hunter. 4. Reliance on Nature—Sydenham. 5. School of Precision—Louis. 6. Prevention—Jenner. 7. Aggressive Therapeutics—Modern Scien-

tists. The many changes and improvements that have been made in modern times, and especially during recent years, were then cited. But whilst many diseases have yielded to modern research, many remain still obdurate. "That we have accomplished so much is surely cause for congratulation. Medicine, as an art, really advances. Meanwhile, the horizon of knowledge is ever receding, and the field of new discovery and exploration is inexhaustible." He advocated "aggressive therapeutics" rather than "expectancy."

The semi-annual meeting was held at Ocean City on September 15 and 16, about 80 members attending. Papers were read by Drs. Julius Friedenwald, Ashby, Cullen, Harlan, Stokes and Messick, Bevan, Purnell, Osler, Browne, Gardner, Dirickson, Fulton, W. Lee, C. G. Hill, Woods, Young, Hemmeter, Brush, Kemp and Cooke, Jr. On the evening of the first day the Faculty partook of a collation at the Atlantic Hotel as the guests of the citizens of Ocean City.

While but brief space is given in the Transactions to a special meeting held December 15, the occasion deserves more than a mere mention. The object of the meeting was the consideration of certain proposed amendments to the Medical Practice Act. This Act (Chap. 296, 1892,) secured through the intervention of leading members of this Faculty, restored to the latter, at least so far as the regular profession was concerned, the control of medical practice in the State, which it had lost by the Act relating to Thomsonians in 1839. Amended in 1894, and again in 1896, so as to make obligatory the registration of all physicians in the county courts, and provide for the prosecution and punishment of all violators of the law, it had been accepted by the profession of the State as a great boon, and no opposition had been manifested to it, until the results of the examinations of May, 1897, were announced. In these examinations the Board found

1897

evidence in the papers of a number of the candidates that the pledge of honor with reference to giving and receiving assistance, required of and signed by all, had been broken by several. The Board promptly cancelled the papers of all that showed evidence of this violation of faith. Of the 97 who presented themselves, 13 had their papers so cancelled, while 37 failed to receive the requisite average. When this result was made known there were, as had been anticipated by the Board, "emphatic denials, demands for return of papers, denunciations and threats of legal processes." Feeling that they were in the right, the Board declined to accede to these demands and threats, and invited those disaffected to test the matter in the courts, but in no instance was this done. Unfortunately, some of the medical colleges of Baltimore took the part of their rejected alumni, and wrote quite a peremptory letter to the Board, asking to be furnished with the evidence upon which the rejections were based. This the Board declined to do, "failing to perceive wherein the gentlemen of the committee possessed a superior judgment or where they acquired a right to review our [their] work."

The colleges, therefore, called for the above special meeting, and were present by their representatives, for the purpose of securing the influence of the Faculty in favor of their proposed amendments. It was soon apparent that the sentiment of the profession at large, as represented at the meeting, was strongly against the action of the colleges, and that there must be no interference with the independence of the Examining Board, so that upon presentation of the first amendment, it was defeated and a motion to adjourn was then carried. Now that the feeling occasioned by these events has passed away, all the members of the Faculty doubtless feel proud of the admirable manner in which the Board has executed its difficult trust, and at the high standard which it has

maintained. There can be no doubt, that the reputation and morale of the profession of the State have been greatly enhanced by their steadfastness of purpose and intelligent discharge of duty.

1897

It is of interest to learn, that it is the conviction of the Board, "that the efforts of this Faculty in securing legislation, to guard the entrance to the profession, have been in the line of its advancement and elevation, and in full accord with the earnest efforts of the truly professional men in a large majority of the States of the Union, and, indeed, throughout the world."

1898. The one hundredth annual meeting was convened at the hall on North Eutaw Street on April 26, 1898. Seventy-eight members were added to the roll and twenty-six papers were read. Dr. Osler announced, that, in response to the circular issued the previous spring, \$4300 had been promised towards the payment of the debt upon the building, amounting to \$7000. He made a ringing appeal for immediate subscriptions, to make up the remaining sum, in order that the Faculty might be free of debt in its centennial year. "Our present home," said he, "is an advance on our old quarters, but it does not represent suitable quarters for the profession of a city of 500,000 inhabitants. We need a new building, and an endowment fund for the library; and what we need, Mr. President, we can get with the concerted action on the part of the profession and our friends." He declared that it was his intention to ask the citizens of Baltimore to aid in putting the Faculty on a satisfactory basis, as the citizens of the other large cities had done.

1898

The annual reports may next be reviewed.

MEDICAL AND CHIRURGICAL FACULTY

1898 The Treasurer reported total receipts \$3177.22; total expenses, \$2832.91, leaving a balance in the treasury of \$344.31. Among the former, were dues and fees, \$1893; from the Messrs. Frick, \$700; from the pharmaceutical exhibit, \$90. The Library Board had received \$1481.40, including the Frick Fund. For the building fund, the cash receipts had been \$1974.48. The membership embraced 473.

The Executive Committee announced that steps had been taken for the preparation of a centennial volume, to be called "The Medical Annals of Maryland." The committee had succeeded in having secured to members of the Faculty, the privilege formerly allowed them, of procuring books from the Surgeon-General's Library, at Washington.

The Library Committee's report was indicative of rapid and great growth: 3257 persons had made use of the books and journals, and 741 volumes had been taken out; 127 journals were regularly received, 55 of which came from the Book and Journal Club. The total number of volumes added during the year was 1478, of which 872 were by donation; 342 volumes came through the Frick Fund; 652 reprints had been received. The work of cataloguing had been continued and was being most thoroughly carried on. Miss Eloise Baker, of Baltimore, had beautifully fitted up the librarian's room, in honor of her father, Prof. Samuel Baker, the founder of the library, and had also presented an oil portrait of him. A number of portraits had been added to our collection.

The Committee on General Sanitation had continued its good work. A special meeting had been arranged in the previous November, during the semi-annual meeting of the Maryland Public Health Association, for the discussion of the sewerage problem in Baltimore. The proceedings of this meeting were published in the report of the State Board of Health,

and in several journals. Sweat-shops had been discussed at meetings of the committee, and with vaccination and public baths, would again be more thoroughly discussed at the approaching May meeting of the Maryland Public Health Association. The committee had endorsed the Vital Statistics Act and the Infectious Disease Act, both of which had passed the Legislature.

The Committee on Preventable Blindness reported that the law relating to midwives and ophthalmia neonatorum, appeared to be well observed.

The Committee on Legislation reported that the amendments to the Lunacy Law, approved at the last annual meeting of the Faculty, had been opposed by some members of the Faculty, which occasioned such delay that, while they passed the House, they failed to pass the Senate.

The President's address (Dr. Charles M. Ellis) was upon "The Country Doctor," and was an endeavor to point out in what respects many of the country doctor's surroundings differ from those of the "town doctor;" what are the most pronounced of his needs, and the difficulties that stand in the way of his overcoming them, together with some suggestions of means that seem best suited to help him. The advantages possessed by the city physician exclusively, were stated to be: hospital wards and dispensaries; teaching bodies; daily intercourse of men similarly occupied; medical societies; medical libraries. Some substitutes for these can be provided, among which are the cottage hospital and dispensary, post-graduate courses, the cultivation of cordial and fraternal relations with neighbors and frequent consultations, county medical societies and book clubs. Although the first cottage hospital was founded at Cramleigh, in 1853, and there are four hundred of these institutions in the British Islands, there is not one

1898

as yet in Maryland, nor does there appear to be one in any of the Southern States. This is strange, when their usefulness is considered. It was pointed out how they may become medical centres of a neighborhood, centres of experience and study, and means of training nurses for the rural poor. Every young physician locating in the country should take a post-graduate course at the end of his fifth year and again in his tenth year. "I have no present knowledge of any country physician who keeps a case book, and those who habitually and systematically use instrumental aids to diagnosis are extremely few."

The annual address was by Prof. William T. Councilman, of Harvard University, and was upon "Epidemic Cerebro-Spinal Meningitis." The following personal allusion occurs at the beginning of the address: "I have always thought of the Medical and Chirurgical Faculty of Maryland with pride and gratitude; with pride because it has borne such honorable part in the history of my native State and in the history of medical associations; with gratitude, because I feel that I derived my first inspirations in the path in medicine, which I have followed, from two addresses I heard given before your body."

There is little doubt, he said, that all cases of meningitis affect the meninges of both cord and brain, but the involvement of the cord is greatest in the form under consideration. There are different types of meningitis, and each has its own cause. Only within recent years have we been able to distinguish, in epidemic cerebro-spinal meningitis, a definite aetiological factor—an organism found only in the inflammatory exudation, and which may be grown in various culture media, and whose pure cultures inoculated into the meninges of susceptible animals will produce an acute menin-

gitis. This organism, the "diplococcus intra-cellularis," was first described by Weichselbaum in 1887. It is about the same size as the ordinary pathogenic micrococci, and stains with any of the ordinary stains for bacteria, and is decolorized by the Gram method. The blood-serum mixture of Löffler is best adapted for its growth. The first recognition of the disease was by Vieusseaux, of Geneva, in 1805. Its first appearance in this country was at Medfield, in Massachusetts, in 1806. Dr. Councilman's paper was based upon the study of an epidemic which occurred in Boston in 1896, '97 and '98, and embraced the clinical and pathological records of the three leading hospitals there. The greatest number of cases occurred in April, and the greatest mortality was in May. Of 146 cases, 129 occurred before 35, and there was but one under one year. There was no history of previous attacks in any of the cases. In diagnosis, "neither the clinical history, nor the autopsy without cultures, is absolutely conclusive." Lumbar puncture was performed in 66 cases, in 46 of which diplococci were found in the fluid, either in microscopic examination or in cultures. Towards the last of the epidemic, there were no negative results when puncture was early, and the tubes were inoculated with a large amount of material. In most early punctures, the fluid was turbid. No ill effects were seen from the punctures. Too much cannot be said of the importance of the procedure in making the diagnosis. The post-mortem examinations of forty-three cases were minutely detailed. In nine pneumonia, due to diplococcus intra-cellularis, was found. The cases were divided into three classes: 1. Acute, including fulminant (fatal within 48 hours), and those lasting not more than fifteen days; 2, chronic, where symptoms were not so active and exhibited remissions and exacerbations; 3, intermittent, where there were complete

1898

intermissions of temperature. Vomiting was present in 70 of 111 cases, delirium in 60 of 111; pain was a nearly constant symptom. In 83 of 111 cases, neck symptoms were present, pain or contraction. Herpes was present in 35 of 111 cases; petechiæ or larger hemorrhagic skin foci in 11 of 111. The meningitis, accompanying some cases of acute lobar pneumonia and certain other infectious inflammations, is a metastatic form, and entirely distinct from this disease. Eye affections were common, and there were sixteen cases with pathological conditions relating to the ears. Acute inflammation of the joints was found in six cases. Blood-counts were made in thirty-three cases. There was invariably leucocytosis, the white corpuscles varying from 9350 to 31,000. The pulse and temperature were not characteristic. The influence of the disease in producing permanent mental impairment has not received due attention. Four of the cases showed this on discharge, two having marked impairment, one being irrational and childish and one stupid, not recognizing relatives. None of these cases could be followed up to see whether the mental disturbance was permanent. "The surest method of diagnosis in meningitis, and one which should always be carried out when possible, is by lumbar puncture. The method is easy, and experience has shown it to be devoid of danger. If properly carried out in the early stages of the disease, which is the time when there is most difficulty in diagnosis, it is almost conclusive. It certainly deserves to be ranked as a method of diagnosis with the examination of the sputum" (*i. e.*, in pulmonary tuberculosis).

A special meeting was held on November 9, when the revised Constitution was adopted. As this instrument was published in the Transactions of the Centennial Year, it does not require detailed notice here. It provides for the follow-

ing officers: a President, two Vice-Presidents, a Secretary, a Treasurer, an Executive Committee of five, a Board of Examiners of twelve, and ten Trustees, all to be elected annually except the Trustees, only one of whom is so elected. The President, Vice-Presidents and outgoing Trustee are not eligible to reëlection until after the lapse of one year from the expiration of their term of service. The Secretary becomes a salaried officer, and instead of electing the other usual secretaries, he is empowered to appoint three or more members to discharge the duties of Assistant, Corresponding and Reporting Secretary. The management and disposal of the property of the Faculty is vested in the Trustees, who have authority to fill vacancies in their Board when due to death or resignation. No one is eligible to membership unless he has passed the examination of the State Board. There are standing committees (the old sections were abolished in 1893) on Library, Publication, Memoirs, Ethics, Legislation and Programme. The dues of the city members are \$6 per annum and of county members \$2. The delegates from the local medical societies have all the privileges of the Faculty, upon the payment of \$2 for the year of their appointment. An entrance fee of \$5 is required from all new members without distinction, but there is no further charge for membership during the first year. These are the chief points and may, with interest, be compared with those of the Constitution of 1799.

The semi-annual meeting was held at Frederick City, November 16 and 17. There were thirty-six physicians present. Papers were read by Drs. Hemmeter, Browne, Neale, Paton, Jamar, Osler, Simmons, Gilchrist, Ashby, Reik, Medders, Harman, Fleming, Martin, Young and Winslow.

MEDICAL AND CHIRURGICAL FACULTY

1899. *Centennial Anniversary*.—Extensive preparations had been made for this great event, that it might be celebrated in a manner worthy of the occasion. For months the Centennial Committee had been at work. Circulars were sent out to all the physicians in the State. New societies were organized in many counties, and the old ones were stimulated to greater enthusiasm. Special meetings were appointed, at which prominent members from the city made historical and other addresses. A large number of sub-centennial committees was appointed to look after details, such as music, badges, transportation, entertainment, invitation, ways and means, pharmaceutical exhibits, etc. A special fund of \$1200 was raised to help defray the expenses. The whole of the first floor and part of the basement of McCoy Hall, at Johns Hopkins University, were secured for the meetings and other uses of the Faculty. An elaborate programme was drawn up for four days, from Tuesday, April 25, to Friday, April 28, inclusive. The first day included the formal opening, with the President's address and the general reception, both in McCoy Hall. On the morning of the second day, there were demonstrations and clinics at the Johns Hopkins Hospital, the College of Physicians and Surgeons and the Baltimore University; at 1.30 p. m. there was luncheon at the Faculty's hall; at 3 p. m. began the scientific meetings, with papers by Drs. Herman Knapp, of New York; George Ben Johnston, of Richmond; W. W. Johnston, of Washington, and an address by our own Dr. Welch; at 8 p. m. the Annual Oration was delivered by Dr. W. W. Keen, of Philadelphia, and this was followed by receptions by members and by a smoker at the hall. The forenoon of the third day was given up to clinics and demonstrations at the University of Maryland, the Baltimore Medical College and the Maryland

MEDICAL AND CHIRURGICAL FACULTY

1899

Medical College; at 1.30 p. m. there was a lunch at the hall, and at 3 p. m. the scientific meeting was resumed, with papers by Drs. E. H. Bradford, of Boston; Abraham Jacobi, of New York; Horatio C. Wood, of Philadelphia, and Roswell Park, of Buffalo; at 7 p. m. the annual dinner of the Faculty took place at the Hotel Rennert. The morning and afternoon of the fourth day were given up to receptions at the Sheppard and Enoch Pratt Hospital, Towson, and the second Hospital for the Insane, Sykesville, and to a demonstration of cases at the Hospital for Crippled and Deformed Children, and at 8 p. m. the meeting closed with a business session. The proceedings will now be considered in detail.

The formal opening took place at 8 p. m. on Tuesday, the great McCoy Hall being crowded to its utmost capacity with the leading citizens of Baltimore of both sexes. At the appointed hour, the procession entered the hall, led by President Daniel C. Gilman, His Excellency Lloyd Lowndes, the Governor of the State, His Eminence the Cardinal Archbishop of Baltimore, the President of the Faculty, Dr. Samuel C. Chew, and others. A stringed orchestra played musical selections between the addresses, and later during the reception. An invocation was pronounced by Cardinal Gibbons, and this was followed by an address by the Governor, who spoke of the important rôle which the Faculty had filled in the State, and of the distinguished names that had adorned the Maryland profession in the past.

The presidential address, upon "Medicine in the Nineteenth Century," was, as the title implies, a review of the great discoveries of the century, with which "no period can be compared as to the number and importance of its achievements." In succession were considered vaccination, auscultation, the researches of Bright, anæsthesia, bacteriology, antiseptis, the

MEDICAL AND CHIRURGICAL FACULTY

1899

use of various drugs, the hypodermic needle and the diphtheria antitoxine, and these were declared to be "some of the gifts which the medical and surgical science of the nineteenth century lays down as its tribute at the feet of humanity," and, unlike many of the advances in other sciences, they were pronounced to be "wholly good, and good alike to all." All mankind are partakers of their bounty, and from none is their hand withheld.

At the close of the President's address, the large assemblage repaired to the corridors and to Donovan Room, to partake of the handsome collation provided for it, and to examine the various objects of interest there collected. Others went to the basement to see the exhibit of the manufacturing chemists and publishing firms, whilst many of the younger set indulged in dancing, the seats in the hall being removed for that purpose.

On Wednesday morning, at 10 o'clock, the members and visitors repaired in large numbers to the eastern half of the city for clinic and laboratory demonstrations. Among the things of special interest were Dr. Keirle's demonstration of the methods employed in the Pasteur Institute of the College of Physicians and Surgeons in the diagnosis and treatment of rabies, the exhibition of a large number of cases operated on successfully by Dr. Halsted for cancer of the breast and hernia, and the exhibition of the new methods of illuminating and examining the bladder and catheterizing the ureter in the female, by Dr. Kelly. Dr. Thayer spoke of the "new researches on malaria" (in connection with certain varieties of the mosquito), and the new laboratories of anatomy, physiology and pharmacology at the Johns Hopkins Medical School were inspected.

At 1.30 p. m. luncheon was served at the Faculty's hall.

At 3 p. m. began the reading of papers. The design was that this part of the programme should be (with the exception of the presidential address) strictly relegated to those not connected with the Faculty, and with this object in view, a number of distinguished gentlemen from the large cities of neighboring States had been invited to participate.

The first paper on the programme was that of Dr. E. G. Janeway, of New York, on "Clinical Observations on Some Forms of Heart Disease." This had to be omitted owing to the illness and consequent absence of Dr. Janeway. The same was the case with another paper which was scheduled for this session, viz: "The Management of Vesical Calculus in Prostatics," by Dr. Samuel Alexander, also of New York. The place of these gentlemen was taken by Professor William H. Welch, whose address will be noticed later.

The first paper of the session was read by Dr. Herman Knapp, of New York, on "Landmarks in the History of Ophthalmology in the Nineteenth Century." The first landmark, he said, was the discovery, in the first year of the century, by Thomas Young, of the cause of the power of accommodation; this was confirmed fifty years later by M. Langenbeck, Cramer and Helmholtz, the last-named devising for this purpose the ophthalmometer. In succession were noted the remarkable improvement of vision in astigmatic eyes by cylindrical glasses, the invention of the ophthalmoscope (by Helmholtz), the stimulation of the whole physiology of the visual organ, especially by the publication of the "Physiological Optics," of the same scientist, the cultivation of the functional examination of the eye by Snellen's test-types, and the examination of the field of vision by the perimeter of Foerster, and similar instruments which have brought to light toxic amblyopia, homonomous hemiopia, etc. The limita-

1899

tions of the field of vision and the studies in the pupil reflexes, especially reflex irritability in locomotor ataxia (Argyll-Robertson pupil, 1871,) are valuable symptoms in general diagnosis. Of immense importance are the exact theoretical and practical studies of the refractive condition of the eye, which led to "The Anomalies of Accommodation and Refraction," by Donders. Every educated person sooner or later requires optical aid. The boon mankind has received by the discovery and correction of astigmatism alone is incalculable. The successful treatment of anomalies of motility, the introduction of iridectomy in glaucoma and extraction of cataract (both by Von Gräfe), the more general tendency to operate for secondary cataract, the introduction of local anæsthesia by cocaine and holocaine, the application of the magnet for removal of iron foreign bodies from the interior of the eye, the introduction of bacteriology, and, lastly, the affiliation of ophthalmology with general medicine and surgery, were all alluded to. Of operations for cataract he said: "The restoration of sight, with a round and perfectly clear pupil, is the highest accomplishment of the eye-surgeon—a truly ideal result, and obtainable in more than fifty per cent of the cases." The progress of ophthalmology was most marked in the third quarter of the century, and it was due in largest measure to the great Helmholtz, the immortal discoverer of the ophthalmoscope, who was in himself a landmark in the history of science, not only of the nineteenth century, but of all times, a spirit, as Tyndall said, "akin to Newton." Dr. Knapp concluded with some remarks upon the relation of the eye-specialist to general medicine. "Division of labor leads to proficiency; centralization and organization of labor is, as I understand it, distribution of labor among the fittest for each kind of work. The greatest credit for the organization of

medical labor is due to general societies, such as the one whose glorious centennial anniversary we have come from far and near to celebrate to-day."

The second paper was by Dr. George Ben Johnston, and was entitled "The Limitations of Conservative Surgery of the Female Generative Organs." The following is the conclusion of this paper: "While conservatism, properly applied, is both wise and humane, to be tolerated it must accomplish what it seeks to do. In its application, the soundest judgment, the ripest experience and consummate skill, must be present. The difficulties which encompass it are great.

"1. It often entails prolonged effort, thus increasing the liability to shock. 2. Extensive manipulations, which denude the peritoneum, thereby increasing the risk of infection and setting up post-operative adhesions, and maybe intestinal obstruction. By dealing with open pus cavities, grave danger of infection occurs. It often requires many wounds, which mean much hemorrhage, numerous cavities to be repaired, foreign suture material left behind to accomplish these repairs, the possible formation of blood clots, which furnish food for infection, a likelihood of secondary hemorrhage, perhaps painful scars, and almost certainly, when many points have been subjected to operation, post-operative adhesions. 3. The bruising of tissues incident to harsh methods of controlling hemorrhage, thereby impairing the recuperative powers and thus endangering the success of the undertaking. 4. Finally, the ever-present prospect of a second operation."

The third paper was by Dr. W. W. Johnston, of Washington, D. C., on "J. Hughes Bennett: His Services to Medicine." "On an occasion such as this," he said, "the anniversary of an ancient and honorable medical society, nothing seems more ap-

1899

propriate than to review the memories of men who were recognized leaders in their time, and whose lives marked epochs in medical science." The chief features of Dr. Bennett's useful and arduous life were summed up as follows: "1. He was the first to begin systematic instruction in microscopic technology and histology in an English-speaking university. 2. He insisted upon the great value of the microscope in the detection of diseased processes, at a time when but little attention was paid to this mode of study. In this direction much of his best work was in connection with diseases of the nervous system. His publication, entitled 'Pathological and Histological Researches on Inflammation of the Nervous Centres,' is said to be 'the first positive addition to our knowledge of nervous diseases by means of the microscope.' 3. He was one of the first to use the microscope for clinical diagnosis, and was a pioneer in recognition of disease by blood examinations, the first recorded case of leukemia being described by him. 4. He revolutionized the treatment of pneumonia. 5. He was an iconoclast, destroying idols and warring with persistent delusions and useless dogmas. Much of his life was a battle, in which blows were given and taken, but the influence of Bennett's teaching, and the example of his accurate clinical methods, have had a far-reaching and prolonged influence in England, and above all, in this country."

Our own Dr. Welch, who at the request of the President had consented to take the place of the absent speakers, next occupied the attention of the assembled physicians and others with a description of the exhibit in the Donovan Room, illustrating the history of medicine. Dr. Welch's remarks were most interesting and were highly appreciated by all who heard them; they really constituted a comprehensive, although necessarily brief, review of the history of medicine. "Our exhibit of works and

portraits to illustrate epochs in the history of medicine is not so conspicuous an object as the pictorial display, and may not attract the attention of all present, so I am glad, therefore, of an opportunity to say a few words on this subject. It seemed appropriate to the committee arranging the programme to have an exhibit of this kind. I am not aware that any similar attempt has been made heretofore, at least not upon this scale. Very considerable embarrassment was encountered in making the selections, not so much in regard to the main landmarks as of the authors who should be selected for the purpose of the exhibition. No book or picture has been placed in the exhibit simply on the ground of its being artistic, or to the bibliophile interesting, nor has any book been placed there simply because it was old. The exhibit will be found in the room opposite to the entrance to this hall, not in the corridors; is arranged in glass cases, and unless one studies it systematically he will not get the proper relations of events. One should begin in the case at the reading desk, at the end of the room, and then follow them down in their order. This key to the exhibit [pointing to a chart], which usually hangs in that room, has been brought in here for the purpose of my remarks." Three divisions of the subject were made: 1. Ancient medicine, extending to the time of Galen. 2. Mediæval medicine, extending from Galen to A. D. 1400, and embracing Arabian and scholastic medicine. 3. Modern medicine from 1400 to the present. The first period includes (*a*) Egyptian medicine, starting with the famous Ebers papyrus, 1500 B. C.; in this, among seven hundred remedies named, are found opium, castor oil and others now well known; (*b*) Assyro-Babylonian medicine, contained in the cuneiform tablets, some of which have been deciphered by our Dr. Christopher Johnston; (*c*) Hebrew medicine, as found in the Book of Leviticus; (*d*) a work of

1899

uncertain date, according to Max Müller antedating the Egyptian work; (e) Greek medicine, Hippocrates and Aristotle; (f) school of Alexandria, in the time of the Ptolemys; (g) Roman medicine—Asclepiades 100 B.C., who introduced Greek medicine into Rome; Celsus, 50 A.D., the great encyclopædist, who clearly recognized diphtheria; Paul of Ephesus, whose work on diseases of women and children is the only one of the sort preserved to us from ancient time; Galen, second century, A. D., who summed up all the wisdom of antiquity, and whose system held undisputed sway for over one thousand years, the first to make physiological experiments.

2. Mediæval Medicine: Oribasius, fourth century; Paul of Ægina, a surgeon of experience; the Arabian school, of which Razes gave the first and a good description of smallpox, and Avicenna wrote "The Canon of Medicine," a complete system modeled after Galen, and the text-book of medicine for centuries. With the tenth and eleventh centuries began universities, the first, Salerno beginning with a medical school, with which were connected Constantine of Africa, who translated Avicenna and Galen from the Arabic, and that famous poem on health, "Regimen Salernitatis," rhyming in Latin and translated into all languages. In the twelfth and thirteenth centuries we have Bernard Gordon and Gilbert, the first English writers, and typical examples of scholastic medicine. In the fourteenth century, the dawn of freedom, the philosophical works of Arnold of Villa Nova, were burned by the Inquisition; Mondini was the first, from the time of Alexandria, to dissect the human body, and Guy de Chauliac wrote on surgery.

3. Modern medicine, ushered in by classical scholarship, return to observation and revolt against dogmatic authority. To illustrate the first, Linacre, the Oxford professor, and Kaye were selected. Vesalius reconstructed anatomy, basing it upon

GEORGE BUCHANAN

1763-1808.

human dissection, whereas Galen's anatomy was based on animal dissection. That strange man, Paracelsus, who began by burning the works of Galen and Avicenna; he introduced antimony. Benivieni, a practical physician. Harvey, the discoverer of the circulation of the blood, announced, 1616, the greatest discovery in physiology, and which overthrew Galenism. Sanctorius, the first to use instruments of precision, the first to count the pulse and to use the thermometer. Borelli, the first to try to explain the phenomena of life on chemical principles. Van Helmont, who gave us the modern conception of gas, and discovered carbonic acid. The School of Leyden began its famous career under Sylvius. Glisson was celebrated for his work on the anatomy of the liver, and was the first to conceive the doctrine of irritability, the fundamental property of living things; he wrote a celebrated monograph on rickets. Willis, famous in the anatomy of the brain. Sydenham, one of the greatest physicians of all times, whose graphic description of the gout, whose writings on hysteria, use of bark in malaria and cooling treatment of fevers, deserve particular mention. Microscopic anatomy began with Malpighi and Van Loewenhoek. The first was the first person to see the red blood corpuscles and to study the structure of the lungs, kidneys and glands; the second, a self-taught microscopist, discovered bacteria. These two accomplished all that was possible with simple lenses, and nothing more was done in this line until more perfect lenses were devised in the early part of the nineteenth century.

The eighteenth century was called the philosophic century. Boerhaave, Hoffman, Stahl, Haller, Wolff and Morgagni may be mentioned. The last was the first to make post-mortem examinations, and he introduced "anatomical thinking." Auenbrugger, who introduced percussion; Hunter, possibly the

1899

greatest name in scientific surgery; Jenner, the discoverer of vaccination; Spallanzani, the first to study artificial digestion in tubes outside the body, and Galvani, connected with the subject of electricity.

For the nineteenth century, Bichat heads the list, followed by Laennec, the discoverer of auscultation; Louis, celebrated for his studies in typhoid fever; Von Baer; Charles Bell, the discoverer of the roots of sensory nerves; Marshall Hall, who discovered reflex nerve action; Liebig, who started the work in physiological chemistry; Johann Müller, the founder of the modern German school of physiology; Magendie; Morton, the discoverer of anæsthesia; Rokitansky; Wunderlich, whose work has made general the use of the clinical thermometer; Helmholtz, the discoverer of the ophthalmoscope; Virchow, the great pathologist; Lister, the first to formulate and apply the principles of antiseptic surgery; Pasteur and Koch.

The annual oration was delivered in the evening by Dr. W. W. Keen, of Philadelphia, who gave a masterly address on "The Debt of the Public to the Medical Profession." In one respect, he said, the medical profession differs from all others, and that is in being self-destructive. While we live by ministering to the wants of others suffering from accident and disease, our profession is foremost in the endeavor to abate disease and prevent accident. In its efforts it has been aided very greatly by the coöperation of the public, of sanitary engineers and of legislators. Among the foremost sanitarians in every community are the doctors. Diseases that once assumed the form of veritable pestilences are now almost unheard of among us, and others have had their fangs drawn. If the voice of the profession were heeded, the latter would almost, if not entirely, disappear.

In succession, Dr. Keen then took up the plague, cholera, yellow fever, scurvy, typhus fever, typhoid fever, smallpox, tuberculosis, diphtheria, hydrophobia, trichinosis and animal diseases, and pointed out what had been done in each case in the way of stamping out and preventing these various pests. He next considered the two surgical achievements, the introduction of anæsthesia and antisepsis, which have utterly revolutionized modern surgery, and concluded with some eloquent remarks upon the bravery and generosity of the profession.

The oration was followed by private receptions, of which the most notable were those at the residences of Drs. Osler and Kelly, who kept open house during the evening. A "smoker" was also held at the hall of the Faculty, which was largely attended.

Nearly all the hospitals and laboratories of the city were open for inspection, and were visited by many of the members and visitors both upon this and the following day.

The third day of the celebration began with demonstrations and clinics at the University of Maryland, the Baltimore Medical College and Maryland Medical College. After luncheon at the hall of the Faculty at 1.30, the scientific meeting was resumed at 3 p. m. with a paper or address by Dr. E. H. Bradford of Boston, entitled "A Study of the Human Gait." The different kinds of gait were copiously illustrated by instantaneous photographs, which were projected by a lantern on a screen. The human gait, he said, is ordinarily divided into the walk and the run, the distinction between the two being based on the fact that in the former one foot is always on the ground, while in the latter both feet may be in the air at the same time. The walk, again, can be subdivided according to the force used in propelling the trunk forward, and the manner in which that force is used. The varieties of walk are: The upright gait,

1899

seen in all cities and common among shoe-wearing people, especially those that are corpulent and those walking down an incline. The second form is the inclined-forward gait, seen in barefooted and moccasined individuals, in snow-shoeing, in young children and in those walking in slippery places and uphill. An acquaintance with the variations in the normal walk is necessary in the recognition of the limp.

Dr. Abraham Jacobi, of New York, came next, his subject being "European Medicine about 1799." It is difficult to epitomize Dr. Jacobi's learned and sparkling address; only a few of his ideas can be reproduced here. The eighteenth century, he said, was one of theories and systems, all of which were to pass away. There was little knowledge of actual facts, and hence reasoning was imperfect and metaphysical throughout. Some went so far as to say that science should be based on and constructed out of the working of the intellect only. Pathological processes were explained by the unknown action of the nervous system. Irritability and sensibility were the forces to which both health and disease were to be referred. These forces were said to be independent of structure and function. Thus inflammation and fever were diseases not of the organism but of irritability; typhoid fever was an exaltation of sensibility; septic fever the absence of irritability. Therapeutics was mostly exciting. With men's minds so obscured, words were meaningless, and Mesmerism and Hahnemannism found a ready welcome on the Continent at the close of the century. German literature especially was obtuse, and had neither room for nor thought of exact observations. According to Cullen, the nervous system was the source of life and of all diseases, and it was through it that remedies showed their action; drugs act on the nerves, which are either stimulated or weakened. Yet, unlike the Germans, the English were nearly immune from

the domination of theories and left their own Brown for other countries to go mad over. The worst enemies of the European profession, one hundred years ago, were its own members. Though they spoke Latin, they were coarse, self-willed, captious, jealous and noisy. Consultations were the theme of books and essays, and were pronounced to be impossible, purposeless, time-killing, revolting and lacerating; one author seriously advised the calling in of the police to preserve order in them. Notwithstanding this adverse opinion, there was a large amount of practical work. Institutions were founded, surgery and obstetrics took a great stride, many publications of permanent value were brought out, especially in the second half of the century. Haller taught the functions of different organs, mainly the muscles, and discovered the existence of sensory nerves and of nerve-currents going in different directions. The most fertile progress, however, was made through new researches in pathological anatomy and histology. Morgagni, "just previous to the foundation of your Faculty," introduced anatomical thinking into medicine. John Hunter established pathologic anatomy and experimentation on a sound basis; Jenner laid the foundation of sero and organo-therapy; Bichat created histology. The social position of the physicians improved greatly during the century, and towards its close they enjoyed the confidence and veneration of the public to a high degree. They largely took the place of the clergy. The physicians of the eighteenth century worked amidst drawbacks and discouragement, and therefore the more do we admire the colossal intellects and powerful workers that contributed so much to what we now are and have. In former ages advance was due to men of gigantic intellects. There has been an elevation of the masses, and hereafter institutions and societies will assume this work. Not many individual names will be

1899

remembered, but the achievements of Columbia, Harvard, Ann Arbor, University of Pennsylvania, Johns Hopkins and the rest will be enumerated amongst the glories of the coming centuries, "and great societies like yours will take their places in history."

Dr. Horatio C. Wood followed with a paper on "Nostrums," under which title he considered medicines, extra-pharmacopœial in their relations, and more or less secret or proprietary in their origin. More and more is the old apothecary store becoming a mere distributing centre, requiring little more scientific knowledge for its management than the corner grocery. At one time eighty per cent of the receipts of the druggist were from preparations made on prescriptions in his own shop, whereas investigation appears now to indicate that only about forty per cent of his sales are connected with legitimate pharmacy, the proprietary articles constituting fifty to sixty per cent. The magnitude of the change is shown in the fact that twenty years ago there were in Philadelphia about thirty wholesale drug stores, whereas there are now but six (not including those who sell to country stores), and most of these are kept alive by their own specialties. The profits of the proprietary and patent medicine business are enormous, but they have gone into the newspapers and magazines, lay and medical. Between \$14,000,000 and \$15,000,000 are spent yearly in the advertising of nostrums by the three hundred proprietary firms in this country. There has been of late a rapid growth among physicians of the habit of prescribing proprietary medicines, and it was estimated that about ten per cent of the whole patent medicine and proprietary trade of the country is carried on through them. Even more depressing than this, however, is the fact that no matter how worthless a remedy may be, a proprietor can almost invariably secure public recognition of excellence from men eminent in

the profession. It ought to be a first principle in ethics that no doctor should be allowed to give a certificate, a commendatory letter or anything else recommendatory, to any proprietor of anything under the sun, and that the only patented or proprietary drugs he will use shall be simple organic principles. With reference to the question whether the process or the product itself should be patented, Dr. Wood could not see why the man who invents a new principle, as antipyrin, should not have the same inalienable right to the results of his labors as he who first placed the eye in the front of the sewing needle.

Dr. Roswell Park, of Buffalo, read the last paper of the day, his subject being "Cancer as a Parasitic Disease." In his preliminary remarks he said that the invitation to address the Society had reached him through a gentleman for whom personally he had the highest and most affectionate regard, and whose attainments and natural gifts had caused him to be accepted everywhere as a leader in the profession. He regarded it as a rare opportunity to be able to bring before them the congratulations of a sister State (endeavoring with public aid to solve this great problem), and of a large connection of technical schools, upon the centennial anniversary of a society which has done so much good work and enrolled so many honorable names. By such a meeting it set an example which every State in turn should follow, and gave an impetus to collective work and investigation which every large association of men needs.

No subject has attracted more attention than the nature of cancer, but there has been a lack of concerted effort in its study. One of the greatest and most important divisions of opinion has been with regard to its local or constitutional origin. The origin of cancer is to-day a purely biological problem. The epithelial cells when they produce cancer must have some

1899

stimulus, internal or external. That which appeals most to our reason is some form of parasite. The startling increase of cancer all over the world was cited, the mortality being now four or five times what it was fifty or sixty years ago. Practically never till a year ago did any State or public government consider the study of its cause of sufficient importance to appropriate money to its solution. Though cancer hospitals have been richly endowed, not a laboratory has been founded in one of them. Limited grants have also been made by societies, but it remained for the State of New York to take up the matter and appropriate money annually for the equipment and maintenance of a laboratory for this special purpose. In May, 1898, the institution was organized and placed under the direction of the University of Buffalo, and active work has been constantly going on with promising results. The theory of infectivity of cancer is at least two hundred and fifty years old, and the communication of the disease from one part of the body to another is now a well recognized danger. The collective study is being taken up also in Europe. A few surgeons and pathologists formed a league some years ago in Paris for this purpose, and a quarterly journal is there especially devoted to this topic. In London, also, there is a Society for the Prevention of Cancer. A striking instance of the interest and trend of sentiment in this matter is to be seen in the April number of the *London Practitioner*, devoted entirely to cancer. All the writers therein agree in the parasitic nature and infectivity of the disease. Power, for instance, furnishes striking evidence in favor of transmission, and believes that it haunts localities; he also holds that the germ inhabits some intermediate host belonging to the vegetable or animal kingdom. Plimmer has examined 1278 cases of cancer, and found parasitic organisms (protozoa) in 1130. He does not, however, recognize a single

germ. He states that these protozoa are constantly present in cancer, and constantly absent in other diseased conditions. Others have isolated parasites and injected them into animals, producing tumors analogous to cancer.

Dr. Park has long been convinced, from clinical evidence, that the only rational explanation of cancer is the parasitic one. The illustrations in the various articles dealing with the subject show a remarkable similarity, if not identity, of forms. If, then, it be possible to isolate and cultivate from carcinoma a parasite which in its morphology appears identical with the cell inclusions in carcinoma, it will be acknowledged that we have gone a step farther and have demonstrated that the cancer inclusions are in all probability not the result of cell degeneration, but actual organisms. This much we may say has been accomplished. The indications thus are that we are at last approaching a not too far distant day when this, the greatest riddle of modern pathology, shall at last be solved.

A further paper on "Obstetric Teaching," which was to have been read by Dr. J. C. Edgar, of New York, was omitted, owing to the absence of the author.

The annual dinner was held at the Hotel Rennert in the evening. There was a large attendance of members and guests, and the hall was decorated with flags, plants, etc. An orchestra provided music during the entertainment. At the close of the menu the President, who was toastmaster of the evening, called upon those who were to respond to the various toasts. Owing to the active political canvass going on at the time, the Governor and the Mayor of Baltimore were detained elsewhere. Surgeon-General Sternberg, U. S. A., was therefore called upon and spoke upon the medical department of the Army during the recent war. Dr. James Tyson, of the University of Pennsylvania, followed. President D. C. Gilman spoke next

MEDICAL AND CHIRURGICAL FACULTY

1899 on "A Centennial Advancement in Medical Education." Hon. George R. Gaither, Attorney-General, who was to have spoken on "The Public," had doubtless political engagements, and therefore his toast was omitted, and Dr. Horatio C. Wood was called on, who made a humorous address on "Our Sister Societies of the Eighteenth Century." Dr. Geo. Ben. Johnston responded to the toast, "Our Sister State Medical Societies," and in the absence of Dr. J. McPherson Scott, Dr. Clotworthy Birnie answered the last set toast, "The County Medical Societies." Being called upon, Drs. Ösler and Kelly closed the evening with a few extempore remarks. The former, proposing "Our Worthy Selves, the Medical and Chirurgical Faculty," spoke of the need of an endowment of a proper home for the Faculty, one commensurate with its age and importance, and the size of this city in which it is located. He pointed to what had been done in New York, Brooklyn, Philadelphia, Hartford and other places to provide for the wants of the profession, and said that with united effort we could accomplish as much here. Dr. Kelly extended a most hearty invitation to the country doctors to visit his clinics at all times.

The morning of the fourth day was given to a demonstration at the Hospital for Relief of Crippled and Deformed Children, Charles and Twentieth Streets, and the afternoon to receptions at the Sheppard and Enoch Pratt Hospital, Towson, and the Springfield Hospital for the Insane, Sykesville, Md.

The business meeting was held at 8 p. m. The Treasurer's report showed the following: Total receipts, \$4018.39, including membership fees, \$2629.20; donation of Mr. Wm. F. Frick, \$500; donation of Mr. Frank Frick, \$50; donation of Mr. Reverdy Johnson, \$100; rent of hall, \$291; medical exhibit, \$103.88. Total expenses, \$3431.64, leaving a balance of \$586.75. The building fund amounted to \$3638.60, \$1450 representing

donations during the year. The Executive Committee reviewed the work of the year, "resulting in the largest and most successful meeting ever held by the Faculty." Particular credit is given to those having charge of the exhibits, which will be spoken of later. The Library Board reviewed the career of the library briefly, and reported that during the year 1899-1900 more than 1000 books had been taken out and there had been over 3500 readers. It had been the most prosperous twelve months in the history of this department. The total additions in volumes had been 2323, of which 1846 were donations, 281 from the Frick Fund, 143 by purchase and 53 from the Book and Journal Club. Among the donations were 918 volumes from the widow of the late Dr. Geo. H. Rohé, 504 from Dr. Claude Van Bibber, 135 from the late Dr. Starr, and 76 from the late Dr. Whiteford. The number of journals regularly received was 143. The total expenses were \$939.05, leaving a balance from the amount appropriated by the Faculty of \$60.95. This does not include the \$650 of the Frick donation, which was expended in the purchase of new books, as mentioned above.

The Committee on Sanitation, very pardonably recalling its initiatory work in the establishment (1896) of the Municipal Bacteriological Laboratory, and (1897) of the Maryland Public Health Association, and its other labors in connection with pure milk, sewerage, sweat-shops, school vaccination, etc., made an important announcement in reference to the question of public baths, which was that, through the aid of the City Bath Commission, "a generous benefactor has allowed himself to be discovered who guarantees a donation sufficient to erect two large, ornamental and thoroughly equipped buildings." The name of this benefactor was Mr. Henry Walters, and the first of the two buildings has just been turned over to the city (May, 1900).

MEDICAL AND CHIRURGICAL FACULTY

1899

The Committee on Preventable Blindness reported that there had been no case requiring prosecution of midwives for neglect of the law. The importance of a law requiring the registration of midwives was urged, that they might be notified at frequent intervals of the ordinance relating to ophthalmia neonatorum.

The Committee on Country Medical Societies reported great success in arousing and stimulating the interest of the county physicians. Whereas a year ago there had been but three, or at most four, county medical societies, "as a distinct outgrowth of the generous and affectionate sympathy of the country doctors for this maternal society, there are now, either existent or in process of formation, not less than fifteen, and new life has been infused into the older ones."

The report of the Committee on Membership proposed 104 candidates, of whom 99 were elected, 3 being ineligible by reason of not having taken the State Board examination, and 2 being rejected.

A committee of three was appointed to report at a special meeting, for the action of the Faculty, such amendments to the Medical Practice Act as might seem called for, including the requirement of a four years course of lectures.

The Executive Committee and Board of Trustees were directed to begin during the coming year an attempt to raise an endowment fund, for the purpose of securing a more suitable home for the Faculty.

A vote of thanks was passed to the President and Board of Trustees of the Johns Hopkins University for the use of McCoy Hall and adjacent rooms, and to the various committees of the Faculty who had contributed to make the centennial a success.

Dr. W. W. Keen was elected an honorary member.

The election of officers resulted in the choice of the following: President, Dr. Clotworthy Birnie; Vice-Presidents, Drs. Sam

uel Theobald and David Streett; Secretary, Dr. J. Williams Lord; Treasurer, Dr. Thomas A. Ashby; Executive Committee, Drs. Osler, Tiffany, Chew and C. G. Hill; Trustees, Drs. Tiffany, W. H. Welch, Osler, Ashby, Brinton, Taneyhill, Birnie, Brush and Chas. M. Ellis.

After a few appropriate remarks by the President, the Centennial Meeting was declared adjourned.

At this time the membership of the Faculty included 648 names, of whom 633 were active and 15 honorary members. The names of the latter were Drs. Roberts Bartholow, John S. Billings, James R. Chadwick, David W. Cheever, S. Solis Cohen, Wm. T. Councilman, Reginald H. Fitz, Joseph Tabor Johnson, Wm. W. Keen, Frederick Lange, John W. Mallett, S. Weir Mitchell, M. Allen Starr and James T. Whittaker.

No account of the great Centennial Meeting would be complete without a description of the exhibits, of which there were four: 1. Portraits, busts and relics of founders and of distinguished deceased physicians. 2. Books and portraits to illustrate epochs in the history of medicine. 3. Collection of books illustrating the condition of medicine in the year 1799. 4. Collection of works illustrating the development of art in medicine.

The first occupied the entire first floor of the corridors of McCoy Hall, the pictures being hung along the walls and the relics occupying show cases. The printed catalogue contained 274 entries, and there were a number besides which came too late for entry. There were portraits in oil, crayon, water colors and pencil, daguerreotypes, photographs, busts in ivory, bronze and plaster, miniatures on ivory and china, silhouettes, diplomas, certificates and licenses, letters, inscriptions, bills, essays, manuscript notes, lectures, diaries, epitaphs, inaugural dissertations, indentures, commissions, books and tickets of attendance, instruments, knives, mortars, pestles, pill tiles, spec-

MEDICAL AND CHIRURGICAL FACULTY

1899 tacles and cases, medicine cases and chests, syringes, balances, seals, medals and swords. Among the diplomas were those of Edinburgh, Glásgow, Aberdeen, Royal College of Physicians, London, Universities of Pennsylvania and Maryland, and Washington University, Baltimore. Many societies were represented by diploma, certificate and license. There were busts of Æsculapius, Nathan R. Smith, John Buckler, Christopher Johnston and Samuel Baker. Among the artists represented in the oil portraits were Sir Peter Lely, Gilbert Stuart, Rembrandt and William Peale, Morse, Sully, Jarvis, Pennington, Corner, Duncan, Hallwig, Dietrich, Miller and Woodville.

This exhibit naturally attracted most attention, and as the exhibition was continued for an entire week it was visited by thousands of persons, attracted by curiosity, interest or relationship. Dr. H. Barton Jacobs had charge of this display.

The other exhibits were held in the Donovan Room, and were under charge of Drs. William H. Welch, J. Whitridge Williams and George Reuling. Perhaps the most interesting objects in Dr. Welch's exhibit were the photograph of the Ebers papyrus, 1500 B. C., and the Assyro-Babylonian cuneiform tablets of the physician Arad-Nana, 680 B. C., translated by Dr. Christopher Johnston. The condition of medicine in the year 1799 was illustrated by ten wall tables giving a description of the medical periodicals and text-books in the various nations at that period. The books themselves, obtained from the Surgeon-General's Library at Washington, were exhibited in cases. Other tables described the principal events of medical interest during the year 1799 and portraits and instruments of distinguished men living then.

To illustrate the development of art in medicine, the works of Vesalius, Dürer, Albinus, Haller, Hunter, Scarpa, Rayer and others, to the number of eighteen, were shown, commencing with

Petrus de Montagnana, supposed to be the first illustrated medical work.

The collection of drugs, instruments and books in the basement has already been referred to, and attracted much attention.

A bureau of information and registration was maintained in the corridor throughout the exhibition and was of great service to the members and visitors.

Having thus brought these annals to the close of the Centennial Meeting, it only remains for me to make some general remarks in conclusion.

The history of the Medical and Chirurgical Faculty is essentially that of the medical profession during the last one hundred years. As the only general organization of physicians in the State, it has always stood as their representative, and upon it alone has devolved the responsibility of looking after their common interests. But as the interests of the profession and the community at large are inseparable, it has also had higher and more far-reaching duties to subserve—the care of the public health and welfare. How it has fulfilled this wider function the preceding pages will show. Though often thwarted by prejudice and ignorance, it has steadfastly kept the chief object of its foundation in view and sought to advance the public good. In the beginning it supplanted chaos with order, marshaled the best elements of the profession into organized and legalized form, and established a standard by which the public might be able to distinguish the true from the false in medical pretension and practice.

Although it cannot be claimed that all that has been done in the advancement of medical and health interests in Maryland since 1799 has originated in the Medical and Chirurgical Faculty, it is nevertheless true that most of such move-

MEDICAL AND CHIRURGICAL FACULTY

1899

ments have had their origin directly from it, and it may be said with truth that nothing of importance has been undertaken without its members having borne a leading part in it. The frequent prevalence of yellow fever in this State during the early years of the Faculty, and especially the dread visitations of 1800 and 1819-20, presented opportunities for advice and action to which it responded with the most liberal and self-sacrificing spirit. The introduction of vaccination into America by a distinguished member of the Faculty, coincidentally with Dr. Waterhouse, of Boston, afforded a fine opportunity for the enlightened public spirit of its members which they were swift to utilize, and this Association enjoys the proud distinction of having been the very first of American organizations to welcome and formally endorse this great boon to humanity. Indeed, so eager were the members to propagate the blessings of this great discovery, that they almost forced it upon the unwilling public, actually, in their enthusiasm, offering premiums to those who would submit to its performance. And vaccine physicians were first appointed for Baltimore on the recommendation of the Faculty. In the epidemics of cholera, its members gave their services freely, and sometimes their lives. Its intimate connection with the founding of the first medical college in the State, by which the advantages of full and systematic instruction were early brought within the reach of the youth of Maryland, has been described in detail. The part taken by the Faculty in the founding of the Maryland College of Pharmacy in 1841 and in its reorganization in 1856, is pleasant to contemplate in view of the valuable work done by that excellent institution and the high rank it has attained in a department so closely allied to our own. The efforts for the registration of births and deaths, begun by Dr. George Buchanan, a founder

MEDICAL AND CHIRURGICAL FACULTY

of the Faculty, in 1790, and continued from time to time with the endorsement of the Faculty until their successful consummation; the laws of 1882 and 1890, legalizing anatomical study in the State; the founding of a Nurses' Directory in 1882; the improved law relating to the insane of 1886, and its outcome, the Lunacy Commission of Maryland; the establishment of an institution for the care and education of feeble-minded children in 1887; the establishment of the bacteriological laboratory of Baltimore in 1896 for the supervision of the city water supply, early detection of infectious diseases, analysis of suspected foods, etc.; the share taken in the founding of the Maryland Public Health Association in 1897, an organization which has entirely altered the aspect of public sanitation in Maryland, and has already placed the State in the very front rank of sanitary excellence; the successful protest against reductions in the appropriations made by Congress to the library of the Surgeon-General's office in 1891 and again in 1894, and to the publication of the Index Catalogue of the same library in 1893; the appropriations by the City Council in 1892 for a Hospital for Infectious Diseases and a disinfecting plant; the successful work of the Committee on Preventable Blindness, 1893-94, by which so many eyes are saved from the destructive effects of ophthalmia neonatorum; the efforts for the establishment of a National Bureau of Public Health, 1893; the providing a second Hospital for the Insane, 1894; the introduction of free public baths and a Walker-Gordon laboratory into Baltimore in 1895, and the successful efforts against the machinations of the antivivisectionists in 1896, are some of the contributions of the Medical and Chirurgical Faculty to the welfare of the State. Of some of these measures, we have the assurance of those who know, that their passage was directly due to the fact

1899

MEDICAL AND CHIRURGICAL FACULTY

1899 that they were endorsed and supported by the organized profession of the State.

After all the vicissitudes of the century, it cannot but be a source of the deepest congratulation to us all that we have reached the close of this period with our organization so strong, so united, so influential. And in nothing, it seems to me, can we congratulate ourselves more sincerely than in the restoration of the power of examination and license, lost by the vicious legislation of 1838, but happily recovered almost at the very close of the century.

What a grand future of usefulness opens to our Society in the second century of its career upon which it has just entered! Unified in purpose and action, spurred on by the glorious memories of the past, inspired by the great and good men who have preceded us, and animated with the prospect of a future full of hope and promise, we seem to have reached a point in our career for which the older physicians yearned in vain.

In the midst of our prosperity let us not, however, forget the increased responsibilities which it brings and the pressing duties which await us in many new fields of activity. Let us rather welcome the blessed inheritance of self-sacrifice and usefulness and embrace the boundless opportunities of doing good. And last, but not least, let us cherish with pride our membership in this old and honorable Society; let us guard jealously its name and fame and transmit them to our successors of the twentieth century with lustre undimmed!

BIOGRAPHY.

This section contains the names of all who have been upon our lists during the century (1799-1899). No distinction was made between license and membership from 1799 to 1839. Since the recovery of the licensing power the distinction has been observed and accordingly only the names of members are given since 1892. A star indicates decease. A date immediately following a name indicates the time of admission.

- ABBOTT, ALEXANDER CREVER. Born at Baltimore, February 26, 1860. M.D., University of Maryland, 1884; Assistant in Bacteriology and Hygiene, Johns Hopkins University, 1889-91; First Assistant Laboratory of Hygiene, University of Pennsylvania, 1891-96; Director of Laboratory of Hygiene and Professor of Hygiene, University of Pennsylvania, 1896—; Director of Laboratory of Hygiene, Bureau of Health, Philadelphia, 1897—; author of "Principles of Bacteriology," 12mo, first edition, Philadelphia, 1812; sixth edition, 1902; "Hygiene of Transmissible Diseases," 8vo, Philadelphia, 1899.
- ABEL, JOHN J. 1895. Born at Cleveland, O., May 19, 1857. Ph.B., University of Michigan, 1883; Graduate Student, Johns Hopkins University, 1883-84; pursued medical studies in Germany, Austria and Switzerland; M.D., University of Strasburg, 1888; Professor of Materia Medica and Therapeutics, University of Michigan, 1891-93; Professor of Pharmacology and in charge of Physiological Chemistry, Johns Hopkins Medical School, 1893—; Associate Editor, *Journal of Experimental Medicine*; Special work: Researches in Pharmacology and Physiological Chemistry, published in European and American journals. Station L, Baltimore.
- ABERCROMBIE, JOHN ROBERT. 1897. Born at Baltimore, February 21, 1869. A.B., Johns Hopkins University, 1893; M.D., University of Maryland, 1895; Coroner, 1896—; Lecturer on Materia Medica, Woman's Medical College, 1897—; Chief of Clinic in Skin Diseases, University of Maryland; Physician to Shelter for Aged Colored Women; Medical Examiner, American Legion of Honor. 827 North Eutaw Street, Baltimore.
- ADAMS, AMOS. 1837. Not M.D.; practiced at Smithsburg, Washington County, Md., a few years, but moved away about ten years ago. See Treasurer's book and lists of 1848, 1853 and 1873.

MEDICAL AND CHIRURGICAL FACULTY

- ADAMS, JAMES FREDERICK. 1896. Born at Rehohoth, Somerset County, Md., September 22, 1869; son of Dr. F. A. Adams. Educated at St. John's College, Annapolis; B.S. and B.L., St. John's, 1890; M.D., University of Maryland, 1894; Assistant, University of Maryland Hospital, 1894; Assistant U. S. Marine Hospital, 1895; Acting Assistant Surgeon, U. S. Marine Hospital, 1896; moved to Eastern Shore; Director, Peninsula General Hospital; resides at Pocomoke City, Md.
- *ADDISON, EDWARD BRICE. 1818. Born at "Oxon Hill," Prince George County, Md., 1794. Educated at St. John's College; pupil of Dr. George Clarke, Georgetown, D. C., and of Philip Syng Dorsey, Philadelphia; M.D., University of Pennsylvania, 1815; practiced at Baltimore, Upper Marlboro and Reisterstown; retired in 1849 and moved to Alexandria, Va.; removed to Washington, D. C., 1877, where he died October, 1884 (1878?); was completely blind from cataract for fifteen years. See list of 1848.
- *ADDISON, JOHN. 1853. M.D., University of Maryland, 1830; settled at Baltimore; Vaccine Physician, Baltimore, 1855-59; died 1859 (Q.). See list of 1853.
- ADLER, HARRY. 1898. Born at Baltimore, August 11, 1872. A.B., Johns Hopkins University, 1892; M.D., University of Maryland, 1895; Visiting Physician, Hebrew Orphan Asylum; Chief of Clinic Diseases of Stomach and Intestines and Laboratory Instructor in Clinical Pathology, University of Maryland; Associate Professor, Diseases of Stomach, 1901—. 1215 Madison Avenue, Baltimore.
- *ADREON, STEPHEN W. 1828. Born at Baltimore. M.D., University of Maryland, 1828; settled at St. Louis, Mo., 1828; Health Officer and Member City Council, St. Louis; a strong Union man; took an active and important part in retaining the State of Missouri in the Union. Died at St. Louis, December 9, 1867.
- *AHL, JOHN PETER. Born in Germany, 1748. Surgeon's Mate, Colonel Armand's Maryland Legion, 1777; wounded at White Plains; recovered and returned to the army under Gen. P. Muhlenberg until 1783; after war resided in Augusta County, Va.; in Westmoreland County, Pa., 1820-21; moved to Baltimore, 1821; became a pensioner (Pennsylvania rolls), May 1, 1821. Died at Baltimore, July 13, 1827.
- *AIKIN, WILLIAM E. A. 1840. Born in New York State, 1807. Educated at Rensselaer Institute on the Hudson; Licentiate New York

MEDICAL AND CHIRURGICAL FACULTY

State Medical Society; M.D. (Honorary), Vermont Academy of Medicine; soon abandoned practice and devoted himself to science; came to Baltimore, 1832; Professor of Natural Philosophy, University of Maryland; Assistant to Professor Ducatel, 1836; on Geological Survey, Virginia, 1837; Professor of Chemistry, University of Maryland (Regents' Faculty), 1837-83; Emeritus Professor, 1883-88; Dean of Faculty, 1840-41 and 1844-55; Lecturer, Maryland Institute; City Inspector of gas and illuminating oils; LL.D., Georgetown College, 1843. Died at Baltimore, May 30, 1888.

ATME, JOHN, 1813. See list of 1848.

*AITKEN, JAMES. 1828. Son of Andrew Aitken. M.D., University of Maryland, 1824; practiced at Baltimore; was here in 1847. Died at Baltimore, January 22, 1857.

*ALBERS, HENRY. 1839. Born at Bremen, 1812. M.D., Göttingen, 1837; studied in hospitals at Vienna, 1837-39; Physician to German Society. Died at Baltimore, October 7, 1882. See Treasurer's book.

*ALBERT, CHARLES. 1878. Born at Baltimore, 1851; son of Hon. Wm. J. Albert. Pupil of Dr. N. R. Smith; M.D., University of Maryland, 1872; pupil of Sir James Paget, London; practiced seven years at Baltimore, giving special attention to Spinal Diseases. Died at Easton, Md., June 30, 1882.

*ALCOCK, EDWARD J. 1827. Of Baltimore. M.D., University of Maryland, 1827; present at annual convention of 1830. In list of 1848 marked dead. In a corrected list of 1837, Dr. Fonerden marks him dead.

*ALDRIDGE, JOHN HENRY. 1875. Born 1832. M.D., University of Maryland, 1855; Assistant Surgeon United States Navy; resigned. Died at Baltimore, March 21, 1889.

*ALEXANDER, EDWARD. Of Ellicott's Mills. Born in Virginia. See Trans., 1853, p. 10.

*ALEXANDER, ASHTON. *Founder.* 1799. Born near Arlington, Va., 1772. Student of Dr. Philip Thomas, of Frederick, Md.; M.D., University of Pennsylvania, 1795; first settled in North Carolina; came to Baltimore in 1796; Commissioner of Health, Baltimore,

MEDICAL AND CHIRURGICAL FACULTY

1804-05 and 1812; Attending Physician, Baltimore General Dispensary, 1801-03; First Secretary of Medical and Chirurgical Faculty of Maryland, 1799-1801; Treasurer of Medical and Chirurgical Faculty of Maryland, 1801-03; Consulting Physician, Baltimore Hospital, 1812; President District Medical and Chirurgical Society, 1819-20; Provost, University of Maryland, 1837-50; married, first, daughter of Dr. Philip Thomas, and second, Miss Merryman. The last surviving charter member of the Medical and Chirurgical Faculty. "A grand old man with magnificent physique; wore knee and shoe buckles and stockings, and carried a gold-headed cane; fond of dinners and society." Died at Baltimore, February, 1855.

ALGIRE, HARRY CAIRNES. 1897. Born at Hampden, then in Baltimore County, Md., August 31, 1873. M.D., University of Maryland, 1895; Assistant in Surgical Dispensary, University of Maryland; Sanitary Inspector, Baltimore, 1896-98; Surgeon, Pennsylvania Railroad, 1898—. 516 Fifth Avenue, Hampden, Baltimore.

ALLEN, L. M. 1899. Born at Berryville, Clarke County, Va., August 11, 1874. Educated at Shenandoah University School; attended medical lectures at the Universities of Virginia and Maryland; M.D., University of Maryland, 1896; Resident Physician, Lying-in Hospital, University of Maryland, 1896-97; Chief of Obstetric Clinic and Demonstrator of Obstetrics, University of Maryland, 1897-1900; Associate Professor of Obstetrics, 1900—. 1919 Maryland Avenue, Baltimore.

*ALLEN, RICHARD NUN. Born in Harford County, Md., 1796. M.D. and Gold Medalist, University of Maryland, 1817; Censor, 1819. Died at Savage Factory, Harford County, Md., April 27, 1833.

*ALLEN, ROBERT. Brother of last-named. M.D., University of Maryland, 1813. Of Cecil County, Md. In list of 1848 marked dead.

*ALLEN, ROBERT T. M.D., University of Maryland, 1822. Near Port Deposit, Cecil County, Md. See list of 1848.

*ALLENDER, JOSEPH. 1801 (?). Born at Richmond, Va., 1770. Educated in Baltimore County Md.; began practice at Fells Point, Baltimore, 1795; Physician, Baltimore General Dispensary, 1801-02; Surgeon, Maryland Militia, 1804-10; Member of City Council, 1806-07; Surgeon Sixth Regiment of Maryland Militia, 1814; Physician to Humane Society. 1819. Died at Baltimore, 1834.

MEDICAL AND CHIRURGICAL FACULTY

- *AMES, DELANO. 1895. Born at Springfield, O., 1868. A.B., Johns Hopkins University, 1891; M.D., University of Maryland, 1892; Lecturer on Pathology, Baltimore Medical College; Pathologist, Union Protestant Infirmary. Died at Baltimore, March 10, 1899.
- *AMOS, CORBIN. 1811. Born near "The Rocks," Harford County, Md., March 31, 1784. Pupil of Dr. Thomas E. Bond; M.D., College of Medicine of Maryland (University of Maryland), 1812; Surgeon's Mate, Thirty-ninth Regiment of Maryland Militia, 1814; Physician to City Almshouse; Member of City Council, 1832-33. Died at Baltimore, July 21, 1866.
- *ANDERSON, ALEXANDER M. Born at Chestertown, Md., September 25, 1816; grandson of J. M. Anderson, *Founder*. For a number of years a druggist at Mobile, Ala.; studied medicine and practiced at Chestertown. Died September 7, 1859. See list of 1848
- *ANDERSON, ALFRED. 1826. Of Williamsport, Washington County, Md. Moved to Alabama, where he died. See lists of 1848, 1853 and 1873. (There is an "Alfred Anderson, S. C., 1830," in Catalogue of University of Pennsylvania.)
- *ANDERSON, ASA. 1816. Of Queen Anne, Prince George County, Md. See list of 1848.
- ANDERSON, CHARLES LOFTUS GRANT. 1892. Born in Washington County, Md., 1863. Educated at University of Pennsylvania; M.D., College of Physicians and Surgeons, New York, 1884; House Physician and Surgeon, Jersey City Hospital, 1885; Acting Assistant Surgeon, U. S. A., 1886; Assistant Surgeon, 1886-88; resigned; Acting Assistant Surgeon, U. S. A., 1898; served in Santiago campaign; Surgeon, Twenty-ninth U. S. V. (in Philippines), 1899.
- ANDERSON, EDWARD. 1892. Born near Rockville, Md., May 3, 1841. Educated at Rockville Academy; taught school several years; M.D., University of Maryland, 1875; Physician to Montgomery County Almshouse, 1889-99; practices near Rockville.
- *ANDERSON, JAMES. *Founder*. 1799. Born near Rockville, Montgomery County, Md., 1760. (The family moved from Charles to Montgomery County in 1754.) At age of sixteen joined Revolutionary Army, but served only a short time, owing to an attack of smallpox; attended lectures at University of Pennsylvania, 1789 and 1790; practiced at Rockville and surrounding country from 1791 until his death; Surgeon to the draft during War of 1812; had a

MEDICAL AND CHIRURGICAL FACULTY

large and lucrative practice, extending partially over four hundred and entirely over one hundred square miles; continued to inoculate until 1814. He owned four farms, all lying within a radius of one mile from Rockville, where he lived, aggregating eight hundred acres, with slaves enough to work them. Died at Rockville, May 9, 1836.

*ANDERSON, JAMES. Of Harford County, Md. Pupil of Dr. Corbin Amos; M.D., University of Maryland, 1815. Died February, 1816.

*ANDERSON, JAMES MOAT. *Founder.* 1799. Born, 1752; youngest son of Dr. James Anderson, who emigrated from Scotland to Kent County, Md. Educated at University of Edinburgh, remaining long enough to procure a certificate of merit, but not graduating. "He achieved in that neighborhood [Chestertown] a reputation which few have since enjoyed; his practice was extensive and his services always in demand; he was fond of discussing his cases carefully in consultation, and it was seldom that he erred in judgment; his speech was plain and unaffected, always to the point; in his duty walk he was conscientious and eminently pious, and looked upon as a model man; his appearance was unique and striking; though small in stature and limping in gait, his dignity was never laid aside; his person was slender and arrayed in a gray cloth, long-waisted, shad-breasted coat, reaching far below the knee, with standing collar and ample pockets, olive-colored velvet breeches, with silver knee buckles, such as were worn by gentlemen of that time; gray home-knit stockings and low-quartered shoes, which were exchanged in winter for red-topped boots, a low-crowned, broad-brimmed beaver hat and white-lawned stock buckled behind. In early youth he united with the M. E. Church and wore the white-lawned stock and broad-brimmed hat so characteristic of the leader of that sect" (Wroth, Trans., 1873). He retired at about sixty to his seat in the country, where he died December 8, 1820.

*ANDERSON, JAMES MOAT, JR. Born at Chestertown, Kent County, Md., 1774. "He was the oldest son of Dr. James M. Anderson and received his literary education at Washington College [Chestertown]; his medical studies were pursued under the immediate direction of Dr. Rush, of Philadelphia, and he attended lectures at the University of Pennsylvania; it is not known that he ever graduated, but he commenced practice with his father, and was,

† Certainly not. I have seen his signature to a diploma in 1808, and it is simply "J. M. Anderson, Jr.," whilst the other four "Perquisitores" all sign M.B. or M.D.

JOHN B. DAVIDGE

1768-1829.

MEDICAL AND CHIRURGICAL FACULTY

on his resignation, appointed one of the Examiners of the Eastern Shore; his business was select and remunerative, as he avoided extensive employment among the poorer classes; he enjoyed the reputation of being a skillful practitioner. He died at Chestertown very suddenly of heart disease, May 31, 1830." "Of medium size, well formed, of comely and graceful person, lordly in his carriage and deportment, exceedingly careful in his dress, a refined, well-bred gentleman" (Wroth, Trans., 1873).

*ANDERSON, JOHN WALLACE. 1828. Born at Hagerstown, Md., 1802. M.D., University of Pennsylvania, 1828; practiced a short time at Hagerstown; sailed for Liberia, Africa, January 17, 1830, and died two months after arrival there. See lists of 1848 and 1853.

*ANDERSON, JOHN WALLACE. 1830. Born at Rockville, Md., about 1805. Educated at Rockville Academy; M.D., University of Pennsylvania, 1830; practiced till time of death. Died at Rockville, July 8, 1867.

*ANDERSON, WARFIELD. 1801 (?). See list of 1807. (There was a "Warfield, Anderson, U. S. N. Surgeon, July 1, 1799, discharged August 31, 1801, under peace establishment"—Hammersley.) (See Warfield, Anderson.)

ANDRE, JAMES RIDGWAY. 1852. Born near Seaford, Sussex County, Del., September 18, 1823. Educated at Federalsburg Academy, Dorchester County, Md.; pupil of Prof. S. Chew; M.D., University of Maryland, 1850; practiced at Easton, Md., 1850-58; at Baltimore, 1858—. 1123 East Baltimore Street, Baltimore.

*ANDREWS, NATHANIEL W. 1820. Of Ohio. See list of 1848.

ANKRIM, LOUIS F. 1890. Born at Chestnut Level, Lancaster County, Pa., December 13, 1857. Educated at Chestnut Level Academy and West Nottingham Academy, Md.; M.D., College of Physicians and Surgeons, Baltimore, 1886; Assistant Demonstrator of Anatomy, College of Physicians and Surgeons three years; Visiting Physician, Bayview Hospital; Attending Physician, East Baltimore and City Hospital Dispensary; moved to Pittsburg, 1892; practices at 5201 Penn Avenue, Pittsburg, Pa.

*ANNAN, ANDREW. 1829. Born at Emmitsburg, Md., April 29, 1805. M.D., University of Maryland, 1827; Member State Constitutional Convention, 1864; Member Maryland Legislature, 1874. Died at Emmitsburg, July 7, 1896.

MEDICAL AND CHIRURGICAL FACULTY

- *ANNAN, ROBERT LANDALES. 1801 (?). Born at Neelytown, N. Y., November 22, 1765. Educated at Brown University, Providence, R. I.; certificate of Rush of two and one-half years' study with him, April 29, 1789; M.D., University of Pennsylvania, 1789; practiced at Emmitsburg, Md. Died July 12, 1827.
- ANNAN, ROBERT LEWIS. 1898. Born at Emmitsburg, Md., February 22, 1831. M.D., University of New York, 1855; reside. at Emmitsburg, Frederick County, Md.
- *ANNAN, SAMUEL. 1822. Born at Philadelphia, 1797. M.D., University of Edinburgh, 1820; thesis, "De Apoplexia Sanguinea;" President Royal Physical Society, Edinburgh, 1820; Assistant Guy's and St. Thomas' Hospitals, London, 1820-21; Founder of Washington Medical College, Baltimore, 1827; Professor of Anatomy and Physiology, Washington Medical College, 1827-34; Orator, Medical and Chirurgical Faculty, 1835; Attending Physician, Baltimore Almshouse, 1839-45; Professor of Obstetrics and Diseases of Women and Children, Transylvania University, Lexington, Ky., 1846-47; Professor of Practice, Transylvania University, 1848; Superintendent Western Lunatic Asylum, Hopkinsville, Ky., 1853-57; Surgeon, Baltimore and Ohio Railroad Line Steamships to Liverpool; Surgeon, C. S. A., 1861-64; published first recorded cases of Bronchotomy in Maryland (*American Medical Recorder*); invented an instrument for prolapsus uteri. Died at the Church Home, Baltimore, January 19, 1868.
- ANTRIM, WILLIAM W. 1877. Vaccine Physician, Baltimore, 1869. (The name does not occur in Polk, 1886—.)
- APPLEGARTH, EDWARD CAREY. 1892. A.B., Johns Hopkins University, 1887; Fellow, Johns Hopkins University, 1889; Ph.D., Johns Hopkins University, 1890; M.D., College of Physicians and Surgeons, Baltimore, 1892; practiced at Baltimore (Polk, 1893).
- *ARCHER, JAMES. 1801 (?). Born in Harford County, Md., August 2, 1779. Pupil of his father, J. Archer, M.B.; M.D., University of Pennsylvania, 1804; practiced in Harford County, Md.; removed to Mississippi, 1810. Died in Mississippi, May 15, 1815.
- *ARCHER, JOHN. *Founder.* 1799. Born at Churchville, Harford County, Md., May 5, 1741; son of Thomas Archer. Educated at Nottingham Academy, Cecil County; A.B., Princeton College, 1760; A.M., Princeton, 1763; studied theology and became a minister of

MEDICAL AND CHIRURGICAL FACULTY

the Presbyterian Church; studied medicine with Prof. John Morgan, M.D.; attended the College of Medicine of Philadelphia (*Collegium et Academia Philadelphiensis*, the forerunner of the University of Pennsylvania), 1765-68; practiced in New Castle County, Del., 1767; M.B., June 21, 1768, receiving the first diploma in a class of ten, the first medical graduate in America (this diploma is in the possession of the Faculty); began practice in Harford County, 1769; on Committee of Observation, 1774, and Chairman of the Committee, 1775; Major of Upper Battalion of Harford County, 1776; Delegate to Maryland Convention, 1776; Judge of the Orphans' Court, 1782; Presidential Elector, 1796; Member of Congress, 1801-07. Between 1786 and 1800 he trained fifty students in medicine at his place, "Medical Hall." "Doctor Archer was above medium size, possessing great bodily strength and had a large share of both moral and physical courage. His mind was of the combative order, never courting yet never declining controversy, if the cause to be upheld was of moment, and his sarcasm when roused is said to have been withering." "He was admired for his strength of character, he was honored for his incorruptible integrity. In his portraits his physiognomy is remarkably stern; his heart, however, was exceedingly kind and he was ever prompt to relieve the distressed or resent their wrongs." Died in Harford County, Md., September 28, 1810.

*ARCHER, JOHN, JR. 1801 (?). Born at "Medical Hall," Harford County, Md., October 9, 1777. Pupil of his father (John Archer, M.B.); M.D., University of Pennsylvania, 1798; Surgeon, Maryland Militia, War of 1812. Died at Baltimore, May 21, 1830.

*ARCHER, ROBERT HARRIS. 1801 (?). Born in Harford County, Md., August 28, 1775. Pupil of his father (John Archer, M.B.); practiced at Baltimore, 1798-1805; Physician to City Hospital, Baltimore; Surgeon, Twenty-seventh Regiment of Maryland Militia, 1799; at Lancaster, Pa., 1805-09; practiced in Cecil County, Md., 1809-19; Censor, 1819; Member of Legislature, 1819-23; removed to Harford County, 1822; on Governor's Council, 1823-27; Judge of the Orphans' Court, 1847-57. Died May 19, 1857.

*ARCHER, THOMAS. *Founder*. 1799. Born in Harford County, Md., February 23, 1768. Pupil of his father (John Archer, M.B.); practiced in Harford County, and died there October 7, 1821. He was an invalid for many years. "No human being could lay a wrong at his door."

MEDICAL AND CHIRURGICAL FACULTY

- ARCHER, WILLIAM S. 1892. Born in Harford County, Md., October 22, 1855. A.B. and A.M., Princeton College; M.D., University of Maryland, 1880; practices at Bel Air, Md.
- *ARMITAGE, JAMES. 1831. Born at Baltimore, 1811. Student of Dr. Corbin Amos; M.D., University of Maryland, 1831; Member of City Council, Baltimore, and President of Second Branch, 1851. Died at Baltimore, February 26, 1896.
- *ARMSTRONG, ROBERT W. 1810. Examined by Dr. Martin, of Eastern Shore Board, May 1. M.D., College of Medicine of Maryland, 1810 (?); settled at Baltimore, 1815. Of Eastern Shore of Maryland. In list of 1848 marked dead.
- *ARNEST, JOHN. 1811. Born at Baltimore (of Welsh descent). M.D., University of Pennsylvania, 1808; settled for practice at Baltimore; Surgeon's Mate, Fifty-first Regiment of Maryland Militia, 1814; Secretary, Medical and Chirurgical Faculty, 1813-17; Attending Physician to Baltimore General Dispensary, 1811-14; moved to Virginia, and died at "Nomini Hall," near The Hague, Westmoreland County, Va., about 1832-34. He was the first surgeon in the world to catheterize the male ureter during life. Died on steamer en route to Boston, June 16, 1895.

MEDICAL AND CHIRURGICAL FACULTY

- *BROWN, MORGAN, JR. *Founder.* 1799. Born 1769; eldest son of Joseph Brown, a farmer of Quaker Neck, Kent County, Md. Educated at the Free School of Chestertown and Washington College (no degree); student of Dr. Edward Worrell; being the oldest student he was frequently called to the bedside of the sick in the absence of his teacher, and such was his prudence and tact that when a mere tyro, he won golden opinions; attended lectures in Philadelphia, 1790-91; near the end of his course (February, 1791,) a general inoculation was practiced in Kent County, and he was called home to assist without receiving a diploma; being taken into partnership by Dr. Worrell, he entered at once on a large practice; having a strong taste for study, he lost no opportunity to improve his mind and add to his knowledge. He was highly esteemed by his professional brethren. In 1840 he had a severe attack of typhoid fever, which broke him down both physically and mentally. He was noted for the neatness of his appearance and the maturity of his judgment (Wroth, Trans., 1873). He was an ardent Federalist. Died October 6, 1841.
- *BROWN, NATHAN. 1826. Born on the Eastern Shore of Maryland. M.D. University of Maryland, 1826; credited first to Kent County; later, settled in Carroll County, Md.; Censor, 1840; State Senator, 1867-71; he practiced forty-five years; never married; he was a philanthropist. Died near Freedom, Carroll County, Md., 1873.
- BROWN, RICHARD W. 1853. M.D., University of Maryland, 1853. Of Baltimore. See list of 1853.
- *BROWN, SEPTIMUS. 1853. Born in 1827. M.D., University of Maryland, 1849. Died at Baltimore, January 31, 1883.
- *BROWN, THOMAS RICHARDSON. 1874. Born in Kent County, Md., April 6, 1845. Educated at the School of Letters, University of Maryland; pupil of Dr. N. R. Smith; M.D., University of Maryland, 1866; Assistant Surgeon, U. S. N., 1866-70; began practice at Baltimore, 1867; Professor of Clinical and Operative Surgery, College of Physicians and Surgeons, Baltimore, 1873; Professor of Surgery, College of Physicians and Surgeons; President, Medical and Surgical Society, Baltimore, 1879. Died at Baltimore, January 26, 1879.
- BROWN, THOMAS RICHARDSON. 1899. Born at Baltimore, September 11, 1872; son of last-named. Graduated from Baltimore City College, 1889; A.B., Johns Hopkins University, 1892; M.D., Johns

MEDICAL AND CHIRURGICAL FACULTY

Hopkins Medical School, 1897; House Medical Officer, Johns Hopkins Hospital, 1897-98; Instructor in Medicine and Chief of Medical Clinic, Johns Hopkins Dispensary; Associate Professor of Clinical Medicine, College of Physicians and Surgeons. 1033 Cathedral Street, Baltimore.

Educated at Loyola College; A.B. and A.M., Loyola; M.D., University of Maryland, 1868; Lecturer on Chemistry, College of Physicians and Surgeons, and Editor *The Physician and Surgeon*, 1872-73. 1731 East Baltimore Street, Baltimore.

*DAVIDGE, JOHN BEALE. Born at Annapolis, Md., 1768. A.M., (St. John's College ?), 1789; pupil of Drs. James and William Murray, Annapolis; then attended lectures at Philadelphia and at Edinburgh, but took M.D. at the University of Glasgow, 1793; practiced first at Birmingham, England; then returned to Maryland and settled at Baltimore, 1796; Attending Physician, Baltimore General Dispensary, 1801; began medical teaching in 1802; Founder of the College of Medicine of Maryland (University of Maryland), 1807; Professor of Anatomy or Surgery, College of Medicine of Maryland, 1807-29; Dean, College of Medicine of Maryland, 1807-11, 1813, 1814, 1821; Orator Medical and Chirurgical Faculty, 1805; he was the author of "Nosologia Methodica" (in Latin), two editions, 1812 and 1813; "Physical Sketches," two vols., 1814 and 1816; "Treatise on Yellow Fever," 1798; "Treatise on Amputation," 1818; edited "Bancroft on Fevers," 1821, and a quarterly journal, entitled *Baltimore Philosophical Journal and Review*, 1823, of which only one number appeared. His important operations were, a total extirpation of the parotid gland, 1823; ligation of the gluteal artery for aneurism; ligation of the carotid artery for "fungus of the antrum." He invented the "American method of amputation." His death was due to carcinoma of the face. "Of pleasing address, very remarkable colloquial powers and high professional character." Died at Baltimore, August 23, 1829.

DAVIDSON, BENJAMIN REED. 1899. Born in Anne Arundel County, Md., May 26, 1846. Educated at the Maryland Agricultural College and Dickinson College; attended medical lectures at the Uni-

MEDICAL AND CHIRURGICAL FACULTY

versities of Virginia and Maryland; M.D., University of Maryland, 1867; Physician to Anne Arundel County Almshouse for seven years; County Treasurer; practices at Davidsonville, Md.

DAVIDSON, CHARLES FITZSIMMONS. 1893. Born at Queenstown, Queen Anne County, Md., September 29, 1865; son of Dr. James Davidson, 2d. M.D., University of Maryland, 1888; Resident Physician, Lying-in Hospital, University of Maryland, 1888-89; studied in Berlin, 1889-90; Chief of Clinic of Gynecology, University of Maryland, 1890; settled at Queenstown, 1891; moved later to Easton.

*DAVIDSON, JAMES. *Founder.* 1799. Born at Aberdeen, Scotland, 1743. M.D., Royal College of Aberdeen, 1769; emigrated to Queenstown, Md., 1771; Attending Physician, Queen Anne's County Almshouse, 1792-1804. Died at "My Lord's Gift," Queen Anne's County, June, 1811.

*DAVIDSON, JAMES. Born at Rockland, Cecil County, Md., March 3, 1805; son of last-named. Pupil of Dr. Ashton Alexander, of Baltimore; M.D., University of Maryland, 1827; practiced at Queenstown, Queen Anne's County, Maryland, 1832-78. Died at Queenstown, February 24, 1888.

*DAVIS, DAVID. 1810. Credited with M.D. in Kent County MS. Records; Surgeon's Mate, First Sub-Legion, June, 1796; in Fourth Infantry, November, 1796; Post Surgeon at Detroit, April 1, 1802; resigned, January 20, 1808; settled on the Eastern Shore of Maryland. "Buried January 25, 1844, in Cecil County, on Mrs. Allithea Wicke's Farm" (MS. Records of Kent County). In list of 1848 marked dead. (See also Pagett, David T.)

*DAVIS, ELIJAH. *Founder.* 1799. Born in Chester County, Pa., July 22, 1760. Attended medical lectures at the University of Pennsylvania, 1784-85; was taken prisoner at the battle of Long Island, 1776; carried to England and imprisoned on Jersey prison ship for two years until exchanged; went to Paris and studied medicine there; came home, but went a second time to Paris; is said to have taken M.D. at the University of Paris; came to Harford County Md., June, 1786; practiced at Bellevue, Harford County; Member of the House of Delegates, 1800, 1803, 1807, 1808, and of the State Senate, 1811; Honorary Member of the Medical Society of Baltimore (founded 1812). Died in Harford County, Md., June 29, 1829.

*DAVIS, JOHN. Born in Chester County, Pa.; eldest brother of Elijah Davis. Attended lectures at the College of Medicine of Phila-

MEDICAL AND CHIRURGICAL FACULTY

delphia; the Davis family say he graduated in the same class with John Archer (1768; a mistake); House Surgeon; Surgeon, First Rifle Battalion of Pennsylvania, 1776; practiced in Chester County, and died there.

DAVIS, JOHN. 1897. Born at Baltimore, January 29, 1853; son of James Conry Davis. Educated at Baltimore City College; M.D., University of Maryland, 1887. 2102 Orleans Street, Baltimore.

DAVIS, MEREDITH. 1836. M.D., University of Pennsylvania, 1835. See list of 1848.

DAVIS, PINKNEY L. 1892. Born at Mount Airy, Carroll County, Md., April 5, 1860. M.D., University of Maryland, 1888; Chief of Clinic of Nervous Diseases, University of Maryland; Coroner of Baltimore, 1892-96; Member of the Board of Police Surgeons of Baltimore. 913 North Fulton Avenue, Baltimore.

DAVIS, S. GRIFFITH, JR. 1897. Born in Harford County, Md., May 2, 1867. C. E., Virginia Military Institute; M.D., University of Maryland, 1893; Resident Physician, Hospital of the Good Samaritan, 1893-95; Chief of Surgical Clinic, Woman's Medical College, Baltimore, 1897; Demonstrator of Anatomy and Osteology, Woman's Medical College, 1895-1902; Professor of Anatomy and Operative and Clinical Surgery, 1902—; Assistant Surgeon, Fifth Regiment, M. N. G., 1898—; Assistant Demonstrator of Anatomy, College of Physicians and Surgeons; Attending Physician, Baltimore General Dispensary. 1230 Light Street, Baltimore.

*DAVIS, SEPTIMUS. 1825. Born in Harford County, Md., October 12, 1801; son of Elijah Davis, *Founder*. M.D., University of Maryland, 1824. Died in Harford County, January 7, 1857. See lists of 1848 and 1853.

DAVIS, SMITH SEIBERT. 1897. Born at Wolfsville, Frederick County, Md., February 28, 1854. Educated at Mercersburg College, Pa.; M.D., University of Virginia, 1875; continued study at the University of Minnesota; practices at Boonsboro, Washington County, Md.

*DAVIS, THOMAS JOHN. 1828. Born at Brookville, Montgomery County, Md., July 25, 1805; son of Thomas Davis. Educated at Dickinson College; M.D., University of Maryland, 1828; returned to Brookville, was taken ill two days later, April 11, and died July 11, 1828. See Treasurer's book and lists of 1848, 1853 and 1873.

MEDICAL AND CHIRURGICAL FACULTY

- *DAVIS, WILLIAM H. 1846. Born at Baltimore, September 22, 1810. Graduated from Dickinson College; M.D., University of Maryland, 1833; Secretary, Medical and Chirurgical Faculty, 1848-51; Vice-President, Medical and Chirurgical Faculty, 1856-57. Died at Baltimore, January 21, 1881.
- *DAVISON, GARLAND HAMNER. 1894. Born in Maryland, 1841. M.D., University of Maryland, 1864; for many years he was engaged in business pursuits. Died at Baltimore, March 16, 1900.
- *DAWSON, BENONI. 1824. Died at Dawsonville, Montgomery County, Md., 1851. See Treasurer's MS. book and list of 1848.
- *DAWSON, JAMES. 1830. Born in Talbot County, Md., November 8, 1805; son of Major John Dawson. Educated at Easton Academy; M.D., University of Maryland, 1828; settled at St. Michael's, where he practiced successfully for more than fifty years. Died at St. Michael's about 1882. See Archives and lists of 1848 and 1853.
- *DAWSON, ROBERT MORRIS. 1811. Born in Maryland, 1791; brother of Dr. James Dawson. M.D., College of Medicine of Maryland, 1811 (?); moved to Missouri, 1812; Delegate to Territorial Legislature, 1815; Delegate to the State Convention, 1820; Member of the State Senate, 1822-36. Died in Missouri, 1843. See list of 1848.

Educated at Maryland Military Academy and Fort Edward Institute, New York; served in the Second Maryland Infantry, C. S. A.; pupil of Dr. W. G. G. Willson, of Easton; M.D., University of Maryland, 1869; practiced at Royal Oak for eight years; then removing to Bay Hundred, where he has continued to practice in connection with farming. P. O., Wittman, Talbot County, Md.
- DAY, BENJAMIN. 1823. M.D., University of Maryland, 1821; Censor of Prince George County, 1840. See lists of 1848 and 1853.
- DEAVER, JOHN T. 1808. Of Zanesville, O. See list of 1848.
- *DE BUTTS, ELISHA. Born near Dublin, Ireland, 1773. Emigrated to Maryland in his youth; M.D., University of Pennsylvania, 1805; practiced first at Alexandria; then moved to Baltimore; Professor of Chemistry, College of Medicine and the University of Mary-

JAMES SMITH

1771-1841.

MEDICAL AND CHIRURGICAL FACULTY

land, 1809-31; Dean, University of Maryland, 1816 and 1822-24; Orator, Medical and Chirurgical Faculty, 1818; Lectured before the Royal Institute, London, 1830; Professor of Chemistry, St. Mary's College, Baltimore. Died at Baltimore, April 3, 1831.

DEDIAS, EUREBE PEREIRA DE CAMASA. 1847. M.D. Of Lisbon, Portugal. See Treasurer's book and list of 1848.

DEETS, JAMES EDWARD. 1892. Born at Jarrettsville, Harford County, Md., December 13, 1856. Educated at Western Maryland College, Westminster, Md.; M.D., University of Maryland, 1882; Member of the House of Delegates, 1899; has practiced since 1882 at Clarksburg, Montgomery County, Md.

*DELANEY, JOHN. 1841. Born in Maryland. M.D., University of Maryland, 1823; about 1824 went with his brother Dennis from Baltimore to St. Mary's County, settling at Great Mills, the latter leaving in a few years and going to St. Louis. "Regarded generally as the ablest and most advanced doctor in Southern Maryland, and was a great student, taking several English and Scotch medical reviews. I heard him say in his latter years that his experience led him to believe that, as a rule, doctors killed as many patients as they cured from acting on the belief that drugs were omnipotent, when they should have made a rule of watching the progress of disease and aiding nature. He gave many strong points in support of this theory" (E. J. C.). He married Miss Eliza Coad in 1843, but left no issue. See list of 1848.

*DELOUGHERY, EDWARD. 1837. Born at Baltimore, 1806. Educated at St. Mary's and Georgetown Colleges; A.B., Georgetown College, 1826; pupil of Dr. A. Alexander; M.D., University of Maryland, 1829; began practice at Cincinnati, but soon returned to Baltimore; Member of the City Council, 1841. Died at Baltimore, November 18, 1885.

*DENNY, THEODORE. 1811. M.D., University of Pennsylvania, 1810; Delegate to American Medical Association from Baltimore City, 1847. Of the Eastern Shore of Maryland. See lists of 1848 and 1853.

*DENNY, WILLIAM. 1817. A.B., St. John's College, between 1811 and 1822; M.D.; Censor, 1819. Lived at Ellicott City, Md. Died about 1853. See list of 1848.

DENT, WALTER B. 1896. Born at Oakley, St. Mary's County, Md., February 26, 1859. Educated at St. John's Academy, Alexandria;

MEDICAL AND CHIRURGICAL FACULTY

Professor of Mathematics, Latin, and Military Tactics, St. John's Academy, 1878-80; Principal of St. Mary's High School, 1880-87; M.D., University of Maryland, 1889; Supervisor of Elections; practices at Oakley.

- *DENT, WILLIAM HATCH. 1809. Of Charles County, Md. See *Medical and Physical Recorder* and list of 1848.
- DERR, HAMILTON K. 1893. Born at Hagerstown, Md., November 1, 1852; son of John C. Derr. Educated at Lewistown Academy; M.D., University of Maryland, 1881; practiced seven years at Woodsboro, Frederick County, Md.; Physician to Cheyenne and Arapahoe Indians, Fort Reno, Indian Territory, 1887-88; located at Hagerstown, 1889; a Founder of Washington County Medical Society, and President, 1901-02; Vaccine Physician to Washington County; Assistant Surgeon to Western Maryland Railroad; resides at Hagerstown, Md.
- DEWESE, CORNELIUS SMITH. 1898. M.D., Jefferson, 1895; Assistant Physician, Maryland Hospital for the Insane (Spring Grove), Catonsville; Assistant Physician, Government Hospital for Insane, Washington, D. C., 1901—.
- DEWOLF, JAMES HENRY. 1887. Born at Philadelphia. Educated at Racine College, Wis.; M.D., Jefferson, 1878; took special course at Vienna in Eye, Ear and Throat Diseases, 1879-80; Eclectic Practitioner (Polk). 1600 West Franklin Street, Baltimore.
- DICKINSON, GRANVILLE E. 1890. Born at Mardella Springs, Wicomico County, Md., January 21, 1852. Educated at the University of Pennsylvania; M.D., University of Pennsylvania, 1874; practices at Upper Fairmount, Md.
- *DICKINSON, JAMES PHILIP. Born at Trappe, about 1801; son of John Dickinson, a farmer. M.D., University of Pennsylvania, 1825; located at Trappe, Talbot County, Md.; practiced there, and later applied himself exclusively to farming, until his death, 1841, of malarial fever. In list of 1848 marked dead.
- *DICKINSON, SAMUEL PHILEMON. 1826. Born at Trappe, Talbot County, Md., 1804; son of Gen. Samuel Dickinson. Was a cadet at West Point, but having ample means left the Army and studied medicine; pupil of Dr. S. T. Kemp; M.D., University of Maryland, 1826; practiced at Trappe until his death, April, 1862; Member of Constitutional Convention of 1851. See lists of 1848 and 1853.

MEDICAL AND CHIRURGICAL FACULTY

- *DICKINSON, SAMUEL S. Born near Trappe, Talbot County, Md., 1771 (Q.). M.D. Lived on his splendid plantation, "Crosiadore," near Trappe; never practiced. Died 1841 (Q.). In list of 1848 marked dead.
- *DICKSON, BENJAMIN. 1821. Born in Maryland. Pupil of Jameson; M.D., University of Maryland, 1820; Censor for Baltimore, 1822; moved to Steubenville, Jefferson County, O. See list of 1848.
- *DICKSON, ISAAC N. 1870. Born at Reisterstown, Baltimore County, Md., 1817; son of Major Isaac N. Dickson. Educated at Franklin Academy, Reisterstown; M.D., University of Maryland, 1838; practiced with Dr. Absalom Thompson at Bay Hundred, Talbot County, succeeding Dr. Thompson in 1840; removed to Reisterstown in 1853, continuing his brother's practice until 1894, when he retired. Died at Reisterstown, 1896.
- DICKSON, JOHN. 1853. Born in England. M.D., University of Maryland, 1852; Physician to Marine Hospital, 1853-58; Vaccine Physician, 1863-67; President, Baltimore Medical Association, 1875-76; Physician to Union Protestant Infirmary, 1882; resides abroad. Address, London, England.
- *DICKSON, LOUIS L. 1829. Born at Reisterstown, Baltimore County, Md., 1807; son of Major Isaac N. Dickson. Educated at Franklin Academy, Reisterstown; M.D., University of Maryland, 1824. Died at Reisterstown, 1853. See lists of 1848 and 1853.
- *DIFFENDERFFER, HENRY. 1828. Born at Baltimore, 1804. M.D., University of Maryland, 1827. Died at Baltimore, March 22, 1832. See list of 1848.
- *DIFFENDERFFER, MICHAEL. 1817. Born in Maryland (?), 1789. M.D., University of Pennsylvania, 1814; settled at Baltimore, 1814; Surgeon's Mate, First Regiment of Artillery of Maryland Militia, 1814; Surgeon, Artillery Company, Baltimore, 1816; Consulting Physician, Eastern Dispensary, 1838; Vice-President, Medical and Chirurgical Faculty, 1855-56. *DONALDSON, WILLIAM. 1804. Born in Calvert County, Md., 1778. A.B., St. John's College, Annapolis, 1798; pupil of Dr. Miles Littlejohn; attended medical lectures at the University of Pennsylvania,

MEDICAL AND CHIRURGICAL FACULTY

- 1802-03; Founder of the College of Medicine of Maryland, 1807, and Charter Professor of the Institutes of Medicine; resigned on account of health, 1808; M.D. (Honorary), University of Maryland, 1818; associated in practice with Dr. Miles Littlejohn, and later (1830) with Dr. R. S. Stuart; President, Medical Society of Baltimore, 1822-23. Died January 14, 1835.
- DORAN, PETER JOSEPH. 1894. Born at Dublin, Ireland, 1844; son of John Doran. A.B., Dublin College; M.D., Baltimore University, 1891; Teacher. 14 North Gay Street, Baltimore.
- *DORSEY, ARCHIBALD. 1801 (?). Of Bel Air, Harford County, Md. Married three or four times, but all his children are now dead. See lists of 1807 and 1848; marked dead in the latter. (An Archibald Dorsey made his will September 10, 1843, stating that he contemplated a trip to Kentucky. The will was probated June 29, 1847.)
- DORSEY, EDWIN. 1825. M.D., University of Maryland, 1825. Of Baltimore; later, moved elsewhere. See lists of 1848 and 1853.
- *DORSEY, FREDERICK. 1801 (?). Born in Anne Arundel County, Md., 1774. Pupil of Dr. Rush; M.D. (Honorary), University of Maryland, 1824; attended 11,000 obstetrical cases; Vice-President, Medical and Chirurgical Faculty, 1857-58; practiced nearly seventy years; at his death associated in practice with his son and grandson; tied the middle meningeal artery. Died in Washington County, Md., October 26, 1858 (Trans., American Medical Association, 1860).
- DORSEY, JOHN W. 1808. Born in 1750 (Q.). Assistant Surgeon, U. S. N., July 16, 1803; resigned, July 9, 1807. Of Liberty, Frederick County, Md. Died in 1823 (Q.). See *Medical and Physical Recorder* and lists of 1848 and 1853.
- *DORSEY, LLOYD. 1829. M.D., University of Maryland, 1821. Of Frederick County, Md. Died at Frederick, Md., 1857. See Trans., 1857, p. 17, and lists of 1848 and 1853.
- DORSEY, REUBEN M. 1892. Born in Howard County, Md., February 22, 1869. Educated at Maupin's School, Ellicott City; pupil of Dr. William E. Hodges; M.D., University of Maryland, 1891; Resident, "Matley Hill Sanitarium;" Surgeon, Baltimore and Ohio Railroad, for two years; Medical Examiner, Baltimore and Ohio Railroad. 711 Third Avenue, Baltimore.

MEDICAL AND CHIRURGICAL FACULTY

- *DORSEY, RICHARD. 1824. M.D., University of Maryland, 1824; Censor, 1840. Of Frederick City, Md. See lists of 1848 and 1853.
- *DORSEY, ROBERT EDWARD. Born at Georgetown, D. C., 1796. M.D., University of Maryland, 1819; Resident Physician, City Hospital, Baltimore, 1819-20; Professor of Materia Medica, University of Maryland (Trustees' School), 1837-39; President of the Alumni Association, University of Maryland (School of Medicine), 1875; resided in Anne Arundel County. He was "too frail for general practice." Died in 1876.
- *DORSEY, SEPTIMUS. 1847. Born at "Happy Retreat," Howard County, Md., January 7, 1819; son of Col. Richard Dorsey. Educated at Brookville Academy, Montgomery County, Md.; M.D., Washington Medical College, Baltimore, 1839; moved from Howard County to Mount Vernon, near Baltimore, 1842 or 1843; from there removed to Washingtonville (now Mount Washington), where he spent the remainder of his life. Died at "Mount Radnor," of apoplexy, March 6, 1850. See list of 1848.
- *DORSEY, WILLIAM H. 1810. M.D., College of Medicine of Maryland, 1810 (?). Of Montgomery County, Md. See lists of 1848, 1853 and 1873.
- *DOUGHERTY, BERNARD A. Born at York, Pa., September, 1825. Educated at the Athenæum, Cincinnati, and St. John's College, Louisville; pupil of Dr. D. A. O'Donnell and Dr. McGuire; M.D., University of Maryland, 1847; began practice at Cumberland, Md. Died at New York City, April 1, 1875.
- DOUGLASS, EUGENE. 1896. Born at Preston, Md., 1860. Educated at Preston Academy; Ph.G., Maryland College of Pharmacy, 1888; M.D., University of Maryland, 1889; practiced at Oxford, Md., but now resides at Baltimore. 830 West North Avenue, Baltimore.
- *DOVE, GEORGE McCAULEY. 1841. Born at Washington, D. C., October 5, 1817. Pupil of Dr. Kearney, U. S. N.; M.D., University of Pennsylvania, 1839; Surgeon, Baltimore Battalion in the Mexican War, 1846; settled at Washington, D. C., 1848-49; Physician to Washington Almshouse; Attending Physician, Providence Hospital; President and Secretary, Board of Health of the District of Columbia; Professor of the Practice of Medicine, National Medical College. Died at Washington, January 30, 1874.

MEDICAL AND CHIRURGICAL FACULTY

- Downs, Dionysius. 1853. M.D.; Vaccine Physician, Baltimore, 1851-54. Annual Member. See list of 1853. Full Member. Trans., 1858.
- *Downs, P. C. Of Church Hill, Queen Anne's County, Md. See lists of 1848 and 1853. Dr. Cooper Downs was licensed 1807 (Quinan).
- Downes, Clarence E. 1892. Born at Bridgetown, Queen Anne's County, Md., April 18, 1866. Ph.G., Philadelphia College of Pharmacy, 1886; M.D., Jefferson Medical College, 1888. 735 West North Avenue, Baltimore.
- *Downes, Jesse. *Founder*. 1799. Of Caroline County, Md.
- *Downes, William H., Jr. Born in Queen Anne's County, Md., August 29, 1841. Educated at Dickinson College; M.D., University of Maryland, 1864; practiced at Denton, Md.; Attending Physician, Caroline County Almshouse. Died at Denton, Md., January 1, 1891.
- Downey, Jesse Wright. 1883. Born near Newmarket, Frederick County, Md. Educated at Rock Hill College; M.D., University of Maryland, 1869; Vice-President, Medical and Chirurgical Faculty of Maryland, 1892-93; Assistant Surgeon, First Regiment, M. N. G., 1893-98; practices at Newmarket.
- *Doyle, H. G. 1829. M.D., Transylvania University, Ky., 1822. Of Hagerstown, Md. See lists of 1848 and 1853.
- *Draper, A. C. 1826. Of the Eastern Shore of Maryland, later of Philadelphia. See list of 1848.
- *Drought, Albert M. 1888. Born at Baltimore, May 17, 1866. Ph.G., Maryland College of Pharmacy, 1885; M.D., University of Maryland, 1888. Died at Baltimore, by drowning, July 17, 1890.
- *DuBarry, Edmund Lewis. M.D., University of Pennsylvania, 1822; Surgeon's Mate, U. S. N., January 30, 1823; Surgeon, May 24, 1826; he was the author of "The United States: Its Power and Progress," translated from the French of Guillaume Tell Poassin, 8vo, Philadelphia. Died, July 12, 1853. See list of 1848.
- *Ducachet, Henry William. Born at Charleston, S. C., 1796. M.D., (New York), 1817; settled at Baltimore; Censor, 1818-26; moved

MEDICAL AND CHIRURGICAL FACULTY

to New York, entering the ministry of the P. E. Church; he was the author of "Prognostics and Crises of Hippocrates," translated with notes, 16mo, New York, 1819. Died at Philadelphia, December 13, 1865.

*DUCATEL, JULES TIMOLEON. Born at Baltimore, June 6, 1796; son of Edme Ducatel, a pharmacist. Educated at St. Mary's College, Baltimore, and (1818-22) at Paris; Professor of Natural Philosophy, Mechanics' Institute, Baltimore, 1824; Professor of Chemistry and Geology, Faculty of Arts and Sciences, University of Maryland; Professor of Chemistry, School of Medicine, University of Maryland, 1831-37; State Geologist, 1833-41; Professor of Chemistry, Mineralogy and Geology, St. John's College, Annapolis; on expedition of exploration to the Upper Mississippi and Lake Superior, 1843-46; Founder of the Maryland Academy of Science and Literature; President, Maryland Academy of Science and Literature, 1821-37; author of "A Manual of Practical Toxicology," 12mo, Baltimore, 1832 (burned); second edition, 1833; Editor of *Baltimore Times*, 1830-31. Died at Baltimore, April 23, 1849.

*DUCKETT, RICHARD I. *Founder*. 1799. Died at Queen Anne, Prince George County, Md., November, 1801.

*DUCKETT, THOMAS BUCHANAN. 1824. Born 1800. M.D., University of Maryland, 1824. Died in Washington County, Md., December 27, 1875, aged 75. See list of 1848 and Scharf's "Western Maryland."

DUDLEY, SAMUEL C. 1899. Born near Sudlersville, Queen Anne's County, Md., June 17, 1843. M.D., University of Maryland, 1867; Clerk of Circuit Court, Queen Anne's County, 1881-87; resides at Church Hill, Md. Name not in Polk.

DUER, ROBERT. 1814. M.D., University of Pennsylvania, 1814. Of Maryland. See list of 1848.

*DUHAMEL, WILLIAM JAMES CHAMBERLIN. About 1872. Born in Maryland, January 18, 1827. Educated at St. Mary's College, Baltimore; M.D., University of Maryland, 1849; practiced at Washington, D. C., 1849-69; then removed to Baltimore but returned to Washington later; Physician to Washington jail; Acting Assistant Surgeon, U. S. A. Died at Washington, August 15, 1883.

*DUKE, JAMES. 1821. M.D., University of Maryland, 1820. Of Calvert County, Md. See lists of 1848 and 1853.

MEDICAL AND CHIRURGICAL FACULTY

- *DULIN, ALEXANDER FRANKLIN. 1831. Born in Fairfax County, Va., May 7, 1806. M.D., University of Pennsylvania, 1830; Resident Physician, Baltimore Almshouse, 1830-35; then began practice in the city; after several years spent in Europe, he died at Baltimore, November 25, 1874. See lists of 1848, 1853 and 1873.
- *DULIN, ALEXANDER FRANKLIN. 1879. Born at Baltimore, October 5, 1856. Educated in Europe and at the University of Virginia; M.D., University of Maryland, 1878; studied in Europe; Vaccine Physician. Died at Baltimore, December 19, 1891.
- *DUNAN, ADOLPHUS. 1828. M.D., University of Maryland, 1827; Censor, 1831. Of Baltimore. See list of 1848.
- *DUNAN, A. J. 1801 (?). Of Baltimore. See lists of 1807 and 1848; marked dead in the latter.
- *DUNBAR, JOHN RICHARD WOODCOCK. 1836. Born at Winchester, Va., 1805. A.M., Dickinson College; pupil of Dr. John Bell, of Philadelphia; M.D., University of Pennsylvania, 1828; Resident Physician, Pennsylvania Hospital; practiced at Winchester several years; removed to Baltimore, 1830; Founder of Baltimore Medical Institute; Professor of Surgery, Washington University, 1837-42; Senior Grand Warden, Grand Lodge of Masons, 1845; Vice-President, Medical and Chirurgical Faculty, 1859-70; President, Medical and Chirurgical Faculty, 1870; he was the author of "Essay on the Nervous System," 8vo, Philadelphia, 1828; Co-Editor, *Maryland Medical and Surgical Journal*, 1839-43. Died at Baltimore, July 3, 1871.
- *DUNBAR, ROBERT MACKEY. 1831. Born at Winchester, Va., September 25, 1808; a brother of J. R. W. Dunbar. M.D., University of Pennsylvania, 1830; connected with an Infirmary at Baltimore. Died at Winchester (of consumption), November 27, 1831. See list of 1848.
- DUNCAN, A. University of Pennsylvania, 1823 (?). Of Baltimore. See Trans., 1831 (*American Journal of the Medical Sciences*).
- *DUNGLISON, ROBLEY. 1833. Born at Keswick, Cumberland County, England, January 4, 1798. Studied medicine at the Universities of Edinburgh and Paris; Licentiate Royal College of Surgeons and Society of Apothecaries, London, 1819; commenced practice at London, 1819; M.D., University of Erlangen, 1824; Physician-

MEDICAL AND CHIRURGICAL FACULTY

Accoucher, Eastern Dispensary, London, 1824; Founder of the School of Medicine, University of Virginia, 1824; M.D. (Honorary), Yale, 1825; Professor of Anatomy, Physiology, Materia Medica, Pharmacy and Histology, School of Medicine, University of Virginia, 1824-33; Chairman of the Faculty, University of Virginia; Professor of Materia Medica, Hygiene and Medical Jurisprudence, University of Maryland, 1833-36; Dean, University of Maryland, 1834-35; Professor of Institutes of Medicine, Jefferson Medical College, Philadelphia, 1836-68; Emeritus Professor, 1868-69; Dean, Jefferson Medical College; LL.D., Jefferson College, Canonsburg, Pa., 1852; Vice-President, American Philosophical Society, 1853-56 and 1858-59; author of a "Medical Dictionary," first edition, 2 vols., Boston, 1833 (21st edition by his son); "An Ancient Geography," 1825; "Medical Formulæ," 1839 (seventh edition, 8vo, 1856); "Medical Student," 1837 (second edition, 1844); "Practice," 2 vols., 8vo, 1842 (third edition, 1848); "Dictionary for the Blind," 3 vols., fol.; "Roget's Physiology;" "Hooper's Surgical Vade Mecum;" "Forbes' Cyclopædia of Practical Medicine," 4 vols., 8vo, Philadelphia, 1848; "General Therapeutics and Materia Medica," 2 vols., Philadelphia, 1836 (six editions); "Elements of Hygiene," 8vo, Philadelphia, 1835; "Human Physiology," 2 vols., 8vo, Philadelphia, 1832 (eighth edition, 1856); "Commentaries on Diseases of the Stomach and Bowels in Children;" "Larrey's Memoir on the Moxa;" "Magendie's Formulary of New Remedies" (seven editions); "Traill's Medical Jurisprudence;" "Introduction to the study of Greek and Roman Geography," with Professor Long; "The Insane Poor," 8vo, Philadelphia, 1839; Editor of *American Medical Library and Intelligencer* (monthly), 1837-42; *Virginia Literary Museum and Journal of Belles-Lettres*, etc. "A beacon light to the world of medical literature, and one of the foremost writers and teachers of his day" (Gross). Died at Philadelphia, October 1, 1869.

McSherry and Van Bibber; M.D., University of Maryland, 1865; Vice-President, Clinical Society; practiced in Dorchester County, 1865-69; at Ellicott City, 1869-89; since 1889, at Baltimore; President and Medical Examiner, Maryland Catholic Benevolent Union. 914 North Fulton Avenue, Baltimore.

MEDICAL AND CHIRURGICAL FACULTY

*KEENE, WILLIAM BILLINGSLEA. *Founder.* 1799. Born in Dorchester County, Md., March 15, 1775; of English descent; son of Thomas B. and Mary Tubman Keene. Said to have taken medical degree at the University of Pennsylvania; Orator, Medical and Chirurgical Faculty, 1809; for several years after graduation, practiced at Greensboro, Md.; later, went to Baltimore, where he married, and afterwards moved to Kentucky; was very wealthy; lived at Georgetown, Scott County, Ky.; he was twice married, first, Elizabeth Claland, second, Hannah Bodine. Died in Louisiana, April 9, 1857. See lists of 1807, 1848 and 1853.

*KEENER, WILLIAM H. 1877. Born at Baltimore, November 31, 1822; son of David Keener. Educated at Baltimore College; student of Dr. A. F. Dulin; M.D., University of Maryland, 1845; engaged extensively in assaying of ores; spent last ten years of his life mostly abroad, pursuing literature and art. Died at Baltimore, May 21, 1880.

*KEERL, HENRY. Born at Mainbernheim, Bavaria, 1755. Came to America in 1776 as Surgeon of one of the Hessian Regiments in the British Service; captured at Trenton, N. J., December 26, 1776; paroled and allowed to live at Baltimore, where he settled in practice (1782) and lived until his death, July 16, 1827. He left a large estate. He is spoken of as a conscientious and benevolent gentleman, who enjoyed the entire esteem of the community.

KEFAUVER, ELMER C. 1897. Born at Middletown, Frederick County, Md., March 18, 1868. M.D., University of Maryland, 1891. Of Thurmont, Frederick County, Md.

*KEIDEL, GEORGE. 1857. Born at Hildesheim, Hanover, Germany, February 7, 1799. M.D., University of Bonn, 1828; after a year in Brazil, began practice at Salzgittin; came to Baltimore, 1853. Died at Catonsville, Md., November 13, 1874. See Trans., 1858 and 1873.

KEIDLER, —. 1857. See Treasurer's book.

KEIRLE, NATHANIEL GARLAND. 1887. Born at Baltimore, October 10, 1833. A.B., Dickinson College, 1855, and later A.M.; student of Dr. Miltenberger; M.D., University of Maryland, 1858; resident student, Almshouse; Resident Physician, Baltimore Infirmary, 1864-65; Resident Physician, Bayview Asylum; Attending Phy-

MEDICAL AND CHIRURGICAL FACULTY

sician, Skin Department of Baltimore Special Dispensary; Physician in Charge of the Dispensary of the College of Physicians and Surgeons for twelve years; President, Clinical Society of Maryland, 1887-88; Demonstrator of Pathology, and later Professor of Pathology and Medical Jurisprudence, College of Physicians and Surgeons, Baltimore; Director of the Pasteur Department, City Hospital, 1897—; Medical Examiner for Baltimore City, 1887—; author of article on Rabies, "Twentieth Century Practice of Medicine." 1419 West Lexington Street, Baltimore. (Up to June, 1902, 322 cases had been admitted to the Pasteur Department of the City Hospital, under charge of Dr. Keirle, of whom 209 were bitten by animals absolutely proven to have been mad. There was only one death from rabies. This case, owing to the incomplete period of immunization, would not be accepted as a failure by any antirabic institution. Even if cognizance is taken of this case, the percentage of losses is only one-third of one per cent., a smaller rate than that shown in the last report of the Pasteur Institute at Paris.—From Dr. Keirle's Report.)

*KEIRN, GARRET. 1819. M.D., University of Maryland, 1819. Of Queen Anne County, Md.

KELLER, CHARLES J. 1899. Born at Baltimore, 1875. Educated at Marston's University School; M.D., University of Maryland, 1898; Chief of Clinic, Practice of Medicine, University Dispensary. 222 West Monument Street, Baltimore.

MEDICAL AND CHIRURGICAL FACULTY

- *OWINGS, JOHN H. 1828. Born at Baltimore. M.D., Washington Medical College, Baltimore, 1828; Censor, 1840; for forty years a leading practitioner of Howard County. See lists of 1848 and 1853.
- *OWINGS, ORELLANA H. 1830. M.D., University of Maryland, 1829. Of Anne Arundel County, Md. See lists of 1848, 1853 and 1873.
- *OWINGS, SAMUEL B. 1821. M.D., University of Maryland, 1823. Of Baltimore County, Md. See lists of 1848 and 1853.
- *OWINGS, THOMAS. 1826. Born at Baltimore, December 11, 1802. M.D., University of Maryland, 1825; began practice at Baltimore with Dr. S. K. Jennings. Died at Baltimore, December 18, 1866.
- OWINGS, THOMAS BOYLE. 1853. Born in Howard County, Md., September 23, 1830; son of J. H. Owings. Educated at Hallowell's School, Alexandria, Va.; M.D., University of Maryland, 1852; settled for practice at Ellicott City; Attending Physician, St. Charles College, 1861—; Physician to Christian Brothers, 1860—; Physician to Redemptorist College, Mount St. Clement, 1869—; Health Officer, Howard County, 1891—; resides at Ellicott City, Md.
- *PAGE, HENRY. 1801 (?). Born at Swan Creek, Kent County, 1770; second son of John Page. Educated at Washington College, Chestertown; student of Dr. Edward Worrell, with whom he lived; after attending the usual course of lectures at the University of Pennsylvania, he began practice, 1792, on a farm near Swan Creek, and soon had a large practice. He was fond of theorizing during consultation and ever ready to give a reason for his faith. Neglecting dress, he was considered eccentric. Mentally he was a giant, and, socially, a model for all. He had a remarkable head, and all who saw him felt his power. He died away from home, 1820 (Wroth, Trans., 1873).
- PAGE, HENRY, JR. 1897. Born at Princess Anne, Somerset County, Md., September 1, 1870; son of Judge Henry Page. A.B. and A.M., Princeton; M.D., University of Pennsylvania, 1894; Assistant Surgeon, U. S. A. (Manila); Surgeon, U. S. A., Fort Monroe, Va. (Polk, 1902).
- *PAGE, JAMES. 1808 (?). Born in Kent County, Md. M.D., University of Pennsylvania, 1808; Attending Physician, Baltimore General Dispensary, 1809-10; partner with Dr. Coulter, 1808-16; Sur-

MEDICAL AND CHIRURGICAL FACULTY

geon's Mate, U. S. N., 1811; Surgeon, 1816; attended in yellow fever epidemic at Baltimore, 1819-20; Surgeon, U. S. N., April 23, 1827. Died March 15, 1832 (Hammersley). See list of 1848.

PAGE, ISHAM RANDOLPH. 1890. Born at Richmond, Va., June 3, 1834. Attended medical lectures at the University of Virginia, 1857-58; M.D., University of New York, 1859; Interne, Bellevue and Charity Hospitals, 1859-61; Surgeon and Medical Director of Artillery, Army of Northern Virginia, C. S. A., 1861-64; on hospital duty at Richmond, 1864-65; practiced at Richmond, 1865-71, and since then at Baltimore; Vaccine Physician, 1873-76 and 1878-80; Professor of Surgery, Washington University, Baltimore. 1206 Linden Avenue, Baltimore.

*PAGE, JOHN RANDOLPH. Born in Gloucester County, Va., May 10, 1830. Educated at the University of Virginia; M.D., University of Virginia, 1850; studied in Hospitals of Paris and London, 1850-52; practiced in Gloucester County, Va., 1852-61; Surgeon, C. S. A., 1861-65; Surgeon and Professor, State Military Academy, Alexandria, La., 1862-68; Professor of the Practice of Medicine, Washington University, Baltimore, 1868-72; Professor of Agricultural Chemistry and Scientific Farming in the University of Virginia, 1872-87; resigned in 1887 and became Surgeon to Georgia Pacific Railroad, Sloss Iron and Steel Company and Georgia Central Railroad, Birmingham, Ala.; retired on account of ill health in 1897, and thenceforth resided at the University of Virginia; Licentiate Teacher in the Medical Department, University of Virginia. Died there March 11, 1901.

PAGE, ROBERT STEVENS. 1899. Born at Baltimore, October 23, 1875; son of Dr. I. R. Page. Educated at City College and Johns Hopkins University; M.D., University of Maryland, 1898; Resident Gynecologist, University Hospital, 1898-99; practiced at Baltimore till 1900, and now practices at Bel Air, Md.

*PAGETT, DAVID T. (DAVID DAVIS.) 1814. Originally from Prince George County, Md.; moved to Cecil County when a boy, his name then being David Pagett. By Act of Legislature, this was changed, about the time of his marriage to Emeline L. Wickes, 1823, to David Davis. Died at Galena, Kent County, Md., then Georgetown Cross Roads. On his tomb is this inscription: "Sacred to the memory of David Davis, M.D., who departed this life in the faith and fear of God on the 25th day of January, 1844, in the fifty-seventh year of his age. He lived a faithful member of the

MEDICAL AND CHIRURGICAL FACULTY

Holy Catholic Church and died anticipating the joys of Paradise." See list of 1848. (Possibly M.D., College of Medicine of Maryland, 1810 or 1811.) (See Davis, David; the records conflict.)

- PALMER, ROBERT VICKERY. 1899. Graduate of Charlotte Hall Military Academy, 1890; M.D., University of Maryland, 1895; practices at River Springs, St. Mary's County, Md.
- *PALMER, WILLIAM P. 1819. Born at Concord, Pa., November 19, 1792. Pupil of Drs. Chapman and Rush; M.D., University of Pennsylvania, 1815; settled at Brookeville, Montgomery County, Md., and practiced in partnership with Dr. Henry Howard (later a member of the Faculty of the University of Maryland); removed to "Woodlawn," near Sandy Spring, Montgomery County, where he resided until his death; in active practice for fifty-three years; Censor, Montgomery County, 1840. Died December 27, 1869. See lists of 1848, 1853 and 1873.
- *PAPE, GEORGE EDWARD. 1858. Born at Hanover, Germany. M.D., University of Göttingen, 1833; passed Staats-examen in Germany; emigrated to Baltimore, 1856; a Founder and the first President, German Medical Society, 1871-72; returned to Hanover about 1887, and died there in 1900. See Trans., 1858 and 1873.
- *PAPE, GEORGE W. 1874. Born at Hanover, Germany, 1848; son of Dr. G. E. Pape. Came to America in 1856; Ph.G., Maryland College of Pharmacy, 1868; M.D., University of Maryland, 1871; Assistant Physician, Maryland Eye and Ear Infirmary, 1871-72; spent two years studying in Germany. Died at Baltimore, January 8, 1882 (from suicide).
- *PARKER, CALEB. 1816. Born at Washington, D. C.; brother of Drs. Fielder and Charles Parker; M.D.; moved to Cecil County early in the century; Surgeon, Thirty-sixth Infantry, 1815; after the War of 1812, settled in Cecil County, in partnership with his brother Charles; Censor, Cecil County, 1826; was thrown from his carriage and permanently disabled. Died at Elkton about 1850. In list of 1848 marked dead.
- PARKER, CHARLES S. 1881. Born at Baltimore, 1857. M.D., College of Physicians and Surgeons, Baltimore, 1881; Professor of Physiology and Hygiene, Baltimore University, 1887-88. 3120 West North Avenue, Baltimore.

MEDICAL AND CHIRURGICAL FACULTY

- *PARKER, JOHN C. 1833. Pupil of Dr. Stephen B. White; M.D. (probably Washington University); had smallpox here while dissecting; Member of the House of Delegates (three terms); twice State Senator; Judge of Orphans' Court; a very wealthy man. Of Calvert County, Md. See lists of 1848, 1853 and 1873.
- *PARNHAM, JOHN. *Founder*. 1799. Born near Newport, Charles County, Md. His parents came from England early in the eighteenth century. M.D., University of Edinburgh, 1772 (Thesis, "De Cystirrhœa"); on Committee of Observation; Member of the State Constitutional Convention, 1776; Chief Surgeon, Smallwood's Brigade, during the Revolution; Judge of Charles County Court, 1777; Presidential Elector, 1805; Member of the Maryland Legislature, 1787-89, 1795-99, 1808-09; married Nancy Dent, daughter of George Dent (Member of Congress), of "Prospect Hill;" they had six children, all of whom died without issue; after the Revolution he returned to his home, "Parnham Hall," and there practiced until his death, at the age of about 65; buried in the family graveyard on his place.
- *PARRAN, RICHARD. 1831. Born in Calvert County, Md., January, 1811; son of Richard Parran. Pupil of Dr. William D. Macgill, of Hagerstown; M.D., University of Maryland, 1830; health failed and he went to California in 1849, returning unrelieved in 1851. Died at Shepherdstown, Va., February 1, 1851. See list of 1848.
- *PARRAN, THOMAS. *Founder*. 1799. Of Lower Marlboro, Calvert County, Md. (The family came from Scotland and settled at St. Leonard's.) Died in 1810 (Q.).
- *PARRAN, THOMAS. 1818. M.D., University of Maryland, 1817. Of St. Leonard's, Calvert County, Md. Died in Calvert County about 1877. See lists of 1848 and 1853.
- *PARRISH, JOSEPH. 1874. Born at Philadelphia, November 11, 1818; son of Dr. Joseph Parrish. Educated at Burlington, N. J.; M.D., University of Pennsylvania, 1844; Professor of Obstetrics, Philadelphia Medical College, 1855; in Europe, 1856-57; in charge of the Pennsylvania Training School for Feeble-minded Children, 1857-61; Sanitary Inspector, 1861-65; in charge of the Pennsylvania Sanitarium for the Treatment of Alcoholic and Opium Inebriety, 1865-72; Originator of the American Association for the Cure of Inebriates, and President, 1870-74; Superintendent, Maryland Inebriate Asylum, Baltimore, 1874; settled at Burlington, N. J., 1875; President of

MEDICAL AND CHIRURGICAL FACULTY

the Delaware County Medical Society for three years; Vice-President, State Medical Society of Pennsylvania; Editor, *New Jersey Medical and Surgical Reporter*, 1848, *The Sanitary Commission Bulletin*, *Transactions of the Association for the Cure of Inebriates*, and *Quarterly Journal of Inebriety*. Last entry in Polk's Directory, 1890.

PATON, STEWART. 1897. Born at New York, 1865. A.B., Princeton, 1886; A.M., 1889; M.D., College of Physicians and Surgeons, New York, 1889; Visiting Physician, Bayview Asylum; Assistant in Neurology, Johns Hopkins Dispensary; Associate in Psychiatry, Johns Hopkins University; Director of Laboratory, Sheppard and Enoch Pratt Hospital. 213 West Monument Street, Baltimore.

PATTERSON, FRANCIS W. 1877. Born at Saulsbury, Conn., February 4, 1835; removed to Lorain County, Northern Ohio, 1837. Educated at Elyria High School, 1848-52; later, at Ohio Wesleyan University, Delaware, O.; pupil in Medicine of his uncle (Dr. R. J. Patterson, Columbus, O.); attended Starling Medical College for two years; third course at the Medical College of Ohio, Cincinnati, where he took M.D., 1859; began practice at Elyria, O.; Assistant Physician, Mississippi State Lunatic Asylum, Jackson, Miss., 1859; Private, C. *STEVENS, ROBERT. 1801 (?). Of Denton, Caroline County, Md. See lists of 1807 and 1848; marked dead in the latter.

*STEVENSON, COSMO GORDON. 1801 (?). Born in 1785. M.D., University of Pennsylvania, 1803; Surgeon's Mate, Twenty-seventh Regiment, State Militia, 1810; Member of City Council, 1825. An eminent physician and preceptor of Drs. John Buckler and Monkur. Died at Baltimore without issue, 1825. See lists of 1807 and 1848.

MEDICAL AND CHIRURGICAL FACULTY

STEVENSON, H. BURTON. 1897. Born at Baltimore, December 24, 1869; son of Dr. John M. Stevenson and grandson of Dr. James S. Stevenson. M.D., University of Maryland, 1892; Chief of Gynæcological Clinic, Woman's Medical College; President, Baltimore County Medical Association; Ex-Health Officer of Baltimore County; Demonstrator of Obstetrics at Baltimore Medical College. Of Rider P. O., Baltimore County, Md.

*STEVENSON, HENRY. *Founder.* 1799. Born at Londonderry, Ireland, 1721. Educated at Oxford, England; the exact year of his coming to Baltimore is not known; his brother John, also a physician, came to Baltimore in or about 1745, but whether Henry accompanied him or came later is not certain; in 1756 he erected a stone mansion house, "Parnassus," just north of the site of the present city jail; here he maintained, at his own expense, an inoculating hospital, 1765-76, and after the Revolution, 1786-1800; on the outbreak of the Revolution, he espoused the royal cause and left Baltimore on the Declaration of Independence; Surgeon in the British Navy, 1776-86; returned to Baltimore, 1786, and continued to practice here until his death. Died at Baltimore, March 31, 1814.

*STEVENSON, JAMES S. 1843. Born in Kentucky, 1815. M.D., University of Maryland, 1841; settled at Baltimore, 1842; Vaccine Physician, 1853. Died at Baltimore, August 2, 1882. See lists of 1848, 1853 and 1873.

*STEVENSON, JOHN M. 1877. Born at Baltimore, 1842. M.D., University of Maryland, 1862; Surgeon, Third Infantry and Third Cavalry, U. S. A., 1861-65; wounded at Gettysburg. Died at Baltimore, March 6, 1879.

STEVENSON, S. Of Baltimore. See Trans., 1856.

STEWART, ALEXANDER. 1831. M.D. Of Frederick County, Md. See lists of 1848 and 1853. (Hammersley has this: "Stewart, Alexander, born —; appointed from Maryland Major, Twenty-sixth Infantry, March 25, 1813; transferred to the Fifth Infantry, October —, 1814; disbanded, June 15, 1815; Second Lieutenant, Corps of Artillery, December 4, 1819; transferred to Third Artillery, June 1, 1821; resigned, June 1, 1822.")

*STEWART, DAVID. 1844. Born at Port Penn, Del., February 14, 1813; son of Dr. David Stewart. Educated at Newcastle Academy, Del.;

MEDICAL AND CHIRURGICAL FACULTY

settled at Baltimore, about 1831; Member of Baltimore City Council, 1835-37; School Commissioner of Baltimore, 1836; Inspector of Drugs for Port of Baltimore; Ruling Elder, First Presbyterian Church, Baltimore, 1838; Member of the State Senate, 1840; M.D., University of Maryland, 1844; a Founder and Lecturer, Maryland Medical Institute, 1847; Chemist to State Agricultural Society; Professor of Chemistry and Natural Philosophy, and Vice-President, St. John's College, Annapolis, 1855-62; a Founder of the Maryland College of Pharmacy, 1840; Lecturer on Pharmacy, University of Maryland, 1844-47; removed to Port Penn, Newcastle County, Del., 1862, where he died September 2, 1899. "Of the olden school; stern yet gentle as a woman and courteous as a Chesterfield; a brilliant conversationalist with whom no one ever conversed without profit and his tongue was always clean." It was on his motion that the Medical and Chirurgical Faculty imported the first glycerine used in Maryland and distributed it gratuitously among its members; also that this Society was the first in America (June 8, 1855,) to propose the substitution of the decimal weights and measures for those then in use. See *Journal and Trans., Maryland College of Pharmacy*, 1860.

*STEWART, JAMES. 1811. M.D., University of Pennsylvania, 1811. Of Princess Anne, Somerset County, Md. In list of 1848 marked dead.

STIER, JAY HUGH. 1894. M.D., University of Maryland, 1886. Of Perryman's, Md.

*STINNECKE, HENRY A. 1822. Only son of Charles F. Stinnecke, M.D., Jena, Germany, who moved to Baltimore from Carlisle, Pa., 1799, and died of yellow fever, July, 1800 (see Baltimore newspaper). Said to have graduated in medicine and received an appointment in the United States Army as Assistant Surgeon, 1842. Died at Baltimore, December 21, 1855. See list of 1848. (The widow of the elder Stinnecke married Dr. George A. Dunkel, of Baltimore.)

STIRLING, WILLIAM MILLARD. 1897. Educated at Stewartstown (Pa.) Institute; attended University of Maryland, 1891-94; M.D., Baltimore Medical College, 1895. Of Shane, Baltimore County, Md.

*STOCKETT, JOHN SHAAFF. 1811. Born in Anne Arundel County, Md., November 27, 1788. Educated at St. John's College; pupil of Dr. J. T. Shaaff, Annapolis; later, of Dr. B. Rush (but for this last,

MEDICAL AND CHIRURGICAL FACULTY

would say he might have been among the ten M.D.'s at the College of Medicine of Maryland, 1811); practiced at Baltimore; later, in Anne Arundel County, Md.; said to have been a physician of great skill and large practice. Died in Anne Arundel County, Md., May 7, 1825. No issue.

*STOCKETT, RICHARD GALEN. 1801 (?). Born in Anne Arundel County, Md., February 7, 1776. Educated at St. John's College; pupil of Dr. Rush; at the University of Pennsylvania, 1797-98; settled in Anne Arundel County, Md.; Surgeon in the War of 1812, at Baltimore; M.D. (Honorary), University of Maryland, 1826; gradually gave up practice for agriculture. Died in Howard County, Md., February 27, 1861.

*STOCKETT, THOMAS NOBLE. *Founder.* 1799. Born near Annapolis (as below), July 12, 1747. In the Revolution first served in Col. Thomas Ewing's Battalion, date of commission, September 26, —; Assistant Surgeon, Col. William Richardson's Battalion, of Flying Camp, 1776; later, of General Smallwood's Command; health impaired at Valley Forge, and he returned home; later, employed in recruiting camp; settled after the War near Annapolis and had a large practice. A practitioner of note. Died at "Locust Grove," South River, Anne Arundel County, Md., May 16, 1802.

STOKES, JAMES ERNEST. 1897. Born at Baltimore, 1868. A.B., Johns Hopkins University, 1890; M.D., University of Maryland, 1892; Resident Physician, Hospital of the Good Samaritan, 1892-93; Resident Physician, Union Protestant Infirmary; Assistant Resident Gynecologist, Johns Hopkins Hospital, 1893-98; Resident Gynecologist, Johns Hopkins Hospital, 1898-99; practices at Salisbury, N. C.

*STOKES, WILLIAM H. 1834. Born at Havre de Grace, Md., January 21, 1812. A.B., Yale College, 1831; M.A., Yale, 1845; pupil of Drs. William Donaldson and R. S. Steuart; M.D., University of Maryland, 1834; Resident Physician, Maryland Hospital for the Insane, 1834-35; practiced at Mobile, Ala., 1835-40; Surgeon, Marine Hospital, Mobile, 1837-40; after visiting Europe, 1841-42, settled at Baltimore; Lecturer on Obstetrics, etc., University of Maryland, 1845-46; Professor of Obstetrics, Washington University, Baltimore, 1846-50; Visiting Physician, Mount Hope Retreat, Baltimore, 1843-87. Died at Baltimore, May 7, 1893.

STOKES, WILLIAM ROYAL. 1897. Born at Baltimore, August 21, 1870; grandson of last-named. Educated at Deichmann's Gymnasium

MEDICAL AND CHIRURGICAL FACULTY

School; M.D., University of Maryland, 1891; special student at the Johns Hopkins University and Hospital, 1892; Assistant in the Medical Clinic, Johns Hopkins Hospital Dispensary, 1892; Demonstrator of Anatomy, Woman's Medical College, Baltimore, 1891-93; Assistant Resident Pathologist, Boston City Hospital, 1893-95; Assistant Instructor, Johns Hopkins Hospital, 1895-96; Bacteriologist, Health Department of Baltimore, 1896—; Lecturer on Bacteriology, Baltimore Medical College, 1896-98; Associate Professor of Histology and Pathology, University of Maryland, 1898-1900; Professor of Pathology and Bacteriology, College of Physicians and Surgeons, 1900—. 1639 North Calvert Street, Baltimore.

STONE, DANIEL EDWIN. 1899. M.D., University of Maryland, 1864. Of Mount Pleasant, Frederick County, Md.

*STONE, JOSEPH. Pupil of Dr. Tabbs at White Plains; Censor, 1819 (*American Medical Recorder*) and 1831 (*American Journal of Medical Sciences*); married three times, his first wife being Miss Tabbs—left a son and daughter by each wife. Of Clement's Bay, St. Mary's County, Md. See lists of 1829, 1848 and 1853.

STONESTREET, EDWARD E. 1899. M.D., University of Maryland, 1852. Of Rockville, Md.

*STONESTREET, HENRY. 1811. Born near Glymont, Charles County, Md., on the Potomac River, September 18, 1776; son of Nicholas Stonestreet, and brother of Col. Nicholas Stonestreet, Attorney at Law. Said to have "graduated from the Medical College of Philadelphia, in the time of Rush" (name not in Catalogue); probably M.D., College of Medicine of Maryland, 1811; practiced first in Prince George County, Md.; later, in Charles County (Bryantown), Md; married Elizabeth Boarman. Died in middle life. In list of 1848 marked dead.

*STONESTREET, JAMES. 1801. Of the Western Shore of Maryland. See Treasurer's book.

STONESTREET, JOSEPH HARRIS. 1892. Born near Port Tobacco, Charles County, Md., August 17, 1862; son of Benjamin G. Stonestreet. A.B., Maryland Agricultural College, 1882; M.D., College of Physicians and Surgeons, Baltimore, 1885; Surgeon to Baltimore and Ohio Railroad at Barnesville, Montgomery County, Md.

*STORY, ASA. 1819. M.D. Of Frederick County, Md. See lists of 1848 and 1853.

MEDICAL AND CHIRURGICAL FACULTY

- STRAUGHN, WILLIAM DAVID. 1899. Born at Snow Hill, Md., September 17, 1863; son of David H. Straughn. A.M., Washington College, Chestertown, Md.; taught several years in the public schools; M.D., Jefferson, 1890; practiced for three years at Fairton, Cumberland County, N. J.; moved to Snow Hill, Md., 1893, where he has practiced ever since; Treasurer and Examiner of Worcester County Public Schools, 1898-1900; Physician to the Poor, 1898—.

MEDICAL AND CHIRURGICAL FACULTY

*THOMPSON, GEORGE. 1817. See list of 1848.

*THOMPSON, SAMUEL. *Founder.* 1799. Born at "Medical Hill," Queen Anne's County, Md., 1777. "Graduated at Philadelphia;" married Mary Adeline Thompson, of Philadelphia, February 20, 1803; married the second time, Sarah Smythe, September 15, 1811; had a hospital for inoculation at "Medical Hill." Died September 6, 1844.

THOMPSON, THOMAS H. 1841. Born in Pennsylvania. M.D., Jefferson, 1838. See Treasurer's book and list of 1848.

THOMPSON, WILLIAM HENRY. 1887. Born at Yonkers, N.Y., January 13, 1849. Educated at High School, Yonkers, N. Y.; M.D., Howard University, Washington, D. C., 1872; Attending Physician in Obstetrics, Provident Hospital, Baltimore. 526 St. Paul Street, Baltimore.

THOMPSON, WILLIAM S. 1840. M.D., University of New York. See list of 1848 and Treasurer's book.

*THOMSON, ABSALOM. Moved from Dorchester County to St. Michaels, Talbot County, Md. "A celebrated doctor and surgeon, who traveled about the country on a mule without saddle or shoes, in order more forcibly to impress his patients with his divine calling. His sole outfit was a jar of calomel and a rusty lancet with a four-pound metallic syringe having a nozzle of about a twelve bore shot gun. It is told of him that on one occasion he actually subdued a fire at a patient's house with a tub of water and his clyster pipe, as he called it. His practice became so extensive that he opened a hospital at his residence, in order to save time and travel; there for a number of years he reveled in blood and when satiated applied the actual cautery." Died September 24, 1842. See list of 1848.

*THOMSON, I. DAVIS. 1873. Born in Frederick County, Md., 1832. M.D., University of Maryland, 1861; began practice at Towson, Md.; Assistant Surgeon, C. S. A., 1862; later, Surgeon; resumed practice at Baltimore, 1865; Assistant Physician, Mount Hope Retreat for the Insane; Surgeon, Northern Central, Baltimore and Potomac, and Western Maryland Railroads. Died at Baltimore, June 14, 1881.

*THUM, GEORGE. 1821. M.D., University of Pennsylvania, 1817. Of Baltimore. In list of 1848 marked dead. ,

MEDICAL AND CHIRURGICAL FACULTY

TIENCH, CHRISTIAN S. 1834. M.D. Of Smithtown (?). See list of 1848.

TIFFANY, LOUIS McLANE. Born at Baltimore, October 10, 1844. B.A., University of Cambridge, England, 1866, and M.A., Cambridge, later; M.D., University of Maryland, 1868; Resident Physician, Almshouse; Demonstrator of Anatomy, University of Maryland, 1869-74; Professor of Anatomy, Maryland Dental College; Professor of Operative Surgery, University of Maryland, 1874-80; Professor of Surgery, 1880-1902; resigned his Chair, 1902; Dean, University of Maryland, 1879-86; President, Baltimore Medical Association, 1876-77; President of the Clinical Society of Maryland; Vice-President, Medical and Chirurgical Faculty, 1878-79 and 1880-81; President, Medical and Chirurgical Faculty, 1892-93; President of the American Surgical Association; President, Southern Surgical and Gynecological Association; Visiting Physician, City Almshouse; Consulting Surgeon, Johns Hopkins Hospital; Surgeon-in-Chief, Baltimore and Ohio Railroad; important contributions to Surgery of the Kidney and Superior Maxilla. 831 Park Avenue, Baltimore.

*TILDEN, CHARLES. 1810. Born in 1769; son of Dr. William Blay Tilden. Educated at Princeton College, and probably A.B.; pupil of his father; began practice at Still Pond, but in a few years settled on the paternal estate near Shrewsbury Church, as a farmer; Censor, Caroline County, 1826. "He was stately, dignified, precise in speech, sensible and eloquent, preferring the retirement and social intercourse of farm life to the labors and responsibilities of practice." Died in 1820, aged about fifty (Wroth).

*TILDEN, JOHN. 1801 (?). Born in 1760. Surgeon in Revolution; practiced at New Town, Frederick County, Md., till death; also a minister. Died at New Town, Md., July 21, 1838.

*TILDEN, WILLIAM BLAY. 1800. Born about 1774; third son of Dr. W. B. Tilden. Educated at Princeton College; pupil of Dr. Shaaff, of Annapolis, and attended lectures at the University of Pennsylvania; practiced at Georgetown Cross Roads, Kent County, succeeding his father and brother; married Mary Buchanan. "Sensible, judicious, and attentive to the sick; liberal to his younger brethren; a consistent member of the P. E. Church." (Address given in list of 1848 as Trappe, Talbot County, Md.) Died of typhoid fever about 1813.

TILGHMAN, CHARLES H. 1897. Born at Baltimore, January 6, 1846. Educated at private schools; M.D., University of Maryland, 1866;

MEDICAL AND CHIRURGICAL FACULTY

Resident Physician, Bayview Asylum, 1867; attended Guy's Hospital, 1867-68; then at Paris; Assistant Surgeon in the French Ambulance Corps, Franco-Prussian War; decorated by the Bavarian Government with "Order of Military Merit;" retired from practice, 1873; resides at the "Grosses," near Easton, Md.

- *TYLER, JOHN. *Founder.* 1799. Born in Prince George County, Md., June 29, 1763. Began study of medicine under Dr. Smith, of Georgetown; pupil at St. Bartholomew's Hospital, London, and received diploma, 1784; also pupil of John Hunter, Fordyce, Pott, Baillie and others; began practice at Frederick City, Md., 1786; according to Quinan, the first oculist in America; acquired a great reputation in ophthalmology; one of the first in the United States to operate for cataract, patients coming long distances to be "couched;" an officer in the "Whiskey Insurrection" in Pennsylvania; Elector of Jefferson; being possessed of a competency and, his hearing becoming dulled by age and disease, he retired from practice. Died, unmarried, at Frederick City, October 15, 1841.
- *TYLER, SAMUEL M. 1847. Born at Frederick, Md., December 10, 1820; son of William Tyler. Student of his father; M.D., University of Pennsylvania, 1842; "the first Surgeon in Maryland to adopt anæsthetics in surgery." Died at Frederick, Md., July 26, 1856. See *Trans., American Medical Association*, 1860.
- *TYLER, WILLIAM BRADLEY. Born at "Brough," Prince George County, Md., May 31, 1788. Pupil of Dr. Philip Thomas, of Frederick Town, 1806; M.D., University of Pennsylvania, 1809; Physician to the Marine Hospital, Baltimore, 1809-10; practiced at Leesburg, Va., 1810-14, and at Frederick Town, Md., 1814-42; Censor, 1831. Died at Frederick City, Md., September 9, 1863.

MEDICAL AND CHIRURGICAL FACULTY

- *TYLER, WILLIAM, SR. 1828. Born in Prince George County, Md., May 5, 1784. Pupil of his uncle (John Tyler, of Frederick); M.D., University of Pennsylvania, 1804; a very popular and successful practitioner for sixty-one years; Founder and President until his death of the Farmers and Mechanics Bank of Frederick; Director of the Chesapeake and Ohio Canal; intimate friend and Elector of Andrew Jackson. Died at Frederick, Md., April 12, 1872, after sixty-six years of practice. See lists of 1848, 1853 and 1873.
- *TYSON, SAMUEL ELLICOTT. 1832. Born in Maryland, 1809. Pupil of Dr. Wm. Handy; M.D., Washington College, Baltimore (?); later, in hospital, Philadelphia; gave up practice for pharmacy. Died at Washington, D. C., 1883.
- UHLER, JOHN REESE. 1892. Born at Baltimore, May 3, 1839. Educated at Carey's and Topping's Schools; attended College of Pharmacy; M.D., University of Maryland, 1861; Acting Assistant Surgeon, U. S. A., 1862-64; Surgeon, Fifth Maryland U. S. Volunteers, 1864-65; Resident Physician, Bayview Asylum, one year; President, Baltimore Medical Association, 1873-74; Professor of Practice of Medicine, Baltimore Medical College. 1531 McCulloh Street, Baltimore.
- ULMAN, SOLOMON JAY. 1892. Born at Baltimore, September 27, 1865. Educated at Johns Hopkins University; M.D., University of Maryland, 1889; Post-graduate student, Johns Hopkins Hospital; Police Surgeon, 1899—. 1725 Park Avenue, Baltimore.
- *VALIANT, JOHN A. 1831. M.D., University of Maryland, 1830. Of Baltimore. See list of 1848.
- VAN BIBBER, ARMFIELD FRANKLIN. 1898. Born at Bel Air, Harford County, Md., June 18, 1872. Educated at Virginia Military Institute; M.D., University of Maryland, 1896; practices at Bel Air.
- VAN BIBBER, CLAUDE. 1878. Born at Baltimore, June 27, 1853. A.B., Georgetown University, 1874; M.D., University of Maryland, 1877; Founder, Dispensary for Nervous Diseases, October, 1878, and Orthopædic Surgeon there, 1878-90; Visiting Physician, St. Agnes Hospital, 1878-93, and to the Home of the Friendless, 1881—; Visiting Surgeon, St. Joseph's Hospital, 1895—. 9 East Read Street, Baltimore.
- *VAN BIBBER, JOHN PIERRE. 1875. Born at Baltimore, January 15, 1850. A.B., Loyola College, Baltimore, 1867; student of Dr. W.

MEDICAL AND CHIRURGICAL FACULTY

Chew Van Bibber; M.D., University of Maryland, 1871; studied in Europe, 1871-74; a Founder of the American Neurological Association; Lecturer on Neurology, Washington University, Baltimore; Founder, Dispensary for Nervous Diseases, Baltimore (this was the first special dispensary in this department at Baltimore); an author of Keating's "Encyclopædia of Diseases of Children;" Lecturer at the Peabody Institute, 1881. Died at Baltimore, May 5, 1892.

*VAN BIBBER, WASHINGTON CHEW. 1852. Born in Carroll County, Md., July 24, 1824. Attended Dickinson College and Mount St. Mary's College, Emmitsburg; A.B., Jefferson College, Cannonsburg, Pa., 1843; pupil of Dr. N. R. Smith; M.D., University of Maryland, 1845; practiced in Mississippi and New Orleans; settled at Baltimore, 1846; Vaccine Physician, 1847-50; a Founder of the Pathological Society, 1853; Secretary, Pathological Society, 1853-58; Recording Secretary, Medical and Chirurgical Faculty, 1857-59; a Founder of the Clinical Society of Maryland, 1875, and Baltimore Academy of Medicine, 1877; Attending Physician, Baltimore Almshouse; Associate Editor, *Virginia Medical Monthly*, 1856-59, and of the *Maryland and Virginia Medical Journal*, 1859-61; Lecturer on the Diseases of Children and Venereal Diseases at the Summer Course of the University of Maryland, and Attending Physician, Special Dispensary, 1866 (these were the first clinics at the University on the Diseases of Children, and this was the first step towards the establishment of an outdoor clinic); a Founder and the first President of the Baltimore Pathological Society, 1867; Peabody Lecturer, 1869; President of Baltimore Academy of Medicine, 1887. Died at Baltimore, December 14, 1892.

*VAN LEAR, MATTHEW SIMS. 1811. M.D., University of Pennsylvania, 1811. Of Sassafras Neck, Cecil County, Md.

*VAN LEAR, WILLIAM. 1817 (?). M.D., University of Pennsylvania, 1817. Of Williamsport, Md. See lists of 1848 and 1853.

VAN MARTER, JAMES GILBERT. 1890. Born at Basle, Switzerland, 1868; son of J. G. Van Marter, of New York. Brought up at Florence and Rome, Italy; Licentiate in Letters at Collegio Romano; matriculated at University of Rome, 1886; matriculated at University of Maryland, 1887, and graduated M.D. therefrom, 1890; graduated at University of Rome, 1891; took special courses with Kocher, at Berne, Switzerland; practiced at Rome one year; health failing,

MEDICAL AND CHIRURGICAL FACULTY

spent three years on Pacific Coast; has practiced at Savannah since 1897; Librarian of Georgia Medical Society; Physician and Surgeon to Savannah Hospital.

VAN NESS, EUGENE McEVERS. 1894. Born at Baltimore, July 24, 1868. Educated at City College; M.D., University of Maryland, 1891; Assistant Resident Surgeon, Johns Hopkins Hospital, 1891-92; President of Board of Medical Examiners of Maryland. 1515 Park Avenue, Baltimore.

*VEAZEY, EDWARD. 1822. Born at Cherry Grove, Cecil County, Md., March 26, 1799; son of Gov. Thos. Ward Veazey. M.D., University of Maryland, 1822; practiced in Cecil County, in Western Pennsylvania and in Virginia; settled finally at St. Louis, Mo., where he died, December 14, 1870. See list of 1848.

*VEAZEY, JOHN THOMPSON. Born at "Essex Lodge," Sassafras Neck, Cecil County, Md., July 22, 1783; son of Dr. T. B. Veazey. Attended lectures at University of Maryland (?); took part in defense of Fredericktown, Md., in War of 1812; Censor for Cecil County, 1831 (*American Journal of Medical Sciences*). Died March 30, 1839. See list of 1848.

*VEAZEY, PEREGRINE WARD. 1817. Practiced at Sassafras Neck, Cecil County, Md., and died unmarried. See lists of 1829, 1848 and 1853.

*VEAZEY, THOMAS BROCKUS. 1801 (?). Born at "Essex Lodge," Cecil County, Md., March 29, 1750. Succeeded to the family homestead in 1777, and there lived as a planter and physician until his death; Vestryman of St. Stephen's Parish and Delegate to the first Convention of the P. E. Church in Maryland, in 1792. Died at "Essex Lodge," Sassafras Neck, Cecil County, Md., 1806.

*VEES, CHARLES H. 1888. Born in 1859. M.D., College of Physicians and Surgeons, Baltimore, 1886. Died at Baltimore, May 27, 1892.

*VETHAKE, JOHN W. A Founder of Washington Medical College, Baltimore, 1827; Professor of Chemistry, Washington Medical College, Baltimore, 1827-28.

*VIRDIN, WILLIAM WARD, JR. 1878. Born at Baltimore, August 12, 1829; son of Capt. W. W. Virdin. M.D., University of Maryland, 1866; Surgeon, C. S. A. Died at Lapidum, Harford County, Md., May 20, 1897.

MEDICAL AND CHIRURGICAL FACULTY

- VOGEL, CHARLES W. 1897. Born at Baltimore, August 8, 1870. Educated at Knapp's Institute; Ph.G., Maryland College of Pharmacy, 1892; M.D., College of Physicians and Surgeons, Baltimore, 1895; Assistant Resident Physician, Maryland Lying-in Asylum, 1895-96; Assistant Demonstrator of Anatomy, College of Physicians and Surgeons; practiced at Baltimore, 1896-99; Assistant Surgeon, Marine Hospital Service, 1899—; resides at San Francisco, Cal.
- WADDELL, DAVID F. 1899. Born at Preston, Caroline County, Md., July 16, 1852. Graduated from Preston Academy; M.D., Chicago Medical College, 1879; practices at Millington, Md.
- WADE, J. PERCY. 1893. Born in Montgomery County, Va., October 22, 1869. Educated at City College, Baltimore, and Johns Hopkins University; M.D., College of Physicians and Surgeons, Baltimore, 1891; Resident Physician, City Hospital, 1891; Assistant Physician, 1891, and Superintendent, Maryland Hospital for Insane (Spring Grove), 1896—.
- WADLOW, —. 1823. See list of 1848. (Can this be "Wardlow, Jos. J., S. C., 1836," Jefferson? There was a Dr. Wm. Wardlow, Richmond, Va., "apothecary and physician," 1817.)
- *WAGGAMAN, HENRY PIERPONT. Born at Monie, Somerset County, Md., 1785; son of Henry Waggaman. Is said to have attended medical lectures at Philadelphia about 1808-09; married the widow of Dr. Cooper, of Dorchester County; Censor, 1822; resided at Newmarket, Dorchester County, Md. Died after 1843. In list of 1848 marked dead.
- *WAGNER, ALBERT SCHMIDT. 1892. Born near Baltimore, September 20, 1869; M.D., College of Physicians and Surgeons, Baltimore, 1892; Resident Physician, Hebrew Hospital. Died at Baltimore, February 23, 1893.
- WAGNER, FRANK E. 1894. M.D., College of Physicians and Surgeons, Baltimore, 1894; Assistant Surgeon, Maryland Naval Reserves, 1898. 1717 North Calvert Street, Baltimore.
- *WAILES, WILLIAM HANDY. 1827. Born April 7, 1801. "Probably graduated, 1825-30;" married Miss Leonard, August 26, 1834; practiced at Salisbury, Md. Died at Salisbury, April 29, 1849. See lists of 1848 and 1853.

MEDICAL AND CHIRURGICAL FACULTY

- WAINWRIGHT, CHARLES W. 1896. Born at Princess Anne, Md., May 8, 1858; son of Edward J. Wainwright, Editor of *Somerset Herald*. A.B., Washington College, Chestertown, Md., 1876; M.D., College of Physicians and Surgeons, Baltimore, 1886. Of Princess Anne, Somerset County, Md.
- *WALKER, EDMUND RHETT. 1890. Born at Beaufort, S. C., 1836. Educated at the University of Virginia and College of Columbia, S. C.; A.B., College of Columbia, 1856; M.D., University of Virginia, 1857; M.D., Bellevue Hospital Medical College, 1858; Assistant Surgeon, Bellevue Hospital, 1858-60; Surgeon, C. S. A., 1861-65; settled at Baltimore after the War as Coroner; Professor of Surgery, Washington University, Baltimore, 1876-77; Examiner, Equitable Life Assurance Association; Attending Physician, Church Home and Infirmary; Professor of Surgery, Baltimore Medical College. Died at Baltimore, September 30, 1891.
- *WALKER, THOMAS CRADOCK. Born at "Garrison Forest," Baltimore County, Md., 1773; grandson of Dr. James Walker, of Anne Arundel County, 1715. Educated by Revs. Andrews and West; pupil of Dr. Thomas Cradock; attended medical lectures at the University of Pennsylvania (Quinan says, M.D., there, 1796, in class with N. Potter and A. Pue, but his name is not in the Catalogue); Hospital Surgeon's Mate, 1813-15, at Burlington and Plattsburgh; Associate in Practice with Dr. Thomas Cradock, *Founder*, and became his heir. Died at "Trentham," Garrison Forest, Baltimore County, Md., May 31, 1860.
- WALLACE, JOSEPH VEAZEY. 1898. Born at Cincinnati, O., April 12, 1830. Educated by private tutor at Elkton, Md.; pupil of Dr. James Robert Ward, Clearspring, Washington County, Md., 1850-51; M.D., University of Maryland, 1853; Member of the Board of Examining Surgeons at Elkton; President of the Cecil County Medical Society; resides at Chesapeake City, Cecil County, Md.
- WALLACE, W. W. 1833. M.D. See list of 1848.
- *WALLS, ENOCH GEORGE. 1873. Born at Sudlersville, Queen Anne's County, Md., September 3, 1850; son of Joshua Walls. Educated at the Normal School, 1867-68; pupil of Dr. C. M. Morfit, of Baltimore; M.D., Washington University, Baltimore, 1872; settled in practice at Baltimore; Vaccine Physician, 1872-80; Resident Physician, Red Sulphur Springs, Roanoke, Va., 1884; removed to Colorado Springs, 1886; appointed Aide on Governor Routh's staff, 1891;

RICHARD S. STEUART

1797-1876.

MEDICAL AND CHIRURGICAL FACULTY

removed to Smyrna, Del., 1892; Examining Physician, Fidelity Life Insurance Company of Philadelphia, 1892; removed to Washington, D. C., 1893; smallpox expert in 1895; Attending Physician, Forest Glen Seminary for two years; Surgeon to American Line steamer "Kensington," 1902. Died at New York, October 5, 1902. See Trans., 1873.

*WALLS, J. WILLIAM. 1878. Born at Harper's Ferry, W. Va., 1835. Educated at Winchester, Va.; M.D., Winchester Medical College; Professor of Anatomy and Physiology, Winchester Medical College, 1861; Surgeon, C. S. A., 1861-65; removed to Baltimore, 1865; Professor of Anatomy and Physiology, Washington University, Baltimore, 1867. Died at Philadelphia, May 19, 1881.

*WALLS, WILLIAM W. 1814. M.D., University of Maryland, 1814; Inaugural Dissertation on "Rabies Canina." Of Winchester, Va. In list of 1848 marked dead.

WALTER, MILTON RAPHAEL. 1894. Born at Baltimore, June 30, 1870. Educated at the City College; Ph.D., Maryland College of Pharmacy, 1890; M.D., University of Maryland, 1893; Assistant Resident Physician, Bayview Hospital, 1893-94; Assistant in Neurology, Johns Hopkins Dispensary, 1895; Assistant to Professor Krause, University of Berlin, 1896; Assistant Laryngologist, Bayview Asylum, and Assistant in the Nose and Throat Department, University of Maryland; Assistant in Pathology, University of Maryland, 1899-1900; Demonstrator of Histology and Embryology, 1900—1013 Madison Avenue, Baltimore.

WALTEMEYER, J. TASSEY. 1893. Born at Baltimore, November 14, 1865. M.D., Jefferson, 1887. Of Alberton, Md.

WALTON, HENRY ROLAND. 1873 (?). Born in St. Mary's County, Md., February 29, 1828. Educated at St. John's College, Alumnus of 1848; M.D., University of Maryland, 1850; Resident Physician, Baltimore Almshouse, 1849-51; in hospitals of Paris, 1851-53; practices at Annapolis.

*WALTZ, PETER. *Founder.* 1799. Of Washington County, Md. See lists of 1807 and 1848.

*WARD, JAMES ROBERT. 1829. Born in Cecil County, Md., 1807. Educated at Boisseau's Academy; M.D., University of Maryland, 1828; Surgeon, U. S. N.; began practice in Washington County, Md.;

MEDICAL AND CHIRURGICAL FACULTY

removed to Govanstown, Md., 1837; Vice-President, Medical and Chirurgical Faculty, 1874-75; President, Baltimore Academy of Medicine, 1879-80; President, Alumni Association, University of Maryland, 1878 and 1881; President, State Board of Health. Died at Govanstown, Md., April 29, 1884.

WARD, THOMAS J. 1878. M.D., University of Maryland, 1877. 205 East Lafayette Avenue, Baltimore.

WAREHAM, EDWARD A. 1897. Born in Ritchie County, Va., September 28, 1858. M.D., University of Maryland, 1883. Of Hagerstown, Md.

*WARFIELD, ANDERSON. 1801 (?). Of Baltimore. See lists of 1807 and 1848. Marked dead in the latter. (See Anderson, Warfield.)

*WARFIELD, CHARLES ALEXANDER. *Founder.* 1799. Born in Howard County, Md., December 3, 1751; son of Azel Warfield. M.B. (yet he signs a diploma of the College of Medicine of Maryland in 1812 without putting the degree after his name); Captain of a Company of Cavalry, and leader in the burning of the cargo of tea on the "Peggy Stewart" in the harbor of Annapolis, October 19, 1774; on the Committee of Observation of Anne Arundel County, 1775; First Major of Elk Ridge Battalion, 1776; engaged in the manufacture of saltpeter the same year; Judge of Anne Arundel County Court, 1777; President, College of Medicine of Maryland (University of Maryland), 1812. "He was the first to propose a separation from the mother country. His father, when warned by Mr. Carroll that such rash words might bring him trouble, replied, 'My son knows what he is saying and I agree with him.' * * * One year after, mounting his trooper, he led his neighbors to Annapolis. Drawing them into line before the now famous Peggy Stewart House, he called Mr. Stewart to accept one of two propositions: 'You must either go with me and apply the torch to your own vessel or hang before your own door.' His manner of expression, though courteous, carried the conviction that it would be safer to accept the former, and Major Warfield stood beside Mr. Stewart when he applied the torch. He is so represented in the recent painting of Mr. Mayer, now in the State House, Annapolis." There is a portrait of Dr. Warfield, by Peale, in the gallery of Dr. Evan W. Warfield, his grandson, which is reproduced in this work. Died at "Bushy Park," Anne Arundel County, Md., January 29, 1813.

WARFIELD, GEORGE W. 1828. M.D., University of Maryland, 1825. Of Nashville, Tenn. See list of 1848.

MEDICAL AND CHIRURGICAL FACULTY

- *WARFIELD, GUSTAVUS. 1801 (?). Born at "Bushy Park," Anne Arundel (now Howard) County, Md., March 31, 1784; son of Dr. C. A. Warfield. Educated at Frederick City Academy and St. John's College; student of his father; M.D., University of Pennsylvania, 1806; began practice at once as partner of his father, succeeding to the entire practice on the death of C. A. Warfield in 1813; practiced for sixty years and in seven counties of Maryland; Censor, 1840. Two cases are reported by him as occurring in 1815 and 1829 (*Maryland Medical Recorder*, vol. iii, 1832). "A good man and good physician, courteous, temperate and benevolent, quick in diagnosis, sound in judgment, truthful and abounding in resource, patient, conscientious, public-spirited." Died at "Longwood," Howard County, August 8, 1866.
- *WARFIELD, JESSE LEE. 1823. Born in Frederick County, Md., November 27, 1801; son of Alexander Warfield. Student of Dr. S. Baker, Baltimore; M.D., University of Maryland, 1823; practiced in Frederick County, 1823-32; moved to New Windsor, 1832, to Westminster, Md., 1846, and to Baltimore, 1868; President, Farmers and Mechanics National Bank. Died near Baltimore, February 9, 1887.
- WARFIELD, MACTIER. 1890. A.B., Johns Hopkins, 1881; M.D., University of Maryland, 1884; Chief of Clinic, Throat and Nose Department, Johns Hopkins Hospital; Instructor in Laryngology, Johns Hopkins Medical School; President of the Board of Examiners of Maryland; Member of the Board of Supervisors of Charities of Baltimore. 15 West Franklin Street, Baltimore.
- *WARFIELD, PEREGRINE. 1800. Born in Maryland, February, 1779. Practiced a few years at Liberty Town; then settled at Georgetown, D. C.; a Founder of the Medical Society of the District of Columbia, 1819. Dr. Peregrine Warfield was a son of Dr. C. A. Warfield. In 1812, during the political riots at Baltimore, while defending the Federalist press of Hon. Charles Alexander Contee Hanson, he was wounded. Died at Georgetown, July 24, 1856. See lists of 1807 and 1848.
- WARFIELD, RIDGELY BROWN. 1890. Born in Howard County, Md., June 15, 1864. M.D., University of Maryland, 1884; Assistant Resident Physician, University Hospital, 1884-85; Resident Physician, Bayview Asylum, 1885-86; Demonstrator of Anatomy, University of Maryland, 1892-93; Demonstrator of Anatomy, Baltimore Medical College, 1893-95; Associate Professor of Anatomy, Baltimore Medical College, 1895—; Surgeon-General of Maryland, 1897—; on

MEDICAL AND CHIRURGICAL FACULTY

the Surgical Staff of the Maryland General Hospital. 845 Park Avenue, Baltimore.

*WARNER, AUGUSTUS LOCKMAN. 1829. Born at Baltimore. A.M., Princeton College, 1826; M.D., University of Maryland, 1829; had a private dissecting room at Baltimore, 1830-34; Physician to Cholera Hospital, Baltimore, 1832; Professor of Anatomy, Physiology and Surgery, University of Virginia, 1834; Professor of Surgery, Hampden-Sidney Medical College, Richmond, Va. Died at Richmond, May 5, 1847.

WARNER, A. SHELMON. 1892. Born at Manchester, Carroll County, Md., March 30, 1856. Educated in York County (Pa.) Academy and State Normal School, Millersville, Pa.; taught school five years; Principal Newmarket Grammar School, two years; M.D., College of Physicians and Surgeons, Baltimore, 1881; practices at 1120 North First Street, East, Baltimore.

*WARREN EDWARD. Born in Tyrrell County, N. C., 1828. Educated at the University of Virginia; M.D., University of Virginia, 1850; M.D., Jefferson, 1851; began practice at Edenton, N. C.; at Paris, 1854-55; Fiske Fund Prize Essayist, Rhode Island, 1856; Editor, *Medical Journal of North Carolina*; Professor of Materia Medica, University of Maryland, 1860-61; Editor, *Baltimore Journal of Medicine*, 1861 (bimonthly, three numbers); Surgeon-General of North Carolina and Medical Inspector of the Army of Northern Virginia, C. S. A., 1861-65; reorganized Washington University Medical School, Baltimore, 1867, and Professor of Surgery, 1867-71; Editor, *Medical Bulletin*, 1868-70; Vice-President, Medical and Chirurgical Faculty, 1871-72; a Founder of the College of Physicians and Surgeons, Baltimore, 1872, and Professor of Surgery there, 1872-73; Surgeon in Chief, Egyptian Army, 1873-75; settled at Paris, 1875; LL.D., University of North Carolina; Chevalier, Legion of Honor, France; Knight, Order of Isabella; claimed the discovery of hypodermic medication, 1850-51; invented a splint for the treatment of fracture of the clavicle, 1872; author, "Practical Surgery," 12mo, Richmond, 1863; "A Doctor's Experience in Three Continents," 8vo, Baltimore, 1885. Died at Paris, September 16, 1893.

WATERS, EDMUND GEORGE. 1883. Born at Baltimore, June 16, 1830. Student in Chemistry, University of Maryland, 1848; pupil of Prof. N. R. Smith; M.D., University of Maryland, 1853; practiced in Somerset County, Md., 1853, and at Baltimore, 1854-65; President, Young Men's Christian Association, Baltimore, 1860-61; Acting

MEDICAL AND CHIRURGICAL FACULTY

Assistant Surgeon, U. S. A., 1862-65; Professor of Natural Science, Baltimore City College, 1866-68; removed to Cambridge, Md., 1868; Member of the House of Delegates, Dorchester County, 1875-77; a Founder of the Medical and Surgical Society of Baltimore (composed of Army Surgeons), 1863; and of Baltimore Medical Association, 1866; President, Baltimore Medical Association. 1711 Madison Avenue, Baltimore.

WATERS, FRANKLIN. 1826. M.D., University of Maryland, 1826; M.D., University of Pennsylvania, 1838. Of Prince George County, Md. See lists of 1848, 1853 and 1873, Treasurer's MS. book and Trans., 1857.

*WATERS, HORATIO W. 1819. M.D., University of Maryland, 1817. Of Baltimore. In list of 1848 marked dead.

*WATERS, JAMES W. 1833. M.D., University of Maryland, 1832; located in practice at Mount Grove, Anne Arundel County, Md.; in 1839 moved to Georgia; after five or six years, returned to Anne Arundel County, staid there two years, then spent two years at Baltimore, after which settled finally at Mount Grove. See lists of 1848, 1853 and 1873.

*WATERS, JOHN. M.D., University of Maryland, 1819 ("Tenn."). See list of 1848.

*WATERS, JONATHAN. 1811. M.D., College of Medicine, Maryland, 1811 (?); Censor of Anne Arundel County, Md., 1826. See lists of 1848 and 1853.

*WATERS, NEHEMIAH. 1808. In list of 1848 marked dead.

*WATERS, ROBERT. 1810. Not an M.D. See list of 1848.

WATERS, SOMERSET RICHARD. 1898. Born at Clarksburg, Montgomery County, Md., December 14, 1829; son of Richard R. Waters. Educated at Rockville Academy; taught private school; student of Drs. Dunbar and P. C. Williams, 1856-57; M.D., University of Maryland, 1858; has practiced ever since at Watersville, Carroll County, Md.; recently has been connected with Treasury Department of Maryland, which has necessitated frequent visits to Annapolis, and practice has consequently been limited almost entirely to consultations.

*WATERS, WASHINGTON. 1826. Born at "Belmont," near Brookeville, Montgomery County, Md., 1804. Pupil of Dr. Tyler, of Frederick

MEDICAL AND CHIRURGICAL FACULTY

City; M.D., University of Maryland, 1826; immediately began practice near Goshen, Montgomery County, continuing it over forty years; the latter part of his life was devoted to farming; served in the Maryland Senate and House of Delegates several terms. Died February 24, 1882. See lists of 1848, 1853 and 1873.

*WATERS, WILLIAM. 1824. Born in 1800. M.D., University of Maryland, 1824; Censor, 1840; Orator at meeting of Medical and Chirurgical Faculty at Frederick City, Md., 1857; Vice-President, Medical and Chirurgical Faculty, 1857-58. Died at Frederick City, Md., July 7, 1862.

- *WHEELER, HEZEKIAH. 1809. In list of 1848 marked dead.

MEDICAL AND CHIRURGICAL FACULTY

- WHITAKER, JAMES S. 1898. M.D., Jefferson, 1879. Of Cherry Hill, Cecil County, Md.
- WHITAKER, SAMUEL A. 1833. M.D., University of Pennsylvania, 1833. Of Pennsylvania.
- *WHITE, ALWARD McKEEL. 1830. Born at Cambridge, Dorchester County, Md., September 29, 1807; son of Rev. A. M. White, of the M. E. Church. M.D., University of Maryland, 1829; practiced for forty years in Talbot County (in the Archives he is credited to Greensboro, Caroline County). Died at Miles River Neck, Talbot County, Md., 1884.
- *WHITE, EDWARD. *Founder.* 1799. Born March 30, 1755, probably at the family seat in Caroline County; son of John and Elizabeth Driver White. M.B. (his granddaughter states that he graduated at the Medical College of Philadelphia, at 21, but his name is not in the Catalogue); at the opening of the Revolution, a number of the medical students in the Philadelphia College joined a company and fought in the Continental Army. His grandson, Mr. J. McKenny White, of Baltimore, says he equipped a company at his own expense and took it to Trenton. He lived and died at Cambridge, and practiced in Dorchester, Talbot, and Caroline Counties. His granddaughter, Miss Henrietta Le Compte, has given to the Faculty an oil portrait of him painted by a celebrated Swiss artist the year before the Doctor's death, when he was seventy. He was married three times, his last wife being Miss Brown, of Kent (1800). After a violent illness in early life, he became a Methodist, and was ever afterwards a pillar of that Church. He was a very benevolent man, giving much unostentatiously. Died March 23, 1826, of dropsy.
- *WHITE, EDWARD HIRAM. 1853. Born in Somerset County, Md., October 20, 1820; son of Henry White. Educated at Washington Academy, Somerset County, and at Jefferson College, Pa.; M.D., University of Pennsylvania, 1841; practiced some years in Somerset County and after that up to the period of his death at Baltimore; Attending Physician to City Almshouse, 1853-55; retired, 1892. Died at Baltimore, June 3, 1897. See Trans., 1853-59.
- *WHITE, GIDEON, JR. 1824. Surgeon's Mate, U. S. N., December 10, 1814; Assistant Surgeon, May 2, 1825; dismissed, January 12, 1832. See Treasurer's MS. book and list of 1848.

MEDICAL AND CHIRURGICAL FACULTY

- WRIGHT, T. A. 1892. M.D. (There was a "Thomas A. Wright," at Butler, Pa.—Polk, 1898.)
- *WRIGHT, THOMAS H. 1809. (Examined for license on the Eastern Shore by Dr. E. Martin.) Born at New York (?). Surgeon's Mate, Baltimore Battalion, 1813; M.D. (Honorary), University of Maryland, 1819; M.D., College of Physicians and Surgeons, New York, 1823; elected Professor of Anatomy, University of Maryland, 1831, but resigned without lecturing; Attending Physician, Baltimore Almshouse, 1829-33 (1829-34—Q.); author of "Sketch of Malignant Epidemic Prevailing in Maryland," 8vo, Baltimore, 1815. Died at Baltimore, 1856. (According to Dr. F. Donaldson, died in 1847.)
- *WROTH, PEREGRINE. 1805 (?). Born in Kent County, Md., April 7, 1786. Graduated at Washington College, Chestertown; student of Dr. Edward Worrell, 1803-04, and of Dr. M. Brown, 1804-07; attended medical lectures at the University of Pennsylvania; M.D. (Honorary), University of Maryland, 1841; began practice at Chestertown, 1807, as partner of Dr. Brown; removed to Baltimore in 1868; Professor of Chemistry, Washington College, Chestertown, 1846-54; later, President of the Board of Visitors; a Founder of

MEDICAL AND CHIRURGICAL FACULTY

the American Medical Association and the College of Pharmacy, Baltimore; Vice-President, Medical and Chirurgical Faculty, 1848-51, 1853-54, and 1856-57; signs a diploma as President, 1849-50. Died at Baltimore, June 13, 1879.

*WROTH, THOMAS G. Born in Kent County, Md., 1814. M.D., University of Maryland, 1837; practiced in Kent County till 1868, then moving to Baltimore and engaging in mercantile business. Died at Baltimore, June, 1888.

WROTH, WILLIAM JACKSON. 1852. Born at Chestertown, Md., March 12, 1830. A.B., Washington College, Chestertown, 1849; later, A.M., Washington College, Chestertown; Founder of "Rush Club;" M.D., University of Maryland, 1852; has practiced at Baltimore ever since until recently; Senior Grand Warden, Grand Lodge Masons, 1863-64; Vaccine Physician, 1861 and 1873; retired from practice. 1729 West North Avenue, Baltimore.

WUNDER, JOSEPH C. 1891. Born at Baltimore, October 18, 1865. M.D., University of Maryland, 1889; Chief of Surgical Clinic, Woman's Medical College; Vaccine Physician, three terms. 1075 West Fayette Street, Baltimore.

WYLIE, HAMILTON BOYD. 1881. Born at Baltimore, May 5, 1855; son of Samuel F. Wylie. M.D., College of Physicians and Surgeons, Baltimore, 1876; M.D., Bellevue Hospital Medical College, 1878; Resident Student, Bayview Asylum, 16 months; Acting Assistant Surgeon, Marine Hospital Service, one year; Assistant in Diseases of the Skin, Johns Hopkins Hospital, six years. 303 Roberts Street, Baltimore.

WYMAN, WALTER. 1882. Born at St. Louis, August 17, 1848. Graduated from the City University, St. Louis, 1866; A.B., Amherst, 1870; later, A.M., Amherst; M.D., St. Louis Medical College, 1873; in the city hospitals, 1873-75; Assistant Surgeon, Marine Hospital Service, 1876; Surgeon-General, Marine Hospital Service, 1891—; LL.D., Western University of Pennsylvania, 1897; has charge of twenty-two marine hospitals and a large number of relief stations, giving relief to more than 50,000 sailors of the American Merchant Marine; is charged with the administration of National Quarantine Stations. "The Richmond," Washington, D. C.

WYSE, WILLIAM P. E. 1894. Born at "Deer Park," near Pikesville, Baltimore County, Md., June 2, 1866. Educated at City College,

MEDICAL AND CHIRURGICAL FACULTY

Baltimore; M.D., University of Maryland, 1886; Resident Physician, Bayview Hospital, 1886-87; Assistant Visiting Physician, Mount Hope Retreat; Surgeon, Pikesville Soldiers' Home, 1891—; resides at Pikesville, Md.

*WYVILL, WALTER. Born in Anne Arundel County, Md., March 4, 1781. A.M., St. John's; 1798; Surgeon to ship "Missouri" (by recommendation of Dr. Rush), an armed trading vessel, in which he cruised three years without loss of a man; returned to Philadelphia and graduated from the University of Pennsylvania, 1802 (?) (his name is not in the Catalogue there); practiced in Anne Arundel and Calvert Counties for fifty-two years. Died at Piscataway, Prince George County, August 4, 1860 (Q.).

*WYVILLE, DORSEY. *Founder.* 1799. Of Dorchester County, Md. See lists of 1807 and 1848.

*YEATES, HENRY P. P. 1853. Born at Baltimore. M.D., University of Maryland, 1845; Vaccine Physician, 1846; Assistant Surgeon, Dixie Light Infantry, 1861-65 (Q.). Died at Baltimore. See Trans., 1873.

*YEATES, JOHN LLOYD. 1822. Born in Harford County, Md., December 27, 1802. Educated at Baltimore College; M.D., University of Maryland, 1822; Member of City Council, 1836-40; Orator, Medical and Chirurgical Faculty, 1840; President, Medical and Chirurgical Faculty, 1853-54; President, Medical and Surgical Society of Baltimore, 1855-56. Died at Baltimore, July 24, 1875.

*YOUNG, DANIEL. 1807. See lists of 1807 and 1848.

YOUNG, HUGH HAMPTON. 1898. Born at San Antonio, Tex., September 18, 1870; son of Gen. William H. Young. A.B., A.M., 1893, and M.D., 1894, University of Virginia; Instructor in Genito-urinary Surgery, Johns Hopkins University; at present, Associate in Genito-urinary Surgery, Johns Hopkins University; Attending Surgeon, Johns Hopkins Dispensary; Attending Surgeon, Union Protestant Infirmary. 1005 North Charles Street, Baltimore.

YOUNG, JAMES. Of Frederick County, Md. (There is a "Young, James, Pa., 1823," Catalogue of the University of Pennsylvania.) See list of 1848.

MEDICAL AND CHIRURGICAL FACULTY

- *YOUNG, JOHN, JR. *Founder.* 1799. Born at Miles River Neck, Talbot County, Md. Went to Florida, but returned to Trappe, Talbot County, Md., about 1799; Surgeon, Fourteenth Regiment of Infantry, U. S. A., June 4, 1812. "A bachelor, short and stout, a good Latin scholar and well posted in medical literature." Died at his residence at Trappe, about 1824, well advanced in years.
- *YOUNG, SAMUEL. *Founder.* 1799. Born in Maryland, 1739. "A man of worth and a physician of skill and experience." (There was a Dr. Young, Member of the Board of Examining Surgeons in the Revolution—Toner.) Died at Hagerstown, Md., 1838. (See Young, John, Jr.)
- ZACHARIAS, JOHN FORNEY. 1898. Born at Frederick City, Md. Educated at Frederick Academy; M.D., Jefferson, 1860; practiced at Frederick City, 1860-61; in C. S. A., 1861; Assistant Surgeon, C. S. A., 1862-65; practiced at Leesburg, 1865-70; since that at Cumberland, Md. "During my service in the hospital at Danville, Va., I first used maggots to remove the decayed tissue in hospital gangrene and with eminent satisfaction. In a single day they would clean a wound much better than any agents we had at our command. I used them afterwards at various places. I am sure I saved many lives by their use, escaped septicæmia, and had rapid recoveries."
- *ZELLER, HENRY. 1837. Born near Williamsport, Washington County, Md., August 17, 1810; son of Otho Zeller. Educated at Hagerstown Academy; pupil of Dr. Frederick Dorsey; M.D., Jefferson, 1837; practiced at Williamsport, Md. Died July, 1885 (Q.).
- ZEPP, JAMES ALBERT. 1897. Born in Carroll County, Md., August 9, 1856. Graduated from Maryland State Normal School; M.D., University of Maryland, 1887. 3050 West North Avenue, Baltimore.
- ZIEGLER, CHARLES BENJAMIN. 1890. Born at Baltimore, July 8, 1855. Educated at Deisterwig Institute; M.D., Washington University, Baltimore, 1876; Resident Physician, City Hospital, 1876-77; practiced at St. Michaels, 1877-80; later, at Baltimore; Vaccine Physician and Station-House Surgeon, three years. 830 North Broadway, Baltimore.
- ZIEGLER, JOHN S. 1899. Born at Shrewsbury Township, York County, Pa., August 17, 1859. Educated at Gray's School, Glen Rock, Pa.;

MEDICAL AND CHIRURGICAL FACULTY

M.D., University of Maryland, 1878; has practiced ever since at Melrose, Md.

ZOLLER, CHRIST. G. E. 1831. See list of 1848.

*ZOLLICKOFFER, WILLIAM. 1817. Born in 1793. M.D., University of Maryland, 1818, and Washington University, 1838; Agent, Vaccine Institute, Baltimore, 1830; Lecturer on Botany, Medical Botany, Materia Medica and Therapeutics; resided at Uniontown, Carroll County, Md.; author of "A Materia Medica of the United States," etc., Baltimore, 1819 and 1827. Died in 1853.

CHRONOLOGY.*

1608. Europeans first visit the Chesapeake. In June, John Smith sets out from Jamestown, "in an open barge, neare three tons burthen," and with a crew of thirteen, to find a passage westward into the Pacific. They enter the Patapsco, which from the resemblance of the clay on its banks to "bole-armoniack" (*terra sigillata*) they call the "Bolus." On their return they sail up the Potomac. "Walter Russell, Gentleman, doctor of physicke," accompanied and wrote the history of this voyage (see "Smith's General History of Virginia," chap. v). In July Smith returns and makes a more thorough exploration of the Bay. He was now accompanied by "Anthony Bagnall, chirurgeon," who also wrote the account of this second expedition.

1632. Charter for Province of Maryland granted to Cæcilius, second Lord Baltimore, by Charles I. (June 20). Named in honor of Queen Henrietta Maria.

1634. First settlement of the Province by 200 colonists, at St. Mary's. They land March 27.—St. Mary's Town, formerly the principal town of the Yoamacoes, bought by Governor Calvert, brother of Lord Baltimore, who heads the expedition.

* Many of the early items of this Chronology were derived from the Maryland Archives.

MEDICAL AND CHIRURGICAL FACULTY

1635. First General Assembly meets at St. Mary's (February 26).—"Francisco, a molato," brought into the province by Andrew White; the first slave.

1637. Henry Hooper, chirurgon, arrives in Maryland.—Inquest by twelve planters on a man killed by a tree; they report his "bloud bulke broken," and the tree is forfeited to Lord Proprietor (January 31). This is probably the earliest recorded autopsy in America, the earliest in Massachusetts being 1674. Inquest also on two men drowned (March 23 and 24).

1638. Thos. Gerard, surgeon, arrives in Maryland, and takes up St. Clement's Manor, St. Mary's County, where he holds a manorial court.—"Our surgeons cure a man of snake bite" (Letters from missionaries appended to Father White's "Relation," p. 56, Maryland Historical Society, published 1874).—A law passed by Assembly to regulate "wages" and "moderate the charges" of artificers and chirurgons, according to the rates of tobacco in England.—Population of the Province, 700.—Second Assembly held January 25.—First Court of Justice held in the Province.—The Colonists commence the growing of tobacco.—A return of election of burgesses shows that only one of seven Colonists could sign his name.

1639. Gerard elected to Assembly; obtains 230 pounds of tobacco from the Secretary of the Province "for physick" administered to Richard Lee.—Mr. Wells, chirurgon of St. Mary's County.

1641. Richard Purlivant, barber and chirurgon, settles on Kent Island (Emory).

1642. Robert Ellyson, a "barber-chirurgon" of St. Mary's County.—Report of an "Enquest taken at St. Maries upon the

MEDICAL AND CHIRURGICAL FACULTY

view of the body of Ann Thompson," an infant.—Alexius Pulton, chirurgeon, paid 150 pounds tobacco for his services in expedition against Susquehannah Indians.—George Binx, licentiate in physicke.—On petition of the Protestants in the colony, Thomas Gerard is fined by the Assembly for interfering with their worship.

1643. Francis Otway, chirurgeon of expedition against Susquehannah Indians.—An "Enquest on an Indian ladd killed by John Dandy;" a complete examination of abdomen; report signed by "George Binx, foreman (February 23, see above).—Gerard, member of Council.

1644. Mrs. Hebden, wife of Dr. Thos. Hebden, of St. Maries, recovers a medical fee for "doing chirurgery upon the legg of a patient."—Thomas Gerard, member of Assembly, one of Governor's Council, and diligent in his efforts for the advancement of the Colony; a man of more than ordinary abilities (Bozeman).—Records of the Province seized and carried to Virginia, where most of them were lost.

Death: Dr. Robert Ward, of St. Maries.

1646. Dr. Waldron, of St. Maries River.

1647. Dr. Thos. Hebden recovers a judgment for medical fees, due him for curing a soldier of the "ffort" at St. Maries of "ague and feaver," and "stopping of the blood" from a wound received in a fight with the Susquehannahs.

1648. Henry Hooper sues his Lordship's attorney for his "sallary and chirurgery in the ffort of St. Inegoos" the last year, 3379 pounds of tobacco and 3 barrels of corn.—John Wade, chirurgeon, arrives in Maryland.—Inquest on man found dead at "Poynt Looke out."

MEDICAL AND CHIRURGICAL FACULTY

1649. Annapolis founded by persecuted Puritan Colonists from Virginia.—Religious Toleration Act passed by Legislature (April 21).—Charles County erected.—Charles I. beheaded; Charles II. proclaimed King by Governor Greene.

1650. "An Act concerning the registering of births, marriages and burials" passes session of 1650 (Bozeman, "History of Maryland," vol. ii, p. 407).—Anne Arundel County formed.—Henry Hooper enters into an agreement with the Governor to serve him "for a twelve month from this day in the quality of Chirurgeon, and the Governor is for it to find all druggs, and to find him with diett and lodgeing, and to allow him two-thirds of all the accounts which the Chirurgeon Shall earn by his practice in the Colony during the said time." He is also made captain of one of the four military companies.—John Wade sues estate of Thomas Medwell for professional services.

1651. Thomas Marsh, chirurgeon, of Kent County ("Old Kent," p. 21).—Dr. Waldron gives his opinion as to the death of a new-born child.

1652. Dr. Thos. Ward, of Kent County, fined 300 pounds of tobacco for cruelties to a servant.—A jury of matrons decides as to the alleged pregnancy of a murderess.—Peace made with the Susquehannahs.

Death: Dr. Thos. Hebden.

1653. Death: Dr. Henry Hooper.

1654. Calvert dies.—Calvert County erected.—Oliver Cromwell proclaimed Lord Protector by Governor Stone.—Dr. Peter Godson ordered by the Court to return 600 pounds of tobacco which he had reserved for "curing" Thos. Ager, when he had failed to do so.

MEDICAL AND CHIRURGICAL FACULTY

1655. Dr. Luke Barber migrates to Maryland and settles in St. Maries County about March 20.—Battle between Puritans and Royalists (March 26) at Providence (Annapolis); the former victorious. Dr. Luke Barber is sent ahead by Governor Stone on his march to Providence, with a proclamation addressed to the people of Anne Arundel County, and acts the part of peacemaker. He was a zealous friend of Lord Baltimore, and accompanies the Governor at the particular request of the latter. Dr. (Captain) Gerard is also in this battle and is taken prisoner. The Governor is defeated and wounded. Barber, it is inferred, had been either a surgeon or physician in the Lord Protector's army. The favor shown later to Lord Baltimore was probably owing largely to the personal influence of Dr. Barber with the Protector (Bozeman).—Dr. Peter Sharp, chirurgion (b. 1623, d. 1672) and a Friend, sues Dr. Peter Godson for malpractice in killing a patient, by "taking too much blood." The case is referred to men of skill and ability, to "judge of the action."

1656. A jury of matrons called in a case of alleged infanticide, and the following year in a case of supposed pregnancy.—Drs. Barber and Gerard, members of Governor Fendall's Council; the former receives 1000 acres of land from Lord Baltimore for his faithfulness.—Jacob Lumbrozo, a Jewish physician, arrives from Portugal and settles in Charles County (January).

1657. Inquest held on Henry Gouge at Patuxent by Rd. Maddokes and Emperor Smith, chirurgions, by order of Council. The head is "desected" by the chirurgions for the inspection of the Jury. The chirurgions are allowed a half hogshead of tobacco each as fee (September 24).—Dr. Barber appointed Deputy Governor by Governor Fendall, who goes to England.

MEDICAL AND CHIRURGICAL FACULTY

1658. A jury of women ordered by the Court of Kent County in a case of alleged infanticide. They render, through their forewoman, Mary Vickers, a verdict that the accused, "Hannah Jackson, is clear from the bearing and never had a child."—Dr. Peter Sharp, sued for failure to cure a sore leg, gains his fee in tobacco.—Wm. Helmsley, from England, settles in Queen Anne's County.—Dr. Barber surrenders office on return of Governor Fendall.—The Puritan Governor surrenders the Province to the Proprietor, his Lordship having been deprived of it for six years (March 24).—Dr. Jacob Lumbroso, a Jewish physician, accused of blasphemy, but escapes trial in consequence of the pardon accompanying the proclamation in favor of Richard, the son of the Lord Protector, which was issued a few days after the accusation ("Davis' Day Star," pp. 65-66).

1659. Baltimore County patented, population 1000; Dr. Francis Stockett its first delegate to St. Mary's (Allsop's "Maryland").—Dr. Baker Brooke, member of Governor's Council.—A jury of matrons decides as to the pregnancy of a woman convicted of a felony.

1660. Population of Province, 12,000.—Dr. Richard Tilghman, surgeon British Navy, with wife Maria Foxley, settles at "Hermitage," Talbot County, Md., on land granted by Lord Baltimore.—Assembly convenes at Gerard's house; Gerard found guilty of treason and sentenced to banishment and confiscation; later pardoned.

1661. A salary of 400 pounds of tobacco per month assigned to the surgeon of expedition against the Susquehannah Indians.—First County Court held in Baltimore County (July 20) at the house of Capt. Thomas Howell. Prior to this all the set-

MEDICAL AND CHIRURGICAL FACULTY

tlements were within the six counties, St. Mary's, Kent, Talbot, Calvert, Charles and Anne Arundel. The last included all the Western Shore till Baltimore County was established; then that took all lands north of Anne Arundel.

1663. Lumbrozo naturalized.

1665. Population of Province, 16,000.—Lumbrozo commissioned to trade with Indians.

1666. Death: Dr. Lumbrozo.

1667. White population of Province, 8140.

1668. "Cole's Harbour," on north branch of Patapsco, on which Baltimore was subsequently laid out, patented by Thos. Cole. Contains 550 acres, nearly equally divided by Jones' Falls.

1670. Dr. Baker Brooke, Deputy Lieutenant Governor of Province.—Autopsy by John Stansley and John Peerce, surgeons, on head of Benj. Price, killed by Indians (July 20).—Michael De Coursey and Richard Tilghman, physicians of Kent County.

1671. Act passed allowing 250 pounds of tobacco to coroners as fee for an inquest.—Dr. John Waterton, delegate to Assembly from Baltimore County.—Dr. Richard Tylman, Sheriff of Talbot County.—Population of Province, 20,000.

1672. Nicholas Oliver, "who is an apothecary by profession," a cousin and legatee of Dr. Peter Sharp, of Calvert County.

Death: Dr. Peter Sharp.

MEDICAL AND CHIRURGICAL FACULTY

1674. Dr. Baker Brooke, Surveyor-General of Province.—Dr. Jesse Wharton, member of Upper House at St. Mary's.—Dr. Jos. Watterton, delegate from Baltimore County.

1675. Dr. Richard Tilghman, of Kent County, petitions the Court for compensation for surgical attendance on George Hays, to cure "the bones of his cubit which had been lacerated and torn." It was granted.—Gideon Skates, chirurgion, in Harford (then Baltimore) County, buys "Swanson" and "addition to Swanson" (site of Joppa), from John Taylor.

1676. Dr. Christopher Gregory, surgeon of expedition against Indians.

1683. Dr. John Brooke, a delegate to Assembly from Calvert County.—Dr. John Stansley, Surveyor, St. Maries County.

1684. A witch executed, the only instance in Maryland.

1692. Dr. John Brooke, Judge of Provincial Court.—Dr. Mordecai Moore, of Calvert County, arrives in Maryland.—Shadrach Whitworth, chirurgion; the first mentioned in records of Cecil County.—Government of Maryland assumed by the Crown and Protestant Episcopal Church established; all Christian sects equally privileged till then.—Prince of Orange on throne.

1694. Dr. Simon Wootten, of Calvert County, a witness against Thomas Johnson, of same county, for Jacobinism [this Thomas Johnson an ancestor of Gov. Thomas Johnson].—The Court orders the burial of cattle, which had died in large numbers during the previous winter, to prevent sickness.—Seat of government removed from St. Mary's City to Annapolis (March 16).—Kent County Court orders that "by

MEDICAL AND CHIRURGICAL FACULTY

reason of a great and dangerous sickness in the neighboring Province of Pennsylvania, it is by this Court ordered that no person inhabiting in the county doe entertain any stranger traveling from any part out of this Province. And that no person inhabiting in this Countie may Travel into any part of Pennsylvania or the Territories thereunto belonging untill January Court next, upon pain and penaltie of being proceeded against according to Law in that case made and provided, and all constables are hereby required to notifie the inhabitants of their respective hundreds" ("Old Kent of Maryland," p. 338. Dr. Quinan remarks of this: "This is probably the first quarantine declared in the limits of Maryland, certainly the first issued by a Court").

1696. Dr. Francis Greenfield, of Calvert County, and Dr. Payne, of St. Mary's County, first appear in the records.

1697. The justices of Kent are required by their commission "to enquire into all sorts of Witchcraft, Inchantments, Sorceries, Magic Arts," etc. ("Old Kent," p. 391).

1698. Dr. Robt. Jones, of St. Mary's, first mentioned in the Records.—Mr. David Kuger and Zachary Allen, chirurgeons.

1700. Dr. Alex. Hamilton (Scotchman) settles at Annapolis about this time. He was preceptor of Drs. Thos. and Phineas Bond, of Philadelphia.

1703. Destructive hurricane in Maryland, destroying much shipping and property (October 18).

1706. Seat of justice of Baltimore County removed to Taylor's Choice, or Joppa, on Gunpowder River, and there remains above fifty years.

MEDICAL AND CHIRURGICAL FACULTY

1708. Dr. Gustavus Brown, of Scotland, educated at the University of Edinburgh, goes ashore from an English vessel, when, a storm arising, his ship is driven to sea, leaving him without clothing and with little money (May). But he is welcomed and entertained by the inhabitants, settles at Port Tobacco, Charles County, and marries the daughter of a wealthy planter.—Annapolis chartered as a city; called "The Athens of America."

1709. Dr. Edward Chetham, vestryman of St. Paul's Church, Talbot County.

1712. Population of Province, 46,075; Baltimore County, 2923.

1713. Drs. George Walker, A.M., and James Walker arrive from Scotland and settle in Anne Arundel County.

1715. Locusts appear in great numbers in Maryland.—Dr. George Walker removes to Baltimore County and purchases a tract of land west of the site occupied later by Baltimore Town, called "Chatsworth."

1717. Wm. Bruce Church, a practitioner of physicke in Calvert County ("Historical Collections Colonial Church in Maryland," p. 95).

1719. Population of Province, 80,000 (whites, 55,000).

1720. Dr. Josias Middlemore arrives in Baltimore County from England.

Death: Dr. John Rattenbury, in Baltimore County.

1721. Inoculation for smallpox introduced into England by Lady Mary Wortley Montague.

MEDICAL AND CHIRURGICAL FACULTY

1723. Dr. Geo. Buchanan, "chirurgion," arrives from Scotland, purchases land and settles in Baltimore County.

1724. James Walker, of Maryland, receives medical diploma at Aberdeen (see 1713) (October 7).

1726. *Maryland Gazette* established by Wm. Parks, public printer.

1729. Legislature passes an Act, entitled "An Act for erecting a town on the north side of Patapsco in Baltimore County, and for laying out into lots sixty acres of land in and about the place where one John Flemming now lives" (August 8). Flemming was a tenant of Mr. Charles Carroll and lived in a house situated near where Charles Street now is. Among the Commissioners named are Drs. George Buchanan and George Walker, the former being also a Justice of the County. The price paid Mr. Carroll for the ground was £ 120 (\$320). Dr. Walker purchases one of the lots, an acre each, into which the town site was divided. A large number of the first settlers of Baltimore County were Friends.

1730. The Commissioners lay off the town as provided (January 12). [Dr. Quinan remarks that at this date Philadelphia had been founded 48 years, Charleston 50 years, St. Mary's 96 years, Boston 100 years, and New York 116 years].—The streets of Baltimore Town were at first narrow and crooked. The principal one, "Long" (now "Baltimore"), was 4 perches wide and at times impassable. "Forest" ("Charles") Street was 3 perches wide. Most of them were mere lanes 1 perch wide. The low ground about Jones Falls was subject to frequent overflow and was called "The Meadow." For many years the town was surrounded by a picket fence to

MEDICAL AND CHIRURGICAL FACULTY

protect it from the Indians; there was a gateway for carriages at the north end of Gay Street and another at the west end of Baltimore Street, and a smaller one for foot passengers on the hill near St. Paul's Church (1750).

1731. Smallpox at Joppa, Baltimore County. Courts suspended.

1732. Dr. George Walker assists in laying off "Jones Town," on the east bank of the Falls, "where Edward Fell kept store" (August).

1736. Dr. Buckler Partridge arrives and settles at Jones Town.

1738. Dr. Adam Thomson, of Maryland, begins to inoculate by a new method, the "American" (see 1750).

1740. First brick house erected in Baltimore Town with imported material (northwest corner Calvert and Fayette Streets); also, first house of two stories without a hip-roof.

1743. Death: Dr. George Walker, at Baltimore.

1745. Dr. Geo. Buchanan, a delegate to the General Assembly from Baltimore County.—About this time Dr. Richard Brooke sends a memorial to the President of His Majesty's Council, complaining that the Lord Proprietor unduly favors the Catholics in the Province (Md. Archives).—John and Henry Stevenson (brothers) arrive from Ireland; the first engages in commerce, the second pursues his profession.—The *Maryland Gazette*, second publication, is issued at Annapolis (January 27).—The Tuesday Club organized at Annapolis by

MEDICAL AND CHIRURGICAL FACULTY

Dr. Alex. Hamilton and Mr. Jonas Green, editor of *Maryland Gazette*. The oldest club in the United States. Dr. Hamilton was the founder, "life and soul," and the first meeting was held at his house (May 14).—The two towns, "Baltimore Town" and "Jones Town," are united into one, for which the former designation is retained (September 5).

1746. Dr. William Lyon establishes the first drug store at Baltimore Town (corner Baltimore and Calvert Streets), for the sale of "chemicals and Galenicals."

1747. Dr. Lyde Goodwin's name appears in the records of Baltimore Town.—Dr. Andrew Scott, of Prince George County.

1748. Dr. Wm. Lyon subscribes to keep the town fence in repair.—Malignant smallpox in Cecil County (January).

1750. "Whereas several persons permit stinking fish and dead creatures or carrion to lie on their lots, or in the street near their doors, which are a very offensive nuisance and contrary to Acts of Assembly, the Commissioners therefore order the clerk to put up advertisements to inform such persons that they are to remove the same. *Resolved*, That Dr. Wm. Lyon be a committee of one to enforce the same." (MS. Rec. of Baltimore. This is the first health ordinance of the town extant).—Dr. Adam Thomson, a Marylander, publishes the "American Method of Inoculation," which was universally adopted throughout the Colonies and favorably received in England.

Death: Dr. George Buchanan, æt. 52.

1751. In an old map of this date the words "Baltimore Iron Works" mark the site of the City of Baltimore.—Pennsylvania

MEDICAL AND CHIRURGICAL FACULTY

Hospital at Philadelphia projected, incorporated and organized by Dr. Thomas Bond, of Calvert County, Md.; opened 1752.—First Theatre built at Annapolis.—Dr. Alex. Hamilton, of Annapolis, defends Dr. A. Thomson's "Method of Inoculation."

Death: Dr. James Somervell, of Calvert, February.

1752. Baltimore Town has twenty-five houses, four of which are of brick, and two vessels, a brig and a sloop.—Dr. Wm. Lyon subscribes for a market-house and town hall.—Letter of Dr. Richard Brooke, on "Inoculation Without Incision" (Philosophical Transactions, 1752, vol. xlvii).

1753. Population of Baltimore County (including Harford), 17,238.

Death: Dr. Edward Wakeman, chirurgion, of Baltimore County.

1754. Dr. Richard Murray, of Dorchester County, appointed Commissioner to Choptank Indians.—Letter from Dr. Richard Brooke, on "History and Appearance of the Pheasant as seen in Maryland" (Philosophical Transactions, 1754, vol. xlviii).

1755. Dr. Charles Frederick Wiesenthal arrives at Baltimore from Germany.—Smallpox epidemic in the State.—Thermometric account of weather, September, 1753, to September, 1754, by Dr. Richard Brooke (Philosophical Transactions, 1755, vol. li).—First fire engine brought to Colonies reaches Annapolis from London.—Dr. Swinton, Surgeon, killed and five Surgeon's Mates wounded at Braddock's defeat. After this defeat people fled to Baltimore for safety. Indians said to be within 80 miles of the town. Women and children put

MEDICAL AND CHIRURGICAL FACULTY

on boats in the harbor for flight down the Bay, if necessary (July 9).

Deaths: Drs. Josias Middlemore, in Baltimore County, February 27, æt. 72; Charles Carroll, of Annapolis.

1756. Population of Baltimore Town, 300, with four physicians.—Dr. John Bond, of Calvert County, a pupil of his uncle, Dr. Thos. Bond, of Philadelphia, and apothecary to Pennsylvania Hospital.—Spotted fever epidemic in Maryland; epizootic among dogs and foxes; all attacked die (May) (R. Brooke, *Philosophical Transactions*).—Dysentery and smallpox epidemic in Maryland (November and December) (*Id.*).

Deaths: Drs. Alex. Hamilton, of Annapolis; James McGill, of Harford County.

1757. Dr. Samuel Owings, Delegate to General Assembly from Baltimore County.—A malignant fever prevails in Maryland, but confined to colored race (R. Brooke, *op. cit.*).—Epizootic among horses; all near salt water die (*Id.*).—For the first and only time Legislature meets at Baltimore Town in consequence of prevalence of smallpox at Annapolis (April 5); epidemic over July 24 after raging about 9 months. The session lasted about a month. The Governor appoints August 12 as a day of “fasting, humiliation and prayer.”

1758. Dr. John Bond (see *antea*) Surgeon in French and Indian War (Pa. Archives).—The General Assembly of Maryland allows its Surgeons and Surgeon's Mates ten shillings per day for services in the War (Proceedings).

1759. Mr. Steiger, a butcher, purchases of Dr. Wm. Lyon, the wooded marsh in the bend of the Falls for a pasturage.—The people kept from going West by the French and Indian

MEDICAL AND CHIRURGICAL FACULTY

War.—Baltimore Town the greatest mart of trade in the province.—Smallpox at Bladensburg.—Thermometric Account of the Weather for three years, 1751-54, by Dr. R. Brooke (Philosophical Transactions, 1759).

Death: Dr. James Walker, of Anne Arundel County.

1760. Smallpox in Cecil County.

1762. Smallpox epidemic in the State.—Dr. Richard Brooke reports “A Case of Hydrophobia; Good Effects of Bleeding and Mercury” (*Maryland Gazette*, November 4).

1763. Drs. H. Stevenson and Lyon aid in founding a Presbyterian Church on East (now Fayette) Street.—Drs. Wm. Lyon and others lease a lot, at northwest corner of Gay and Baltimore Streets, for a market house.—Dr. George Garnet, a practitioner in Queen Anne’s County and vestryman of Old Chester Church.—Dr. James Sparrold, of Baltimore, taxed as a bachelor.—Addition to Old Town, or Jones Town, laid out.—“Ancient and Honorable Mechanical Company” of Baltimore organized (September 22); this association is still in existence with an unbroken career since its foundation. It is said to be the oldest civic organization in the United States.

1764. A malignant fever prevails in Talbot County, confined to negroes (*Maryland Gazette*, July 12).

1765. Dr. John Jackson, of Queen Anne’s County, vestryman of Old Chester Church.—Dr. Henry Stevenson, who is styled “the most successful inoculator in America,” opens an inoculating hospital at Baltimore (February) and visits Prince George County, Md., to inoculate the inhabitants (July 29, *Maryland Gazette*).—Smallpox epidemic prevails in the State from March 1, 1764, to September, 1765.

JOSHUA I. COHEN

1801-1870.

MEDICAL AND CHIRURGICAL FACULTY

1766. First State Quarantine Law passed (Chapter 22).—Smallpox at Joppa, Baltimore County.—Dr. Lodman (?) Elbert, of Queen Anne's County, vestryman of Old Chester Church.—Dr. H. Stevenson "informs the public that £400 have been collected in town and county towards purchasing a genteel statue of William Pitt, in acknowledgment of his services to the Province and Continent, and to lovers of liberty in general" (May 22, *Maryland Gazette*).

1767. Dr. Randall Hulse arrives from England and settles at Garrison Forest, Baltimore County (March 12).—Dr. John Boyd establishes a drug store at Baltimore Town, the second here (May).

1768. Drs. John and Thomas Cradock, pupils of Dr. Hulse, begin practice in Baltimore County.—John Archer, of Harford County, Md. (then Baltimore County), receives from the Philadelphia College the first medical diploma (M.B.) ever granted after attendance in America (June 20); this diploma, as also his Princeton diploma, is in the possession of the Medical and Chirurgical Faculty.

Deaths: Drs. John Hamilton, of Calvert County; Adam Thomson, of Prince George County.

1769. First fire engine at Baltimore.—Quarantine Law passed.—Drs. John Doncastle and James Craig, of Charles County.—A jury of matrons acts under writ "*de ventre inspiciendo*," in the case of a woman who pleads pregnancy in bar of execution (Proceedings of Council, 1767-70, p. 43).—Dr. Henry Stevenson devotes part of his mansion, "Parnassus," on little York Road, in rear of present jail, to the purpose of an inoculating hospital, and opens it to all who apply (February 15, *Maryland Gazette*).

Death: Dr. Joshua Warfield, March 19.

MEDICAL AND CHIRURGICAL FACULTY

1771. Dr. Philip Henderson in Baltimore County.—John Stevenson begins the shipment of wheat to Europe; the formation of the grain trade of Baltimore.—Dr. Henry Stevenson advertises his hospital, where inoculation is conducted after the best “American method” (November 14, *Pennsylvania Gazette*).

1772. Dr. Michael Pue arrives from Ireland.—David Ramsay, the historian, graduates M.B. at the Philadelphia College and practices for a short time in Cecil County before removing to Charleston, S. C.—The practicing physicians at and near Baltimore Town are Drs. Lyon, Wiesenthal, Hulse, Stenhouse, Pue, Stevenson, Boyd, Cradock, Hazlett, Gray and Coulter.

1773. Legislature passes Act for erection of a Poor and Workhouse in Baltimore County for the sick and indigent, and appropriates £4000 for the purpose. Centre building and east wing erected on North Howard Street.—Harford County formed by division of Baltimore County.—Dr. C. F. Wiesenthal aids in erection of a Lutheran Church.—State Quarantine Law passed.—Fells Point added to Baltimore Town.—Publication of *Maryland Journal and Baltimore Advertiser*, begun by William Goddard, the first newspaper at Baltimore (August 20).

1774. Drs. Hulse, Wiesenthal, Cradock and Hazlett physicians for the poor of Baltimore County.—Dr. H. Stevenson, Inspector of Tobacco.—Charlotte Hall Academy established.—First military company organized at Baltimore for the Revolution, by Mordecai Gist, a merchant.—Drs. John Archer, Robert Lemon, Josias Carvil Hall and Thomas Andrews on the Committee of Observation of Harford County; Dr. John

MEDICAL AND CHIRURGICAL FACULTY

Boyd on same Committee for Baltimore County and Town.—Drs. Ephraim Howard, of Anne Arundel County; Thomas Cradock, of Baltimore County; Richard Brooke, of Frederick County; M. Wallace, of Queen Anne's County, and Nathaniel Potter, of Caroline County, elected members of State Convention.—Drs. Wiesenthal and Howard discuss in the paper the treatment of a patient, and Dr. William A. Dashiell defends the views of his preceptor, Dr. Wiesenthal.—The "Peggy Stewart," laden with tea, burnt at Annapolis (October 19), Dr. Charles Alexander Warfield, of Howard County, leading the party, "the first overt act against the authority of the King of England in Maryland."

1775. James McHenry, "having made some progress in medicine," is appointed Surgeon and with others joins the patriot army before Boston.—Baltimore fits out two cruisers, "Hornet" and "Wasp," to make the first essay of the American Navy.—First Frigate built for Continental Navy at Fells Point, Baltimore.—First Continental flag hoisted in Maryland by Commodore Barney.—Dr. John Wallace, of Queen Anne's County, member of State convention.—Dr. Moses Allen, member of Committee of Observation of Talbot County, and Drs. Samuel Owings and John Boyd on same Committee for Baltimore County.—Drs. John L. Elbert, Samuel Stringer Coale, Christopher Taylor and Frederick Ridgeley begin practice.—Census of Baltimore taken by the inhabitants early in the year: 564 houses, 5934 inhabitants, 16 physicians.—Physicians to Poor appointed.—Twenty acres at head of Howard near Madison Street bought for site of County Poorhouse, at a cost of £ 350.—Smallpox at Queenstown, Queen Anne's County.—Dr. John Smith, Surgeon of Colonel Conolly's expedition, planned by Governor Dunmore of Virginia, arrested at Fredericktown.

MEDICAL AND CHIRURGICAL FACULTY

—Dr. Ephraim Howard, son of Henry, paid £600 and Dr. Samuel S. Coale paid £250, for manufacture of saltpetre, by Committee of Safety.

1776. Dr. Wiesenthal appointed by State Surgeon of Smallwood's Brigade. The same ordered to buy for his command thirty pounds of bark, two pounds of cantharides, one pound of sponge and four ounces of opium.—Dr. John Boyd and others authorized by Congress to sign bills of credit.—Drs. Thomas Andrews and John P. Ahl begin practice; the first on Committee of Safety.—Dr. John Coulter, Acting Surgeon at Baltimore, vice Wiesenthal, while the latter visits the Maryland troops in camp.—Dr. Thomas Andrews appointed by State "prover of arms."—Inoculation stopped in accordance with the order of the Committee of Observation of Baltimore, and the approval of Drs. Wiesenthal, Patrick Kennedy, H. Stevenson and William Beard.—The medical stores of Dr. Alexander Stenhouse, a loyalist of Baltimore County, valued at £422, taken by Committee of Safety for the use of the Army.—Dr. Benjamin Kennedy paid for medicines supplied troops of Western Shore.—Council of Safety forbid the slaughtering of cattle at Baltimore for three months for sanitary reasons.—Dr. Thomas Bourke, Captain of Cambridge Blues.—Smallpox at Port Tobacco, Charles County.—Drs. Henry Stevenson and Patrick Kennedy disapprove of the extreme measures of the patriots and leave Baltimore, the former entering the British service at New York as Surgeon, the latter becoming Captain of a company of loyalists.—Population of Baltimore, 6755, with 19 physicians; population of Fells Point, 812. Population of Harford County, whites, 9421; blacks, 3342.—Dr. Wiesenthal appointed by State Manufacturer of Saltpetre and publishes his method of manufacture (January

MEDICAL AND CHIRURGICAL FACULTY

4, *Maryland Gazette*).—Drs. Wiesenthal, Boyd and Cradock issue a call on the ladies of Baltimore for lint and linen for bandages for the troops (March 12).—Drs. Gustavus R. Brown and James Wallace establish an inoculating hospital in Charles County (June 15, *Virginia Gazette*, Williamsburg, June 28).—Declaration of Independence proclaimed at Court-house at Baltimore Town, with firing of cannon and in evening illumination; effigy of “late” king paraded and burned (July 22).—Almshouse at Baltimore burnt down, but rebuilt and west wing afterwards added (September 18).—Congress assembles at Baltimore Town in Mr. Jacob Fite’s house, south-east corner of Baltimore and Liberty Streets, then the farthest house west, and one of the largest in the town; it was long called “Congress Hall.” Here, on December 27, Washington was invested with dictatorial powers.

1777. Dr. Hall, of Cecil County, paid £150 by Committee of Safety for his services to the troops there.—Smallpox at Cambridge, Md.—Dr. Samuel Mackenzie, of Baltimore, ordered by Congress to furnish medicines to sick soldiers at Baltimore and is paid \$1500 for the same (*Journal of Congress*).—Quarantine Law passed.—Dr. Wiesenthal, Surgeon-General of Maryland troops at a salary of thirty-five shillings per day without rations.—Surgeons of regiments to receive \$60 per month and Surgeon’s Mates \$32 per month with rations.—The Military Hospital for Maryland troops at Annapolis burned.

1778. Dr. Richard Burgess, Surgeon-Major to Colonel Marbury’s Battalion.—Dr. Edward Johnson ordered to let Dr. James Craig have 250 pounds of bark; also to sell 400 pounds of the bark lately imported by Captain Conway’s Privateer,

MEDICAL AND CHIRURGICAL FACULTY

“Molly,” at £4 per pound, not selling more than two pounds to a family, nor more than eight pounds to a physician.—Dr. John Troup returns after seven months’ absence in France and is obliged to take the oath of allegiance.—Dr. Richard Tootel to deliver to Hon. Thomas Stone one pound of “jallop” for use of persons undergoing inoculation in Charles County; also to deliver to Dr. Warfield, of Anne Arundel County two pounds of bark, one-half pound of camphor, two drachms of opium, one-half pound of copaiba, one pound of jallop, five pounds of sal. cathart., one-half pound of calomel prep., and one-half ounce of arg.-nitr.—Dr. James McHenry becomes Secretary and Aide-de-Camp to the Commander-in-Chief, General Washington.

1779. Drs. John Labesius and Joseph Harrison begin practice.—Dr. John Johnson pays £250 for camphor for the State shop at Annapolis.—Drs. Wiesenthal, Hazlett, Boyd, Thomas Andrews, Coale, Ridgeley, William Beard and Labesius, agree upon a fee table in accord with the high prices of the necessaries of life, the poor to be attended gratis.—The ensuing winter intensely cold; \$9000 given by the citizens for the relief of the poor.

1780. Dr. Patrick Sim Smith, Medical Purveyor for the Army in Calvert County, and Dr. H. Schnebly the same for Frederick County.—Dr. James Steuart removes from Annapolis to Baltimore.—Dr. John Parran, of Calvert County, paid £170 by the Committee of Safety for his services.—First Theatre at Baltimore.

Death: Dr. William Augustus Dashiell.

1781. Military Hospital at Baltimore under charge of Dr. Wiesenthal.—The Governor and Council issue orders to Drs.

MEDICAL AND CHIRURGICAL FACULTY

Murray, Tootel and Steuart to cease inoculating.—Almshouse of Anne Arundel County used as a military hospital.—The forces at Annapolis inoculated by Dr. James Murray (April).—General Washington, Count Rochambeau, General Viomenil and others pass through Baltimore, which is illuminated in honor of the event. Address to Washington and his reply (September 8).—Dr. James McHenry taken prisoner at Battle of Eutaw, S. C. (September 8), but released and elected member of Maryland Senate in December.

1782. Population of Baltimore estimated at 8000, with 8 churches and 23 physicians.—Dr. Henry Keerl, Hessian Surgeon, captured at Trenton, settles at Baltimore.—Drs. Randal Hulse and Thomas Love, of Baltimore County, employ the trepan with relief, in the case of a child who has received an injury of the head (*Boston Evening Post and General Advertiser*).—Dr. Hulse leaves for England never to return.—Dr. John Cradock, member of House of Delegates.—First line of stage coaches established between Baltimore and Philadelphia.—French troops returning from Yorktown encamp at Baltimore till close of War.—Streets of Baltimore paved for the first time.

1783. Washington College, Chestertown, established.—Dr. George Brown arrives from Ireland.—Among the physicians of Baltimore are Drs. Johnson, Goodwin, Troup, Andrews, Coale, Gilder, Brown, Littlejohn, Ross, Buchanan and Wiesenthal.—Dr. James McHenry, Member of Congress.—Dr. Lyde Goodwin, Judge of Orphans' Court.—Regular line of coaches from Baltimore to Frederick City and Annapolis.—Amount expended in paving the streets of Baltimore, £9952.—Conclusion of peace celebrated; Baltimore illuminated

MEDICAL AND CHIRURGICAL FACULTY

(April 21).—Dr. Lyde Goodwin, Judge of Orphans' Court (May 16).—Public dinner to General Greene at Baltimore; addresses (September 30).—British evacuate New York.—Thanksgiving throughout the country.—Public dinner to Washington on his way to Annapolis to resign his commission, Congress having met there on account of threatening attitude of Pennsylvania soldiers; addresses.

Deaths: Drs. Thomas Andrews; Richard Brooke, of Prince George County, July 13, æt. 67.

1784. Dr. C. F. Wiesenthal, physician to German Society.—Winter very severe; the harbor of Baltimore closed from January 2 to March 25, the Bay frozen almost to its mouth.—James Rumsey, a native of Cecil County, patents a steamer.—First circulating library established at Baltimore by Wm. Murphy, Market Street, one door east of Calvert.—Scarlet fever epidemic.—State Quarantine Law passed.—Dr. Ephraim Howard, of Elkridge, establishes an artillery forge there.—Baltimore streets first lighted; three constables and fourteen watchmen guard the town.—St. John's College organized at Annapolis.—First M. E. Church in the United States organized at Baltimore, Thomas Asbury being the first Bishop.—Lafayette entertained at public dinner; addresses. Legislature declares him and his male heirs citizens of Maryland forever (September 1).

1785. Bishop Andrews ordained.—An autopsy made by M. Mann criticised (January 11).—Medical reform and suppression of quackery discussed in the paper (November 21, December 13 and 23).

Deaths: Drs. John Stevenson, the founder of the Commerce of Baltimore, æt. 67; Ephraim Andrews.

MEDICAL AND CHIRURGICAL FACULTY

1786. Dr. Henry Stevenson returns to Baltimore and resumes inoculation.—Dr. Samuel Owings, member of House of Delegates.—Dr. Josias Carvil Hall, member of Governor's Council.—Reform still discussed (February 2).

Death: Dr. Wallace Hanson Jenifer, of Charles County, æt. 34.

1787. Population of Baltimore, estimated, 9775, physicians, 25.—Dr. Reuben Guilden, who had been Surgeon throughout the War to Hazlett's Regiment (Blue Hen's Chickens) settles at Baltimore.—Dr. John Scott appointed Naval Officer of Eighth District, Eastern Shore.—Stage route established between Baltimore and Annapolis; tri-weekly trips.—Baltimore has the first land carriage propelled by steam in the world.—Grand Lodge A. F. & A. M. founded at Talbot Court House (April 17).

1788. Society for promoting "abolition of slavery and for relief of free negroes and others unlawfully held in bondage" organized at Baltimore, and building for school erected in Sharp Street.—New channel cut for Jones Falls, Baltimore, "from the lower mill at Bath Street across the meadow to Gay Street Bridge. Old course by the Court House gradually filled up."—The body of Patrick Cassidy, an executed murderer, given to the doctors for dissection, but forcibly taken from them by a mob ("Griffith's Annals").—"Benevolus" urges the people of Baltimore County and Town to secure a law restricting the practice of medicine to those duly qualified (July 2).—Dr. C. F. Wiesenthal, President, issues an appeal to the physicians of the State to convene on the 15th inst., at Stark's Tavern, Baltimore, to digest a plan for the regulation of medical practice (December 11).—Dr. Elisha

MEDICAL AND CHIRURGICAL FACULTY

Hall addresses Dr. Wiesenthal to the same effect (December 13).—A medical society organized, President, Dr. Wiesenthal; Secretary, Mr. Frederick Dalcho; Drs. Boyd, Goodwin, Brown, Guildler and others members (December 16).—Dr. Elisha Hall addresses the Medical Society of Baltimore on the regulation of the practice of physic, and sketches a plan for a State Medical Society, which embraces the chief features later embodied in the charter of the Medical and Chirurgical Faculty (December 26.)

1789. Physicians at Baltimore, 29.—Influenza epidemic during fall and ensuing winter.—Drs. George Buchanan, grandson of George Buchanan, the emigrant; Edward Johnson, Thomas Johnson, Andrew Wiesenthal, Miles Littlejohn and James Wynkoop begin practice at Baltimore.—The first General Council of the Catholic Clergy in America is held at Baltimore.—Dr. George Buchanan publishes his "Treatise on Typhus Fever," with the purpose of establishing a Lying-in Hospital at Baltimore (this is the first medical monograph of a Baltimore physician published).—Drs. S. S. Coale, Andrew Wiesenthal, George Buchanan, Reuben Guildler, James Wynkoop, Edward Johnson, George Brown and Miles Littlejohn appointed physicians to Almshouse (September 11).—The Medical Society reorganized, with Dr. Edward Johnson President; Andrew Wiesenthal, Secretary, Treasurer and Librarian; John Boyd, R. Guildler, George Buchanan and George Brown, Court of Correspondence (November 6, "Griffith's Annals").—St. John's College, Annapolis, opened and dedicated (November 11).—Dr. Buchanan delivers lectures on Diseases of Women and Children and on the Brunonian System to a class of nine students (December 6, *Maryland Journal and Baltimore Advertiser*), and Dr. Andrew Wiesenthal on Anat-

MEDICAL AND CHIRURGICAL FACULTY

omy, Physiology, Pathology, Operative Surgery and the Gravid Uterus, to fifteen students, at his house, No. 40 North Gay Street (same date, *Maryland Gazette*).

Deaths: Drs. Charles F. Wiesenthal, June 1, æt. 63; Ephraim Howard.

1790. First Census by General Government. Population of State, 319,728; of city, 13,503, with 30 physicians.—Influenza epidemic throughout the country (fall of 1789 to spring of 1790); some called it an "epidemic putrid cold."—Bank of Maryland chartered with \$300,000 capital; \$200,000 of this raised in fourteen days; exorbitant dividends.—Baltimore owns 102 vessels with 13,564 tons.—A Mrs. Reitman gives notice that "having duly qualified as a midwife, she hopes in so prolific a town as Baltimore, to get patronage."—Dr. George Buchanan urges the registration of deaths, the creation of a public park and, in conjunction with Drs. Wiesenthal, Coale, Wynkoop, Stevenson, Littlejohn, Moore Falls and Hazlett, appeals for a Humane Society.—Complimentary notice of lectures of Drs. George Buchanan and Andrew Wiesenthal, by their pupils; "hope it may prove the beginning of a permanent medical school" (March 16).—The Faculty of Medical School announced, viz: A. Wiesenthal, Anatomy; George Brown, Medicine; Lyde Goodwin, Surgery; S. S. Coale, Chemistry and Materia Medica; George Buchanan, Midwifery (*New York Daily Advertiser*, April 10).—First Session of United States Circuit Court held at Baltimore (May 7).—Controversy on Dissolution of Medical Society of Baltimore (June 22 and 29, July 1, 2, 6, 9, 16).—Dr. Elisha Hall resuscitates a drowned man; necessity of a "Humane Society" pointed out (August 9).—Rev. John Carroll, Vicar-General of

MEDICAL AND CHIRURGICAL FACULTY

Catholic Church in America, consecrated first Catholic Bishop in the United States (August 15).

Deaths: Drs. John Boyd, February 4, æt. 53; Jos. Harrison.

1791. Dr. Wesley Baker begins practice.—General Inoculation in Kent County.—Dr. George Buchanan delivers an oration on “The Moral and Political Evils of Slavery” (July 4).—St. Mary’s Seminary founded, at corner of Franklin and Greene Streets, Baltimore (July 10); the first Catholic Seminary for theological students in the United States.

Death: Dr. Buckler Partridge.

1792. Yellow fever at Philadelphia; Drs. John Ross and John Worthington appointed by Governor Lee, Quarantine Physicians, the former by sea, the latter by land.—Poor Relief Association incorporated.—First Water Company in the United States formed at Baltimore.—Almshouse grounds increased by the purchase of ten additional acres at a cost of £167 (used as a cemetery when Howard Street was extended in 1802).—Rev. Thomas J. Clagett ordained first P. E. Bishop of Maryland (September 17).—First Regular General Conference of M. E. Church held at Baltimore (November 1).

1793. Drs. Henry Wilkins and Thomas Drysdale begin practice.—One thousand whites and five hundred blacks fleeing from massacre in St. Domingo, seek refuge at Baltimore; \$12,500 raised for their relief.—Quarantine proclaimed by Governor Lee against all infected places. Passengers and baggage from Philadelphia not allowed to enter the city until passed by Quarantine Physicians.—Board of Health reports Baltimore free from yellow fever.—A Philadelphian expresses indignation because he is stopped en route to Baltimore and

MEDICAL AND CHIRURGICAL FACULTY

offered toasted cheese on the end of a pitchfork by the Quarantine guard.—Citizens of Baltimore subscribe £861 for the relief of yellow fever sufferers at Philadelphia.—Chestertown and Havre de Grace declare quarantine against Philadelphia (September 12-27).—Hagerstown Board of Health, Drs. Samuel Young, Jacob Schnebley and others, does the same.—The Legislature authorizes a temporary hospital for seamen of infected vessels to be erected at Baltimore (October 13, Chapter 57).

1794. Dr. Thomas Drysdale appointed by the Governor, an additional Quarantine Physician.—Yellow fever at Philadelphia and Baltimore.—Dysentery epidemic.—Star Fort of brick erected on Whetstone Point and called Fort McHenry, in honor of Dr. James McHenry, Secretary of War; afterwards ceded to the United States Government.—Site of hospital selected by Captain Yellot and others to serve as a temporary retreat for strangers and seafaring men.—Potter's Field purchased opposite hospital.—Grand Lodge, A. F. & A. M. holds its first meeting at Baltimore.—New Board of Health proposed (February 21).—Dr. Drysdale delivers oration on Slavery (July 4).—Drs. Ross, Worthington and Drysdale ordered by Governor Lee to stop *all* vessels at quarantine. City authorities charged with negligence in allowing the admission of yellow fever (July 8).—Drs. Coulter, Brown and Goodwin report the existence of "malignant bilious fever" at Fells Point (August 13).—Dr. Ross defends Board of Health, but suggests the necessity of a guard at Whetstone Point and erection of a temporary hospital (August 15).—Board of Health reports city free from malignant disease and admits only 344 deaths in August and September. Philadelphia decides on non-intercourse with Baltimore (October 1).—

MEDICAL AND CHIRURGICAL FACULTY

Baltimore remonstrates (October 3).—No more cases reported (October 16).—Drs. Goodwin, Johnson, Wilkins, Hazlett and others certify the good health of the city (October 23).—The Board of Health of Baltimore sends report of epidemic to the New York Board (October 28).

Deaths: Drs. John Cradock, æt. 45; Moses Dorling, æt. 60; John Griffin, æt. 24; William Lyon, æt. 66.

1795. Exports of Baltimore increase from \$1,699,930 in 1790-91, to \$4,421,924 in 1794-95.—Dysentery epidemic at Baltimore.—Legislature passes an Act for the appointment of a health officer of the Port of Baltimore at a salary of \$100.—Peruvian Bark eighteen shillings per pound; red bark \$4 per pound.—Dr. George Brown and others found the Baltimore Library, since merged with the Historical.—Bank of Baltimore chartered, capital \$1,200,000.—Board of Health of city elected (April 24).—The inhabitants petition the Legislature for Quarantine Act and appropriation (May 5).—The Board of Health adopts rules for regulation of quarantine and appeals to citizens to aid in their enforcement (May 7).—Hospital at Hawkins Point ready to receive the sick coming from infected ports; costs \$2840, of which the citizens contribute \$2119.75; physician's salary \$100 (June 18).—All vessels from South America or West Indies to be quarantined (July 29).—No hides to be landed from vessels within city limits (August 16).—Cokesbury College, erected in 1785 by the Methodist Society at Abingdon, Harford County, destroyed by fire (December 4).

Death: Dr. Michael Pue, æt. 53.

1796. Dr. Andrew Wiesenthal appointed Judge of Orphans' Court.—Drs. John Beale Davidge, Nathaniel Potter

MEDICAL AND CHIRURGICAL FACULTY

and John Crawford begin practice at Baltimore.—Patent taken out for antibilious pills; the first for quack medicine in America (Q.).—First Directory of City issued.—Methodist Academy and Free School founded.—Charitable Marine Society organized.—Baltimore Library incorporated and opens on Lemon Street (October 22).—Baltimore incorporated as a city (December 31).

Death: Dr. Moses Hazlett, æt. 57.

1797. Yellow fever epidemic.—Dr. Joseph Brevitt announces that “he has undertaken the specialty of midwifery” at Baltimore, and “having been educated under European professors, is fully qualified to undertake the Branch.” “He denies the use of forceps and all other instruments in natural cases.”—Frederick City College organized.—Taxable property of city, £700,000 in round numbers.—Harford Medical Society founded at “Medical Hall,” Harford County, by John Archer, M.B., and his pupils (April 1).—Board of Health organized.—City Council passes ordinance to prevent introduction of pestilential diseases and orders closure of theatres (April 7-25).—Dr. Andrew Wiesenthal discovers the parasite of tracheo-bronchitis in fowls (May 1, *London Medical and Physical Journal*, October, 1799).—Drs. Falls, Davidge and Goodwin report existence of bilious remittent fever at Fells Point (August 29).—Dr. Joseph Allender warns the Board of Health that a malignant epidemic prevails and urges the members to inspect the Point themselves (September 2).—Subscription opened for distressed inhabitants of Philadelphia (September 7).—Board of Health establishes a temporary encampment for the sick north of the City Hospital site and assigns Drs. Joseph Way and James Smith as attending physicians (September 16).—Annapolis declares quar-

MEDICAL AND CHIRURGICAL FACULTY

antine against Baltimore (October 9).—Dr. Andrew Wjiesenthal advertises to give lectures on Anatomy and Surgery. "Fees for course: for graduates, \$24; those attending last year will have the same privilege again by paying the difference between an ordinary ticket and \$24; students attending three courses, on paying \$40 will have a perpetual right" (October 11).—A physician reports that he has taken 130 ounces of blood, given 356 grains of mercury and rubbed in 12 ounces of mercurial ointment in a patient with yellow fever (October 26, *Federal Gazette*).—Legislature passes an Act to authorize the erection at or near Baltimore, of a hospital for the indigent, sick and insane and makes an appropriation of \$8000 therefor (this was the City, Public or Maryland Hospital on North Broadway).—Dr. Henry Stevenson reports 67 cases of yellow fever treated by him from July to October with but six deaths. His treatment no venesection, little calomel and free use of tonics (November 2, *Federal Gazette*).—Gen. Washington, in anticipation of war with France, reviews troops here (November 7).

Deaths: Drs. Edward Johnson, formerly of Calvert County, æt. 60; B. Dobell; Day, of Harford County; Aquila Durham, of Harford County, September 4, æt. 57.

1798. Yellow fever epidemic at Philadelphia.—Dr. Henry Wilkins establishes a drug store at No. 6 South Street.—A new and malignant fever prevails in the western part of the State ("Medical Repository," vol. iv, 351).—The City Council directs a committee, consisting of Mayor Calhoun and Messrs. Yellot, Lawson and McKim, to select a site and authorizes the purchase of $6\frac{3}{4}$ acres for the City Hospital for \$600. Building begun (February 20).—Health ordinance adopted (March 2).—Maryland Society for promoting Useful and

MEDICAL AND CHIRURGICAL FACULTY

Ornamental Knowledge, founded on the proposal of Mr. James Priestley, of Baltimore, seconded by General Stone, Dr. Crawford, Rev. Mr. Bend, and Messrs. James Carroll and John Kilty; first meeting held May 10; constitution adopted December 13; last recorded meeting in minute book, March 28, 1806.—Quarantine against New York and Wilmington, Del.; hides and coffee from West Indies prohibited (August 17).—Quarantine proclaimed by Mayor for fifteen days against persons and goods from Philadelphia; all persons from that city to stop at Mery's Tavern and undergo inspection by Dr. Joseph Way (August 18).—67 deaths at Fells Point (August 25).—Packets from Frenchtown to be quarantined at the Fort (September 1).—Legislature grants \$3000 additional in aid of "Public Hospital" and requires the Mayor and Council to make rules for its government and select an attending physician (November).—Davidge's work on yellow fever published.

Deaths: Drs. Andrew Wiesenthal, æt. 36; Samuel Stringer Coale, æt. 44; Thomas Drysdale, æt. 28.

1799. Yellow fever at Baltimore; also in Cecil, Harford, Charles, Dorchester and other counties of Maryland.—Drs. William Matthews and J. J. Jacquett begin practice at Baltimore.—General Quarantine Law passed by Congress; reported by Smith, of Maryland.—Health Ordinance passed (February 27).—Medical and Chirurgical Faculty organized at Annapolis, with Dr. Upton Scott, of Annapolis, as President, and Dr. Ashton Alexander, of Baltimore, as Secretary (June 3).—Baltimore declares non-intercourse with Philadelphia (August 28).—Order of August 28 rescinded; City Council appeals for aid for destitute and sick at Fells Point (October 2).

MEDICAL AND CHIRURGICAL FACULTY

1800. Population of Baltimore, 26,614; of the State, 341,548.—Dr. Douler, late of British Navy, settles at Fells Point; Dr. L. M. Dunan arrives from France. Yellow fever at Fells Point.—Benevolent Society of Baltimore organized; suggested by Mrs. Eleanor Rogers, mother-in-law of Dr. Geo. Buchanan, primus.—Dr. J. J. Giraud publishes his formula for the prevention and cure of yellow fever; consists of ipecac, etc.—During the summer of this year Dr. John Crawford introduces vaccination into Baltimore, the virus being obtained from Mr. Ring, of London. This was contemporary with its use by Dr. Benjamin Waterhouse, of Cambridge, Mass., July 8 (see “Ring on Cowpox,” 1801, p. 459). The supply of Crawford and Waterhouse was exhausted and Waterhouse’s second supply arrived in 1801, simultaneously with a supply for Dr. James Smith, of Baltimore.—Philippe Ricord, celebrated French syphilographer, born at Baltimore.—Funeral rites of George Washington celebrated at Baltimore. Procession, address and services at Christ Church. Immense concourse of people (January 1).—To prevent spread of epidemic, an encampment is opened for the sick north of the hospital (September 2).—Dr. James Smith opens his house to yellow fever sufferers. City authorities admit that the epidemic is yellow fever. Lime, ashes and lye to be used as disinfectants (September 5).—Annapolis and Alexandria declare quarantine against Baltimore (September 8-12).—Pestilence has ceased; total deaths, 1197, viz: 978 adults, 219 children; by far the great majority of deaths occur in East Baltimore; Legislature appropriates \$2000, the city \$3000 for the sufferers at Baltimore (October 27).—City Hospital about one-third completed and accommodates 130 patients; \$3000 has been expended in addition to the State appropriation (November 13).

MEDICAL AND CHIRURGICAL FACULTY

Deaths: Drs. Charles F. Stinnecke, Johnsey Doughady, Wesley Baker; John Purnell, at Snow Hill, December, æt. 35.

1801. Lazaretto built on Point opposite Fort McHenry.—Baltimore General Dispensary founded, chiefly through the efforts of Dr. John Crawford; 234 patients treated the first year (January 9).—Dr. James Smith, of Baltimore, vaccinates with virus procured from the physician of St. Pancras Hospital, London, by Mr. John Taylor, and sent by him to his brother, William Taylor, of Baltimore, who gives the supply to his family physician, Dr. Miles Littlejohn, and he, to have it tested, gives it to Dr. Smith, who makes successful trial of it at Almshouse (May 1), first on the person of a child named Nancy Malcolm, and later upon others (Dr. Smith published the history of these cases in the *Baltimore Telegram*, December 5 and 8, 1801, and also in the *Vaccine Inquirer*, 1822).—Female Orphan Asylum opened (May 11).—Medical and Chirurgical Faculty meets in second session at Annapolis. Dr. Philip Thomas, of Fredericktown, elected President, vice Upton Scott declining reelection. Medical College proposed (June 9).—Nineteen licenses and certificates issued to June.

Deaths: Drs. Lyde Goodwin, at Baltimore, æt. 76 (?); Wm. Lansdale, in St. Mary's County, March, æt. 36; Gustavus Brown, in St. Mary's County, July 3, æt. 57; R. I. Duckett, in Prince George County, November.

1802. New Jail adjoining the Falls on Mill Street completed.—Benjamin Henfrey, of Baltimore, first to discover a method of creating light by gas from wood.—A few cases of yellow fever at Baltimore.—Dr. James Smith establishes a Vaccine Institute at his residence (March 25); this institu-

MEDICAL AND CHIRURGICAL FACULTY

tion, one of the objects of which was to provide vaccine virus gratuitously to the poor, was maintained by Dr. Smith at his own expense until 1832. The services of this physician in promoting the introduction and spread of this great boon and in repeatedly arresting epidemics of smallpox, entitle him to the eternal gratitude of this community.—The Medical and Chirurgical Faculty meets in special session at Baltimore. The President urges the establishment of a medical college and a committee is appointed to frame a plan; vaccination officially endorsed (June 15).—Dr. John B. Davidge begins lectures on Anatomy, Surgery, Midwifery and Physiology (December 7); these lectures were continued annually until merged in the College of Medicine of Maryland in 1807.

Deaths: Drs. Daniel Moores, at Baltimore, æt. 57 (?); Thomas N. Stockett, in Anne Arundel County, May 16, æt. 54.

1803. Baltimore College chartered and by aid of lottery erected in Mulberry Street; Bishop Carroll, President of Board of Trustees, and Mr. James Priestley, Principal.—Baltimore becomes Metropolitan See of Roman Catholic Church in the United States.—Mount St. Mary's College at Emmitsburg organized.—Drs. Ennalls Martin, Tristram Thomas and Stephen Theodore Johnson introduce vaccination into Talbot County.—Biennial meeting of Medical and Chirurgical Faculty at Baltimore (June 3).

Deaths: Drs. Ezekiel Haynie, at Princess Anne, Somerset County, æt. 53; Edward Scott, at Galena, Kent County, October; James Sullivan, in Dorchester County, July 3, æt. 66.

1804. Penitentiary erected on Madison Street, near the York Road, largely through the efforts of Dr. John Crawford.—Bilious fever epidemic.—Cinchona bark four to six dollars

MEDICAL AND CHIRURGICAL FACULTY

per pound.—Medical Society of Baltimore founded, with Dr. Dunkel as President, and Dr. Davidge as Secretary.—Dr. James Cocke, in his graduation thesis at the University of Pennsylvania, defends the propriety and practicability of ovariotomy.—Dr. Joseph Brevitt, of Baltimore, advertises as “man-midwife.”

Deaths: Drs. Gustavus R. Brown, at Port Tobacco, September 30, æt. 56; Edward Worrell, at Chestertown, October 18, æt. 41; Howes Goldsborough, in Dorchester County, October 20, æt. 32.

1805. Dr. James Cocke begins practice at Baltimore.—First drug store established in Queen Anne's County; kept by Dr. Benjamin Hall.—St. Mary's College, Baltimore, incorporated as a University.—Drs. Smyth and Mackenzie reduce a dislocation of the shoulder of six months' standing and Dr. James Cocke one of four months' standing.—The Medical and Chirurgical Faculty meets at Baltimore; Drs. Crawford and Davidge deliver orations; vaccination again endorsed; licenses to be granted to oculists when competent (June).—Malignant “bilious” fever prevails at Elkton, 80 being sick at a time (September and October. Described by Dr. A. A. Evans, “History of Cecil County,” by Johnston).

1806. First line of packets between Baltimore and Philadelphia, consisting of four sloops which ran to Frenchtown on Elk River, whence freight was carried by wagons to Newcastle, Del., thence by water to Philadelphia.—Foundation of Cathedral at Baltimore laid, the first Cathedral erected in the United States (July 6).

1807. Influenza epidemic.—Dr. John Shaw, of Annapolis, settles at Baltimore and joins Drs. Davidge and Cocke in

MEDICAL AND CHIRURGICAL FACULTY

instructing medical students, taking the Department of Chemistry.—Union Bank built on North Charles Street.—Relief from drowning added to work of Baltimore General Dispensary.—Buildings of wood prohibited in the centre and improved parts of the city.—First stock purchased by Medical and Chirurgical Faculty (January 1). Annual meeting of Medical and Chirurgical Faculty held at Baltimore; resolutions passed dividing the State into medical districts with a view to the establishment of “district medical societies,” for “the promotion of medical and chirurgical knowledge” (June 1).—Dr. Davidge’s Anatomical Hall, southeast corner of Liberty and Saratoga Streets, demolished by a mob. The physicians rally to Davidge’s support and determine to apply to the Legislature for a charter for a medical college (November).—Medical College Bill passes Legislature (December 18).—Board of Regents of Medical College meets and organizes with Dr. George Brown as President, Solomon Birckhead as Treasurer, and James Cocke as Secretary. Dr. Davidge elected as Dean of the Faculty. Seven students this session (December 28).

Death: Dr. Leven Irving, in Somerset County, /April 8, æt. 54.

1808. New Courthouse erected at Baltimore, old arched Courthouse pulled down and hill leveled.—Legislature grants a lottery of \$40,000 for the benefit of the Medical College, afterwards increased to \$100,000.—Baltimore General Dispensary incorporated; has had 6263 patients to date.—Bishop John Carroll becomes first Catholic Archbishop in the United States.—*Medical and Physical Recorder* published by Dr. T. Watkins.—Yellow fever prevails in Pitt Street, Fells Point, in most malignant form. A prompt removal of the inhabitants by

MEDICAL AND CHIRURGICAL FACULTY

the advice of Dr. John Coulter, prevents its extension from this situation.—Dr. Edward Johnson elected Mayor.—Quarantine suspended (March 17).—City leases Maryland Hospital for fifteen years to Drs. Smyth and Mackenzie (June 24).—Legislature grants lottery for \$40,000 for benefit of Maryland Hospital (December 24).

Death: Dr. George Buchanan, at Lazaretto, Philadelphia, July 9, of yellow fever, æt. 45.

1809. Punishment of death restricted to crimes of murder, arson, rape and treason.—Rockville Academy, Montgomery County, established.—New Courthouse at Baltimore completed and occupied.—Legislature grants authority for lottery to raise \$100,000 to erect Washington Monument.—Legislature grants lottery in aid of Dr. James Smith's Vaccine Institute, but nothing ever realized from it.—Seventeen deaths from smallpox reported at Sharpsburg, due to use of spurious virus (September 13).

Deaths: Drs. John Shaw, at sea on his way to the Bahamas in search of health, January 10, æt. 30; Z. Magruder, in Montgomery County, December 2, æt. 44.

1810. Population of city, 46,555; of State, 380,546.—Smallpox appears but is soon extinguished by vaccination through the efforts of Dr. James Smith and others.—Vaccine Society in aid of Institute organized by Bishop Carroll, Rev. Dr. Bend, William Gwynn, Esq., Dr. James Smith and others.—First public commencement of Medical College; 5 graduates.—Dr. John Crawford reports a striking proof of the contagious nature of phthisis pulmonalis in a man and wife (Report of Censors of Baltimore, MS. Archives).—Dr. Crawford also notes relief in pertussis by vaccination.—Smallpox and

MEDICAL AND CHIRURGICAL FACULTY

spotted fever at Baltimore.—Ninety deaths in city in August from cholera infantum.

Deaths: Drs. John Archer, in Harford County, September 28, æt. 69; John Coats, at Easton, November 30, æt. 59.

1811. Dr. James Smith becomes Treasurer of the Medical and Chirurgical Faculty, giving \$1500 bond, Dr. Solomon Birkhead being his security.—*Medical and Philosophical Lyceum*, quarterly, published by Dr. N. Potter (one volume).

Death: Dr. James Davidson, at Queenstown, June, æt. 68.

1812. Mechanics Bank, corner Calvert and East (Fayette) Streets, Baltimore, built.—Legislature grants \$5000 annually for three years to Drs. Smyth and Mackenzie, for completion of Maryland Hospital. Board of Visitors report hospital in good order, central building nearly completed, and accommodations provided for 100 patients. Dr. William Gibson, Consulting Surgeon and Drs. George Brown, Miles Littlejohn, John Coulter, J. C. White, John Crawford, Solomon Birkhead, Pierre Chatard, John Cromwell and Ashton Alexander, Consulting Physicians.—Dr. James Smith addresses a circular letter to each M. C. setting forth the advantages of vaccination and enclosing virus.—Dr. John Crawford lectures on Natural History in Commerce Street.—West Nottingham Academy at Colora, Md., established.—One hundred and thirty-five deaths from smallpox from October, 1811, to April, 1812, inclusive.—Medical Society of Baltimore organized (January 8).—Dr. James Smith extinguishes a threatened epidemic of smallpox in Calvert County (January 26).—Jennerian Society organized, Bishop Kemp, President; Dr. James Smith, Secretary (February 6).—The smallpox has subsided by May 1 and no deaths from it at Baltimore for four years

MEDICAL AND CHIRURGICAL FACULTY

after this.—Medical College building on Lombard Street begun (May 7).—House of Industry (later, 1831, House of Refuge) organized by Drs. Edward Johnson, James McHenry, George Roberts, James H. McCullough and others (February 14).—Thirty-eight leading physicians of the city offer to vaccinate gratuitously and to pay each child presenting proof of genuine vaccination, twenty-five cents; Dr. James Smith distributes virus and inspects vaccine marks free (February 16).—Dr. Edward Jenner, of England, tests Dr. James Smith's virus and finds it genuine (March 17).—Class of five graduates at the Medical College; these are the first graduates whose names were published (May 4).—War declared against England (June 18).—Newspaper riots at Baltimore; Dr. William Gibson ligates the common iliac artery, the first case on record (July 27).—Act founding University of Maryland passed by Legislature (December 29).

Deaths: Drs. Jacob Hall, in Harford County, May 7, æt. 65; Wm. Baker, at Georgetown; James Gray, in Calvert County, æt. 66.

1813. Epidemic fever prevails in Talbot and Queen Anne's Counties, in winter and spring, described by Dr. Ennalls Martin.—Masonic Hall, St. Paul Street, Baltimore, begun by aid of lottery.—Legislature authorizes the Chancellor to commit idiots and lunatics to Baltimore Hospital.—United States Government establishes National Vaccine Institute at Baltimore, with Dr. James Smith as Agent.—University of Maryland organized (January 6).—The building on Lombard Street partly occupied during this session (April 22).—Meeting of Medical and Chirurgical Faculty (June 7, *Federal Gazette*).—First steamboat ever floated on Chesapeake Bay ("The Chesapeake") makes a trip from Baltimore to Frenchtown on Elk

MEDICAL AND CHIRURGICAL FACULTY

River (June 21); the vessel was built at Baltimore for the Union Line to Philadelphia.—The Faculty of the University of Maryland purchases Dr. Crawford's medical library from his widow (November).

Deaths: Drs. C. A. Warfield, in Anne Arundel County, January 29, æt. 61; John Crawford, at Baltimore, May 9, æt. 67; S. T. Johnson, at Easton, July 16; P. E. Noel, at Centerville, October 14, æt. 45; James Cocke, at Baltimore, October 25.

1814. Beneficial Society for prevention of hydrophobia founded by Drs. Henry Wilkins, James Smith, William Donaldson, Samuel Baker, James Page and Elisha DeButts (January 26).—City extends lease of Drs. Smyth and Mackenzie for ten years, on certain conditions (March 21); by loans from State and by lotteries they erect centre brick building, four stories, 64 x 56 feet, and two wings, three stories, 120 x 36 feet each; whole front, 300 feet.—“Medical men of Baltimore not attached as surgeons to regiments are notified to meet at Dr. Gibson's at 8 o'clock to organize a corps to follow the army if needed” (August 28).—Battle of North Point; General Ross, the British Commander, killed; Dr. George Pitt Stevenson, aide to General Stricker, complimented for gallantry and efficiency in the battle (September 12).—Bombardment of Fort McHenry (September 13); 234 sick and wounded from the troops around Baltimore brought to the “Public Hospital.”

Deaths: Drs. Upton Scott, first President of the Medical and Chirurgical Faculty, at Annapolis, February 23, in ninety-second year; Henry Stevenson, at Baltimore, March 31, æt. 92; Josias Carvil Hall, æt. 68.

1815. Brookville Academy founded.—Peace declared, city illuminated (January 15).—Epidemic in Charles and St.

MEDICAL AND CHIRURGICAL FACULTY

Mary's Counties (March 14).—Corner-stone of Masonic Hall, St. Paul Street, laid, Maximilian Godefroy, Architect (May 16).—Meeting of Medical and Chirurgical Faculty; Dr. Ennalls Martin elected President, Dr. John Arnest, Secretary; Dr. Richard Wilmot Hall delivers oration in Anatomical Hall of the University on "The Law of Organization" (June 5).—Corner-stone of Washington Monument laid on ground given by Col. John Eager Howard; the first erected to the "Father of his Country" (July 4).—Foundation stone of Battle Monument laid on site of old jail (September 12).

Deaths: Drs. Brooke, at Port Tobacco, March; Philip Thomas, at Fredericktown, April 25, æt. 67; Miles Littlejohn.

1816. Second Almshouse erected on Franklin Road, west of city; occupied until 1866; in 1865 it had 800 inmates.—Dr. James Smith memorializes Congress to extend benefits of vaccination to Army and Navy.—Dr. P. K. Rogers, of Fells Point, Baltimore, persists in inoculating against the public remonstrance of Dr. James Smith. Dr. Smith notifies the public, that although the Act of 1809 has expired, he will still furnish vaccine virus gratuitously to all.—Dr. James Smyth furnishes City Hospital with wax anatomical models at a cost of \$20,000. They were made by Chiappi and embraced a male and female figure, of life size, the parts and organs of which were separable, showing the internal organization, gravid uterus, etc. These models were destroyed in the burning of Peale's Museum, where they had been deposited.—Threatened smallpox epidemic at Baltimore stamped out by Dr. James Smith and others.—Same prevails in Dorchester and Queen Anne's Counties, where Drs. Robert Goldsborough, J. K. Harper and J. D. Emory offer to vaccinate the poor gratuitously and by their zeal overcome the public prejudice against it.—Specie payment

MEDICAL AND CHIRURGICAL FACULTY

resumed.—Act passed enlarging city; as enlarged consists of parallelogram, $3\frac{1}{2} \times 4\frac{1}{2}$ square miles, including 10,000 acres, land and water and twelve wards.—Over \$4,000,000, of \$28,000,000 total, subscribed here to Bank of United States, of which a branch is established at Baltimore.—Dr. Skipwith Coale invents apparatus for fracture of clavicle, which is highly commended by Drs. Gibson and Davidge.—By petition to Legislature, the Medical and Chirurgical Faculty procures an Act allowing one censor in each of the counties to qualify the graduates of the respective medical schools who can show a genuine diploma, the act of the censors being as effectual as though the applicant had been qualified by the Board of one or other Shore.—The first gaslight company in the world organized at Baltimore; gas works erected southwest corner of North and Saratoga Streets (June 17).—Sixth District Medical Society founded at Easton, Talbot, Caroline and Queen Anne's Counties being represented by Drs. Ennalls Martin, Tristram Thomas, T. R. Moon, G. T. Martin, S. T. Kemp, Earle, Barnett, Rodgers, T. Denny, J. Young, Spedden and A. Thompson (November 5).—Medical and Chirurgical Faculty in special session at Baltimore (December 16).

Deaths: Drs. James McHenry, at Baltimore, May 3, æt. 63; John Neill, at Snow Hill, June, æt. 67; William Somerville, æt. 54.

1817. Regular steamboat line between Baltimore and Annapolis.—First Independent Christ's Church erected northwest corner Charles and Franklin Streets, Rev. Jared Sparks, minister.—Circular Baptist Church erected, northeast corner of Sharp and Lombard Streets. Old church and grounds on Pitt (Fell) Street are sold and bodies removed thence to cemetery southwest of city.—German Society incorporated.—Auxil-

MEDICAL AND CHIRURGICAL FACULTY

ary Colonization Society incorporated to transfer free blacks to Africa.—Total mortality in city, 1323.—Legislature grants lottery scheme of \$100,000 to Drs. Davidge, Potter, Baker, Gibson, McDowell and DeButts for benefit of the University (January 16).—Levy Courts authorized to send lunatics to Maryland Hospital, for each of whom the county is to be assessed \$100, Chapter 78 (January 29).—Medical Society of Maryland incorporated, Dr. N. Potter, President, and other charter members Drs. E. DeButts, Samuel Baker, Tobias Watkins, Ezra Gillingham, John B. Caldwell, James Middleton, Maxwell McDowell, R. W. Hall and Thomas Hall (February); first meeting held November 1.—Old Belfry and St. Paul's Church, erected 1799, torn down and new church consecrated; lots sold and dead removed to burial ground in German Street (March 11).—Smallpox epidemic stamped out at Baltimore (May).—President Monroe visits Fort McHenry (June 1).—Annual Convention of Medical and Chirurgical Faculty held at Baltimore, Dr. Ennalls Martin reelected. Plan for district medical societies suggested (June 2).—Flood at Baltimore; six lives lost (August 8).

Deaths: Drs. Abraham Mitchell, in Cecil County, September 30, æt. 83; Henry Howard, æt. 44; David Steuart.

1818. Baltimore Medical Society, connected with University founded, Dr. Samuel Baker, President.—Seventy-five physicians at Baltimore.—Drs. Alexander and William H. Clendinen memorialize City Council of Baltimore to erect a Maryland Lying-in and Foundling Hospital, a bill for which had passed the House of Delegates but failed in the Senate (MS. City Archives).—Clinical Lectures delivered at City Hospital by Prof. N. Potter, with permission of Drs. Smyth and Mackenzie.—Law passed on petition of Medical and Chi-

MEDICAL AND CHIRURGICAL FACULTY

rurgical Faculty repealing law of 1816, Chapter 141, and enacting that no one residing out of the State be allowed to practice therein without obtaining a license and being amenable to the same penalties as those within it.—First Savings Bank opened at Baltimore.—Baltimore Physical Association for promotion of natural science founded at Baltimore, Horace H. Hayden, Secretary.—Recti muscles of the eye divided for strabismus by Dr. Wm. Gibson.—Second or Eastern Dispensary at Fells Point, Baltimore, incorporated (February 16), Drs. Alexander and Wm. H. Clendinen being charter members; the institution had been in operation already two years.—Smallpox epidemic at Baltimore averted by vaccination (October).

Deaths: Col. Armistead, Defender of Fort McHenry, April 25; Drs. Arnold Elzey, at Washington, June 6, æt. 60; Barton Tabbs, in St. Mary's County, October 13, æt. 61; Jos. Henry, æt. 24; Charles Carroll; James Middleton.

1819. Baltimore General Dispensary has 3987 patients during the year. Whole number treated from foundation, 30,663, of whom 25,388 were cured, 548 died; the rest negligent, dismissed, vaccinated. "It will be well if in 'these hard times' an establishment which has been so beneficial to the poor is continued with vigor to do good" (*Niles' Register*, March 29, 1820).—There are 83 physicians at Baltimore.—Dr. Edward Johnson again elected Mayor of the city.—Dr. Wm. Gibson elected Professor of Surgery in the University of Pennsylvania, vice Professor Physick.—Drs. Ducatel, George Frick, Williamson and Macaulay meet in a room over a stable, in the rear of northwest corner of Lexington and St. Paul Streets and organize a society for the promotion of science.—Drs. H. W. Ducachet and D. M. Reese trephine a fractured skull for meningeal hemorrhage with temporary relief to the patient

MEDICAL AND CHIRURGICAL FACULTY

(Cooper's Surgical Dictionary, American Edition, p. 363).—Dr. William Zollickoffer issues one of the earliest American treatises on *Materia Medica*.—City Bank fails; great financial distress.—Dr. James Smith inoculates with variolous matter, his two sons, nephew, ward and only daughter (all of whom he had previously vaccinated) at the bedside of a smallpox patient, to give public proof of his faith in the prophylactic virtues of vaccine virus (January 17, *Federal Gazette*, December 18, 1821).—Meeting of delegates at Philadelphia (June 1) to institute a National Pharmacopœia; the Medical and Chirurgical Faculty represented.—Annual Convention of Medical and Chirurgical Faculty at Baltimore; Dr. Ennalls Martin reëlected; 14 present (June 4).—Yellow fever, of which the city had been almost exempt for nineteen years, makes its appearance at Fells Point (July 21); 2287 deaths; epidemic ends October 20.—Meeting of Medical and Chirurgical Faculty (July 31 and September 6); report on yellow fever.

Deaths: Drs. Henry Skinner, æt. 34; James Smyth, at Baltimore, January 17, æt. 45; J. T. Shaaff, at Georgetown, May 3, æt. 67; Elisha Harrison, at Washington, D. C., August 24, æt. 57; James Murray, at Annapolis, December 17, æt. 80; George Pitt Stevenson, at Baltimore, of yellow fever, æt. 59; John O'Connor, at Baltimore, of yellow fever; Clark, at Baltimore, of yellow fever.

1820. Medical Society of Baltimore incorporated (Chapter 105).—Report of yellow fever published for the benefit of the Second or Eastern Dispensary, the expense being borne by Dr. Edward Johnson, Mayor of Baltimore.—Population of city, 62,738; of State, 407,350.—Dr. H. G. Jameson, of Baltimore, successfully extirpates nearly the entire upper jaw, hav-

MEDICAL AND CHIRURGICAL FACULTY

ing first ligated the common carotid artery; the first time the operation had ever been done.—Mr. Granville Sharp Pattison, of Glasgow, elected Professor of Surgery in the University of Maryland.—City Council appropriates \$1560 to physicians of East Baltimore for services in yellow fever epidemic of 1819 (March 2).—Dr. Robert Moore elected President of the Medical and Chirurgical Faculty (June).—Smallpox brought to Baltimore from Liverpool in August; 47 deaths.

Deaths: Drs. James Moat Anderson, in Kent County, December 8, æt. 68; Oliver Bond, J. B. Caldwell, H. Dorsey, Josiah Henderson, all of yellow fever.

1821. Instruction in Dentistry given at the University of Maryland.—Yellow fever at Fells Point.—Unauthorized physicians cannot collect their fees; licensed physicians cannot associate themselves with unlicensed under penalty of \$50 (Chapter 217).—Dr. Gibson invents apparatus for fracture of the thigh.—Dr. Jameson ligates the external iliac artery for aneurism.—Webster's Medical Library and Reading Room opened at 11 Sharp Street, with over 1000 volumes.—Medical Society of Maryland, Dr. Wm. Donaldson, President, requires preliminary examination in Anatomy and Medicine for its members.—Baltimore College reopened under Mr. L. H. Girardin (February 3).—Cathedral consecrated (May 31, completed 1865).—Annual Convention of Medical and Chirurgical Faculty at Baltimore, Dr. Robert Moore, President, 18 present (June 4).—Smallpox epidemic at Baltimore stamped out by vaccination (September).—On the suggestion of the Medical and Chirurgical Faculty six Vaccine Physicians are appointed for Baltimore, one for each ward, at a salary of \$200; these were the first Vaccine Physicians appointed by the city (December 17). There were 1268 vaccinations.

J. R. W. DUNBAR

1805-1871.

MEDICAL AND CHIRURGICAL FACULTY

Deaths: Drs. Thomas Love, at Cockeysville, March 1, æt. 67; Thomas Archer, in Harford County, October 7, æt. 53; William Kilty, Chancellor, of Maryland, at Annapolis, æt. 63; Thomas Cradock, in Baltimore County, October 19, æt. 69.

1822. Ovariotomy attempted at Baltimore by Dr. Jameson.—Dr. D. M. Reese successfully trephines the skull for epileptoid convulsions.—Law establishing United States Vaccine Agency at Baltimore under Dr. James Smith, repealed.—Loan of \$30,000 by State to University of Maryland.—Dr. Pierre Chatard taps a woman 76 times in 2½ years, removing 871 quarts of water.—Dr. Wm. Zollickoffer recommends prussiate of iron in intermittents.—Drs. C. Mackenzie, George Frick and Patrick Macaulay deliver clinical lectures at the Maryland Hospital.—Vaccine Society reorganized, Dr. James Steuart President, Dr. James Smith, Secretary (January 28).—*Vaccine Inquirer* issued, Dr. James Smith, Editor (March 15).—Dr. Samuel Annan, of Emmitsburg, performs the first recorded case of tracheotomy in Maryland (April 5 and August 22).—Dr. Wm. Howard, of Baltimore, takes out a patent for a locomotive, the first in America (April 9).—Annual Convention of Medical and Chirurgical Faculty held at Baltimore, Dr. Robert Moore, President (June); prize of \$50 offered for essay on Cholera Infantum.—Dr. James Smith granted a patent for a new and useful improvement in the art of vaccinating (July 10).—Jameson performs tracheotomy (September 2, see *Recorder*).—Masonic Temple on St. Paul Street dedicated by Grand Lodge (November 29).—Almshouse removed to Calverton, in the western suburbs of Baltimore; 533 city and county paupers in it (December 2).

Deaths: Drs. George Brown, at Baltimore, August 24, æt. 67; Joseph Sim Smith, at Taneytown, September 5.

MEDICAL AND CHIRURGICAL FACULTY

1823. Athenæum founded and books purchased.—Dr. Edward Johnson elected Mayor for third time.—Drs. Davidge and R. W. Hall each tie the carotid for fungous growth in the antrum.—Dr. Wm. D. Macgill, of Frederick, ties both carotids in the same subject, at an interval of a month, for fungous tumor of the eyes with relief; this was the first time the double operation had been done in America.—Dr. Davidge removes the entire parotid.—The Pattison-Cadwallader duel is fought in Delaware.—Dr. Annan again performs tracheotomy (March 25).—Dr. Jameson performs tracheotomy for foreign body (May 15 and again in September).—Baltimore Infirmity (University Hospital) completed and occupied (October 20); lectures held October 27; one of the four wards devoted to Diseases of the Eye.

Deaths: Drs. Reverdy Ghiselin, in Prince George County, æt. 58; John W. Dorsey, at Liberty, Frederick County, æt. 73; S. L. P. Roberts, at Baltimore; William Bantz, at Frederick, March 10, æt. 33; John Coulter, at Baltimore, May 24, æt. 72; William Beanes, Jr., at Upper Marlboro, October 12, æt. 74.

1824. Indigent Sick Society organized.—Dr. George Frick publishes the first treatise on Diseases of the Eye by an American, and establishes an Eye Dispensary in connection with the Baltimore Dispensary.—Jameson excises the cervix uteri, the first time in Great Britain or America (May).—Annual Convention of Medical and Chirurgical Faculty held at Baltimore (June 7).—Degree of LL.D. conferred on Lafayette at the University of Maryland (October 9).

Deaths: Drs. John Owen, at Baltimore, October, æt. 49; Thomas Hamilton, at Baltimore, æt. 60.

1825. Maryland Institute incorporated; lectures delivered by Drs. Revere and Ducatel.—Barnum's Hotel erected, Calvert

MEDICAL AND CHIRURGICAL FACULTY

and Fayette Streets, Baltimore.—Public free school system established at Baltimore.—The State seizes the University of Maryland, turns out the Regents and places the institution in the hands of Trustees.—Dr. Ephraim McDowell, the father of ovariotomy, receives Hon. M.D. of the University.—Dr. Wm. D. Macgill performs the first lithotomy in Washington County (December 27, *Hagerstown Torchlight*).

Deaths: Drs. John Bowie, of Montgomery County; Cosmo G. Stevenson, at Baltimore, æt. 40; Christian Taylor; Ezra Gillingham, at Baltimore; S. Gittings, in Harford County; Zechariah Clagett, in Washington County, January 28, æt. 64.

1826. Hebrews become freemen in Maryland.—Joshua I. Cohen and Solomon Etting the first Hebrews elected to office.—Academy of Sciences and Literature of Maryland reorganized and incorporated.—Legislature authorizes erection of buildings for Maryland Hospital on Broadway, which, by relinquishment of claim of city, becomes a State Institution.—Dr. Duncan Turnbull lectures on Anatomy and Surgery on North Paca Street.—Dr. Robert Goldsborough, of Queen Anne's County, elected President of the Medical and Chirurgical Faculty (June); prize of \$100 awarded (see 1822).

Deaths: Drs. Robert Hulse; J. W. Daly; Edward White, at Cambridge, March 23, æt. 71; Mathias Jones, at Princess Anne, May 8, æt. 58; William C. Miller, at Elkton, October 3.

1827. Baltimore and Ohio Railroad incorporated, the first in the United States (February 28).—Dr. Nathan R. Smith, of Jefferson Medical College, Philadelphia, elected to the Chair of Surgery in the University of Maryland, vice Prof. Granville S. Pattison, who had gone to London the year before (March 13).—Washington College, of Washington, Pa.,

MEDICAL AND CHIRURGICAL FACULTY

authorizes the establishment of a medical school at Baltimore, with the following faculty: H. G. Jameson, Surgery; S. K. Jennings, Materia Medica; W. W. Handy, Obstetrics; James H. Miller, Practice; S. Annan, Anatomy and Physiology; J. W. Vethake, Chemistry (April 25); the lectures begin the following fall on Holliday Street, opposite the City Hall.—Annual Convention of Medical and Chirurgical Faculty convenes at Athenæum, Baltimore (June 4).—During following winter, the weather was so mild that no ice was gotten here; in the summer of 1828 several cargoes were brought here from the North (for the first time) and sold for \$1 per bushel.—Northern Central Railroad incorporated.

Deaths: Drs. John Rumsy, in Harford County; John P. Ahl, at Baltimore, July 13, æt. 79; Henry Keerl, at Baltimore, July 16, æt. 72; George Roberts, at Baltimore, August 2; Colin Mackenzie, September 1, æt. 52.

1828. Canton Company organized and lays out streets for addition to city.—Shot Tower erected, corner Front and Pitt Streets, 234 feet high.—Prof. N. R. Smith performs myotomy for torticollis.—Duel at Bladensburg between two medical students of the University, Samuel J. Carr, of South Carolina, and Wm. Bond Martin, of Maryland; the latter is instantly killed (February 2).—Service for general diseases at Maryland Hospital discontinued and admission limited to the insane; the title thenceforth changed to "Maryland Hospital for the Insane."—Annual Convention of Medical and Chirurgical Faculty held at Baltimore (June 2).—Corner-stone of Baltimore and Ohio Railroad at the Viaduct laid by Charles Carroll, of Carrollton (July 4).—Chesapeake and Ohio Canal begun, President Adams breaking ground (July 4).

MEDICAL AND CHIRURGICAL FACULTY

Deaths: Drs. P. K. Rogers, at Williamsburg, Va.; John Huston, at Salisbury, January 23, æt. 59.

1829. Peale's Museum, North Holliday Street, bought by the city for a City Hall.—Medical and Chirurgical Faculty meets at Baltimore; Prof. N. R. Smith, orator (June 1).—*Maryland Medical Recorder*, a quarterly periodical, begun at Baltimore by Dr. Jameson.—Centenary celebration of founding of the city. First stone laid of Northern Central Railroad, at new limits of city (August 8).—Chesapeake and Delaware Canal opened (October 17).—Statue of Washington raised to top of monument (November 25).—Thirty-seven persons are drawn in a car on the Baltimore and Ohio Railroad by one horse at the rate of ten miles an hour "to the astonishment of a multitude of spectators."

Deaths: Drs. Jos. A. Beall, of Prince George County; J. B. Taylor; Edward Johnson, at Baltimore, April 19, æt. 62; Elijah Davis, in Harford County, June 29, æt. 68; J. B. Davidge, at Baltimore, August 23, æt. 61.

1830. Population of city, 80,625; of State, 447,040.—House of Reformation incorporated.—Prof. N. R. Smith publishes account of posterior suspensory splint for treatment of fractures of leg; also of instruments for seizing arteries in ligating.—Prof. N. R. Smith begins publication of *The Baltimore Monthly Journal of Medicine* (February 1).—Annual Convention of Medical and Chirurgical Faculty held at Baltimore, 33 present; Dr. Robert Goldsborough reëlected President. Library founded, \$500 being appropriated on motion of Dr. Samuel Baker (June 7).—First journey by steam in the United States made at Baltimore by Peter Cooper (August 28).—Organization of University of Maryland Faculty of Arts and Sciences (September 8).

MEDICAL AND CHIRURGICAL FACULTY

Deaths: Drs. J. W. Anderson, in Liberia, Africa, æt. 28; John D. Godman, at Philadelphia, April 17, æt. 35; John Groome, at Elkton, May 18, æt. 61; James M. Anderson, Jr., at Chestertown, May 31, æt. 56; William Coskery, at Baltimore, October.

1831. Retro-vaccination of the cow performed by Dr. H. G. Jameson, Consulting Physician to Board of Health of Baltimore and virus thus obtained successfully used; 4000 vaccinated during year.—Dr. J. K. Sappington, of Havre de Grace, uses ergot in obstetrical practice.—Committee appointed by Censors of Medical and Chirurgical Faculty to prosecute unlicensed graduates of University of Maryland; Mr. McMahan employed as counsel, fee \$50.—Dr. N. R. Smith invents his lithotomy gorget.—Annual Convention of Medical and Chirurgical Faculty meets at Baltimore, 34 present; Dr. Robert Goldsborough reëlected President; prize of \$100 offered for best treatise on Malaria in 1827 awarded to Dr. C. Caldwell.

Deaths: Drs. N. Hammond, at Easton, æt. 36; John Harper, at Baltimore, January; Elisha DeButts, at Baltimore, April 3, æt. 57.

1832. Washington Medical College of Baltimore is incorporated by the Legislature (Laws of Maryland, Chapter 187).—The Medico-Chirurgical Society of Baltimore, through its Committee of Honor, S. Baker, M. McDowell and Thos. H. Wright, frames a code of ethics, which is among the first in the United States.—Prof. N. R. Smith publishes his work on "The Surgical Anatomy of the Arteries."—The Medical and Chirurgical Faculty meets at Baltimore.—Early in July cholera appears in the city; a quarantine law is passed by the City Council, July 7; the disease is not recognized till August 4;

MEDICAL AND CHIRURGICAL FACULTY

the last case occurs November 4. Total deaths in city for year, 3572; of which 853 were from cholera and 79 from small-pox. Death rate, 42.02 per 1000. There is typhus fever in the City Jail. The cholera spreads over the State. Special cholera hospitals founded and put under charge of Drs. George B. Mackenzie, John Carrère and A. L. Warner.—City appropriates \$10,000 to check the epidemics.—Dr. Duncan Turnbull makes the first post-mortems of cholera cases.—Hannah Moore Academy established at Lutherville.

Deaths: Drs. George E. Mitchell, at Washington, June 28, æt. 51; John Cromwell, at Baltimore, September 14, æt. 68.

1833. Magnificent meteoric display.—Dr. Robley Dunglison, of the University of Virginia, becomes Professor of Materia Medica, etc., in the University of Maryland.—Hygiene and Medical Jurisprudence introduced at the same school and dissection made compulsory.—The *Baltimore Medical and Surgical Journal and Review* begun by Prof. Eli Geddings; title changed in 1834 to *North American Archives of Medical and Surgical Science*. Suspended 1835.

Deaths: Drs. Charles Swearingen, at Cumberland; John T. Rees, at Philadelphia, æt. 53; Wm. D. Macgill, at Hagerstown, March 13, æt. 30; Richard Pindell, at Lexington, Ky., March 20, æt. 78.

1834. All physicians required to report their smallpox cases, under penalty of having their names published. 71 deaths from smallpox.—Dr. John P. Mackenzie's lease of Maryland Hospital expires. Dr. R. S. Steuart appointed President and Superintendent, which position he held for nearly the remainder of his life (March 7).—Annual Convention of Medical and Chirurgical Faculty held at Baltimore, 32 present; Dr.

MEDICAL AND CHIRURGICAL FACULTY

Robert Goldsborough, President; Dr. Fonerden declines reëlection as Recording Secretary and Dr. R. A. Durkee is elected.

Deaths: Drs. John D. Emory, at Centerville, æt. 55; Joseph Allender, at Baltimore, æt. 64; William Hilleary, in Frederick County, March 15, æt. 58; William Howard, at Baltimore, August 25, æt. 40; Ennalls Martin, at Easton, December 16, æt. 76.

1835. Dr. J. C. S. Monkur erects his Fells Point Institute on South Ann Street, between Canton Avenue and Aliceanna Street (now a public school).—Dr. John P. Mettauer, of Virginia, appointed Professor of Surgery in Washington Medical College, Baltimore, vice Jameson, removed to Cincinnati.—Dr. William Gibson performs Cæsarean section, saving mother and child.—Athenæum at Baltimore burned and archives of Maryland Academy of Sciences destroyed (February 7).

Deaths: Drs. Thomas Boyer, at Tiffin, O.; Wm. Donaldson, at Baltimore, January 14, æt. 56; Samuel Baker, at Baltimore, October 16, æt. 50.

1836. Academy of Sciences reorganized, Dr. P. Macaulay, President.—Flood at Baltimore; several lives lost.—Dr. J. C. S. Monkur elected Professor of Theory and Practice of Medicine at Washington Medical College, Baltimore.—Meeting of Medical and Chirurgical Faculty at Baltimore; Dr. Maxwell McDowell elected President.

Deaths: Drs. J. Haines McCullough, Jr.; Wilson Waters, in Anne Arundel County, February 5, æt. 77; James Anderson, at Rockville, May 9, æt. 76; Charles Worthington, at Georgetown, September 10, æt. 79; John Woolford, in Somerset County, November 15, æt. 76; Solomon Birkhead, at Baltimore, November 30, æt. 75.

MEDICAL AND CHIRURGICAL FACULTY

1837. Flood at Baltimore; 25 drowned.—Maryland Academy of Sciences publishes its first volume of Transactions.—Faculty of Physic of University of Maryland withdraws from control of Trustees and forms a separate school, occupying the old Indian Queen Hotel, corner Baltimore and Hanover Streets. The Regents institute suit for recovery of their rights under the charter. The Trustees fill the vacancies with a new faculty: Drs. J. F. May, of Washington, H. W. Baxley and others and continue the courses.—Dr. J. R. W. Dunbar elected Professor of Surgery in Washington Medical College, vice Mettauer resigned.—Deaths from smallpox, 52.—Dr. Horace H. Hayden delivers dental lectures at the University of Maryland.—Dr. Wm. Gibson performs Cæsarean section a second time on a patient, with successful result.—Baltimore *Sun* issued, May 17.

Death: Dr. Edward Gannt, in Kentucky, æt. 96.

1838. The Legislature appropriates \$20,000 to Maryland Hospital for the Insane.—Dr. N. R. Smith removes the parotid gland; resigns his Chair at the University of Maryland and accepts Chair of Practice at Transylvania University, Lexington, Ky.—The Faculty of Washington Medical College occupies its new building on Broadway (now Church Home and Infirmary). It cost \$40,000 and was provided with a general and a marine hospital.—Deaths from smallpox in city, 71.—Legislature passes an Act (Chapter 30) granting authority to Thompsonians or Botanic physicians to charge and receive compensation for their services and medicine, thus depriving the Medical and Chirurgical Faculty of its chartered rights. There can be little doubt that the Court of Appeals would have decided in favor of the Faculty had this case been brought before it, as it did in favor of the Regents of the University

MEDICAL AND CHIRURGICAL FACULTY

this same winter.—Philadelphia, Wilmington and Baltimore Railroad organized (February 5).—First steamer leaves Baltimore for Europe (May 20).

Deaths: Drs. Henry Hunt, at Washington, æt. 56; Samuel Young, at Hagerstown, æt. 99; Charles A. Beatty, at Georgetown, October 13, æt. 76.

1839. Baltimore Medical Institute founded by Dr. J. R. W. Dunbar, at 151 West Lombard Street, second door from Hanover Street.—Court of Appeals decides in favor of Regents, who resume control of the University Buildings.—Dr. H. Willis Baxley removes lower jaw for osteosarcoma.—Baltimore College of Dental Surgery incorporated, the first in the world. Faculty: Drs. H. H. Hayden, Chapin A. Harris, Thomas E. Bond, Jr., and H. Willis Baxley.—Washington Medical College of Baltimore made a University by Act of Legislature. Resident students admitted to the Hospital (March 6).—Drs. Chapin A. Harris, of Baltimore, and Eleazer Parmley, of New York, dentists, found the first journal in America devoted exclusively to Dentistry, the *American Journal of Dental Science* (June).—*Maryland Medical and Surgical Journal*, a quarterly, founded by the Medical and Chirurgical Faculty (October); published until March, 1843.—Mercantile Library Association instituted (November 13).—Manual Labor School organized, Dr. Dunbar, Chairman (December 16).

Deaths: Drs. J. James Giraud, at Baltimore, æt. 80; Joseph Brevitt, at Baltimore, April 15, æt. 70; Wm. H. Clendinen, at Baltimore, November 6, æt. 67.

1840. Population of city, 102,313; of State, 470,019.—Course at University of Maryland lengthened to six months.—Mount Hope Retreat for the Insane founded.—East Balti-

MEDICAL AND CHIRURGICAL FACULTY

more Lyceum and Franklin Institute of Natural History established.—Eye and Ear Infirmary established at 88 North Howard Street, by Drs. J. I. Cohen and S. Chew (January).—Annual Convention of Medical and Chirurgical Faculty held at Baltimore (June 1).—Maryland College of Pharmacy organized by Drs. S. G. Baker, W. E. A. Aikin and Wm. Riley representing the Faculty, and Messrs. John Hill, George W. Andrews, Thomas G. Mackenzie, David Stewart, H. B. Atkinson, J. N. W. Gordon, John Chapman and Robert H. Coleman representing the Pharmacists of Baltimore (June 8).

Deaths: Drs. Mifflin Coulter, at Baltimore, October 12, æt. 41; Samuel H. Lyon, at Booneville, Mo., October 12, æt. 40.

1841. Seven Vaccine Physicians appointed.—Prof. N. R. Smith resumes the Chair of Surgery at the University.—Instruction given there in auscultation and percussion for the first time by Dr. Wm. Power.—Maryland College of Pharmacy incorporated (January 17); there were 17 incorporators and at first the lectures were delivered by the members in turn (January 27).—Annual meeting of the Medical and Chirurgical Faculty held at Baltimore; Dr. Joel Hopkins elected President (June).

Deaths: Drs. S. S. Dickinson, at Trappe, Talbot County, æt. 70; Wm. N. Baker, at Baltimore, February 16, æt. 30; James Smith, at Pikesville, June 12, æt. 70; S. G. Baker, at Baltimore, August 1, æt. 26; Morgan Brown, in Kent County, October 6, æt. 72; John Tyler, at Fredericktown, October 15, æt. 78.

1842. Dr. Joseph Robey elected Professor of Anatomy at the University of Maryland.—Annual Convention of Medical and Chirurgical Faculty held at Baltimore (June).—First Com-

MEDICAL AND CHIRURGICAL FACULTY

mencement of Maryland College of Pharmacy held with three graduates (June 21).—Baltimore and Ohio Railroad opened to Cumberland (November 3).—Mercantile Library incorporated; opened November 17.

Deaths: Drs. Wm. McPherson, in Charles County, æt. 36; Maurice Morrison, at Havana, September 14, æt. 35; Edward Scott, in Kent County, October 1, æt. 56; Wm. R. Fisher, at Philadelphia, October 25, æt. 34.

1843. Total vaccinated, 2655.—Dr. Elisha Bartlett becomes Professor of Practice at the University of Maryland.—Impeachment and trial of Professor Richard Wilmot Hall by his colleagues at the University of Maryland for incompetency and violation of regulations. He is acquitted by the Regents. A personal encounter follows between him and Prof. N. R. Smith.—Medical and Chirurgical Faculty convenes in annual session at Baltimore (June).

Death: Prof. Nathaniel Potter, at Baltimore, January 2, æt. 72.

1844. Lectures of the Maryland College of Pharmacy delivered at the University of Maryland, Dr. David Stewart, the first Professor of Pharmacy in the United States; these lectures were continued until 1847, when they were suspended.—Mount Hope College, North Avenue and Bolton Street, purchased and opened as a hospital for the insane by Sisters of Charity.—Maryland Historical Society organized.—Dr. Colton exhibits the use of “laughing gas” (nitrous oxide) at Assembly Rooms, and shows its application to Dentistry.—Alumni Association of University of Maryland School of Medicine organized, Dr. George W. Miltenberger, President.—College of St. James, Washington County, established.—

MEDICAL AND CHIRURGICAL FACULTY

Electric telegraph completed between Baltimore and Washington and the first message ever transmitted by this method sent over the wire (May 24).

Deaths: Drs. H. H. Hayden, at Baltimore, January 26, æt. 74; G. W. Purnell, at Berlin, Md., May 18, æt. 67; Samuel Thompson, in Queen Anne's County, September 6, æt. 67.

1845. Experiments to procure vaccine virus from the cow by both variolation and vaccination made this and the following years by Dr. W. T. Leonard, City Physician.—Smallpox epidemic in the city, 110 deaths. Dr. William Power assumes charge of the Chair of Practice at the University in the absence of Professor Bartlett.—Baltimore buys 122 acres of land on the south side of the Patapsco River, opposite Fort McHenry, for a smallpox hospital at \$2500. This was abandoned in 1858 for a new site at Hawkins Point.—Course on Operative Surgery begun at the University of Maryland.—Maryland Historical Society chartered.—Annual Convention of Medical and Chirurgical Faculty held at Baltimore (June 2).—Naval Academy located at Annapolis (October 10).

Deaths: Drs. Thomas S. Fassitt, in Worcester County, æt. 80; James Steuart, at Baltimore, æt. 90.

1846. Each city ward to have a Vaccine Physician.—Dispensaries required to keep virus on hand.—Smallpox epidemic, 115 deaths.—Dr. Wm. T. Leonard, City Physician, variolates and vaccinates cows with success.—Dr. Alexander H. Bayly, of Cambridge, successfully uses the horseshoe magnet in removing a spicule of iron from the eye.—Convention of "The Faculty from the different States" to devise plan for the improvement of medical education held at New York City (May). It was first intended to hold this meeting at Baltimore and

MEDICAL AND CHIRURGICAL FACULTY

the Executive Committee had been directed to issue notices to that effect (see Transactions of 1848).—Annual Convention of Medical and Chirurgical Faculty held at Baltimore; Dr. N. R. Smith delivers the annual oration (June 1).

1847. Smallpox epidemic at Baltimore.—Southern Dispensary founded.—Maryland Medical Institute, a preparatory school of high rank, founded at Baltimore by Drs. C. Frick, E. W. Theobald, D. Stewart and C. Johnston, at corner of Fayette Street and Elbow Alley.—Maryland Institute reorganized by J. H. B. Latrobe; first exhibition held in Washington Hall.—Course on Pathology begun at the University.—Annual Convention of Medical and Chirurgical Faculty held at Baltimore (June); effort to secure registration of births, deaths and marriages in the State.—Medical reform adopted by the Medical and Chirurgical Faculty as recommended by the American Medical Association (July).

Deaths: Drs. A. Pue, at Baltimore, *æ*t. 71; Charles Maguire, at Baltimore; Maxwell McDowell, at Baltimore, *æ*t. 76; Henry Wilkens, in Baltimore County, *æ*t. 80; A. L. Warner, at Richmond, Va., May 5; John Revere, at New York, May 7, *æ*t. 60; Tristram Thomas, at Easton, August 5, *æ*t. 77; R. W. Hall, at Baltimore, September 14, *æ*t. 62.

1848. Dr. Thomas L. Murphy performs the first ovariectomy at Baltimore; the patient recovers and lives many years.—First annual meeting of the American Medical Association held at Baltimore, at Second Universalist Church, East Baltimore Street (May 2).—Annual Convention of Medical and Chirurgical Faculty held at Baltimore; Dr. R. Steuart elected President. Fee table of Medico-Chirurgical Society adopted (June 5).—Baltimore Athenæum opened with inaugural ad-

MEDICAL AND CHIRURGICAL FACULTY

dress by Mr. Brantz Mayer (October 23).—Medical and Chirurgical Faculty in session regarding cholera. Report of Committee recommending measures of protection, etc., Dr. Theobald, Chairman (November 3 and 13).

Deaths: Drs. R. A. Durkee, æt. about 48; Upton H. Berryman; P. Chatard, at Baltimore, January 5, æt. 80.

1849. Annapolis has 3500 inhabitants.—First National Council of Roman Catholic Bishops meets at Baltimore (May 6).—Annual Convention of Medical and Chirurgical Faculty held at Baltimore; Dr. Peregrine Wroth elected President (June 6).—Cholera at Baltimore Almshouse (July 11). Of 669 inmates, 155 are attacked and 86 die. One-half of the male inmates are attacked while only 4 per cent. of the females suffer. As soon as its source, a foul sewer, is discovered and removed, the epidemic ceases (Buckler). Only four cases in the city, the measures suggested by Dr. Buckler and enforced by the city saving it. There are also 83 cases of typhus fever at the Almshouse and 39 deaths—Washington University Medical School removed from Broadway to New Assembly Rooms, northeast corner Lombard and Hanover Streets (September 17).—Edgar A. Poe dies at Baltimore (October 7).—Baltimore Association for the Improvement of the Condition of the Poor organized (December 17).

Deaths: Drs. Wm. A. Clendinen, at New Orleans, æt. about 40; Christopher Todd, in Baltimore County, March 30, æt. 86; J. T. Ducatel, at Baltimore, April 23, æt. 52; P. Macaulay, at Baltimore, September, æt. 57; Robert Goldsborough, at Centerville, September 30, æt. 76.

1850. Frick's work on "Renal Affections" appears.—Population of city, 169,054; of State, 583,034, with 990 physicians.

MEDICAL AND CHIRURGICAL FACULTY

—Medical and Surgical Society founded “for the furtherance of social intercourse in the profession;” meets monthly.—153 deaths from smallpox.—Baltimore Infirmary enlarged.—Dr. C. Frick shows that dumb-bell crystals in the urine are not characteristic of oxalate of lime alone as Bird had taught, but that uric acid may also produce them.—Annual Convention of Medical and Chirurgical Faculty held at Easton; Dr. Richard S. Steuart elected President (June 3).—Inoculation prohibited at Baltimore by city ordinance (June 17).

1851. There were 104 deaths from smallpox in the city and 80 at the Marine Hospital. Twenty Vaccine Physicians appointed. Total vaccinations, 3738 (Q.).—Baltimore City and County separated.—Dr. T. H. Buckler publishes work on cholera epidemic of 1849.—Corner-stone of Maryland Institute laid (March 13).—Annual Convention of Medical and Chirurgical Faculty held at Baltimore; Dr. S. B. Martin, Orator; Dr. W. W. Handy elected President (June 4).—Building of Washington University on Broadway and Lombard Street sold for debt and the institution closed.

Deaths: Drs. E. W. Theobald, at Baltimore, March 24, *æt.* 32; G. S. Pattison, at New York, November 12, *æt.* 60.

1852. Catalogue of Library published.—Young Men’s Christian Association organized at Baltimore.—Measles epidemic.—New site, Spring Grove near Catonsville, selected for Maryland Hospital for Insane.—Dr. S. Chew elected to Chair of Practice at University of Maryland.—Two cases of cholera reported.—First Plenary Council of Roman Catholic Church meets at Baltimore (May).—Annual Convention of Medical and Chirurgical Faculty held at Baltimore; Dr. M. S. Baer elected President (June 2).

MEDICAL AND CHIRURGICAL FACULTY

Deaths: Drs. George Lynn, at Cumberland, æt. 96; J. B. Rogers, at Philadelphia, June 15, æt. 50; William Power, at Baltimore, August 15, æt. 39.

1853. Scarlet fever epidemic.—Sheppard Insane Asylum founded and endowed with \$500,000.—Yellow fever at Fells Point; 18 deaths.—Loyola College founded at Baltimore by Jesuits, taking the place of St. Mary's College, henceforth limited to theological students.—Baltimore and Ohio Railroad opened to Ohio River (January 10).—Institution for Blind incorporated at Baltimore (May 19).—Annual meeting of Medical and Chirurgical Faculty held at Baltimore, Dr. John L. Yeates elected President. Great Revival of the Society. Last attendance of a charter member (A. Alexander). Publication of Transactions begun (June 1).—Baltimore Pathological Society founded by Drs. Stewart, Pottinger, Frick, Murdoch, Turner, Donaldson, Johnston, T. H. Buckler and Van Bibber.

Deaths: Drs. Wm. Zollickoffer, in Carroll County, æt. 60; Philip Trapnall, at Harrodsburg, Ky., January 31, æt. 80; James H. Miller, May 25, æt. 65.

1854. Maryland Institute for the Promotion of the Mechanic Arts erected.—Twenty-six deaths from smallpox in the city and 95 at the Marine Hospital (Q.).—Dr. Wm. H. Clendinen establishes a special dispensary at the northeast corner of Walsh and Biddle Streets, which he attends for two years.—Protestant Union Infirmary opened.—Church Home opened in old Washington University Building on North Broadway, by Protestant Episcopal Church.—Two deaths from cholera reported.—Compulsory Courses in Experimental Physiology and Microscopy introduced at University of Maryland.—Yellow fever again at Fells Point; 40 cases, with 20 deaths.

MEDICAL AND CHIRURGICAL FACULTY

Deaths: Drs. Joseph F. Perkins, at Baltimore, æt. 48; D. W. B. McClellan, at Baltimore, May, æt. 48; J. D. Readell, at Baltimore, May 31, æt. 64; M. S. Baer, at Baltimore, June 8, æt. 59; S. K. Jennings, at Baltimore, October 19, æt. 83.

1855. Total vaccinated, 3910.—Baltimore subscribes \$36,683 for yellow fever sufferers at Norfolk and Portsmouth.—Dr. C. Johnston publishes a paper on the auditory apparatus of the mosquito.—Dr. W. C. Van Bibber publishes an analysis of 4300 cases of labor from the practice of Dr. P. Chatard.—Medico-Chirurgical Society of Baltimore, which had suspended in 1838, reorganized (January 11).—First steam fire engine at Baltimore (February 1).—Annual meeting of Medical and Chirurgical Faculty held at Baltimore (June). Dr. Jacob Baer elected President. Committee appointed on motion of Dr. Donaldson, to secure Act for registration of births, marriages and deaths (Legislature memorialized upon the subject ineffectually).—Board of Health of Baltimore (Drs. Kemp, Houck and Gilman) visits Norfolk and Portsmouth to investigate the yellow fever epidemic (July 28). They determine it is of local origin and non-contagious, and having cleaned the city throw it open to all refugees. Twenty-six refugees from Norfolk die here of yellow fever, but not a single resident of Baltimore contracts the disease.

Deaths: Drs. E. Bartlett, in Rhode Island, æt. 51; A. Alexander, at Baltimore, February, æt. 83; H. G. Jameson, at New York City, August 24, æt. 77; J. H. Briscoe, at Baltimore, September, æt. 65; Tobias Watkins, at Washington, November 4, æt. 74; H. A. Stinnecke, at Baltimore, December 21.

1856. Maryland College of Pharmacy reorganized with following faculty: Dr. L. H. Steiner, Chemistry; Dr. Charles

MEDICAL AND CHIRURGICAL FACULTY

Frick, *Materia Medica*; Israel J. Grahame, Pharmacy.—Annual meeting of Medical and Chirurgical Faculty held at Baltimore, Dr. C. C. Cox elected President.

Deaths: Drs. S. T. Kemp, at Trappe, Talbot County; Thomas E. Bond, at New York City, March 14, æt. 74; Peregrine Warfield, at Georgetown, July 24, æt. 77.

1857. Peabody Institute founded at Baltimore by George Peabody.—Rock Hill College at Ellicott City founded.—Total vaccinated, 4121.—Measles and scarlet fever epidemic.—Dr. A. B. Arnold reports three cases of scleroderma.—Medical and Chirurgical Faculty holds annual meeting at Frederick; Dr. Cohen elected President.

Deaths: Drs. W. R. Handy, at Baltimore, æt. 46; W. B. Keene, in Louisiana, April 9, æt. 82; R. H. Archer, in Harford County, May 19, æt. 81.

1858. 310 deaths from smallpox in city; total vaccinated, 8576.—Maryland College of Pharmacy occupies hall of Medical and Chirurgical Faculty from 1858 to 1861, and issues a quarterly *Journal and Transactions*.—Second annual meeting of National Quarantine Convention held at Baltimore.—Dr. George W. Miltenberger becomes Professor of Obstetrics and Dr. Charles Frick of *Materia Medica* at the University of Maryland.—Annual Convention of Medical and Chirurgical Faculty held at Baltimore; occupation of new hall at 47 North Calvert Street marks the first possession by the Faculty of its own building; Dr. Joel Hopkins elected President.

Deaths: Drs. Frederick Dorsey, in Washington County, October 26, æt. 84; John A. Beucke, near Catonsville, October 14, æt. 60.

MEDICAL AND CHIRURGICAL FACULTY

1859. Maryland Inebriate Asylum founded.—Dr. W. M. Kemp elected President of National Quarantine Convention at New York City (April).—Corner-stone of Peabody Institute laid (April 16).—Annual meeting of Medical and Chirurgical Faculty held at Baltimore (June); Dr. G. C. M. Roberts elected President and holds office until his death in 1870.—First city passenger cars run on Broadway (July 12).

Death: Dr. J. Addison, at Baltimore.

1860. Population of city, 212,418; of State, 687,049.—Dr. Edward Warren, Professor of Materia Medica, and Dr. Wm. A. Hammond, of Anatomy and Physiology, at University of Maryland.—Dr. S. T. Knight invents a forceps and also a ring for fractured patella.—Dr. N. R. Smith publishes his anterior splint.—Executive Committee, Medical and Chirurgical Faculty holds an annual meeting in place of the Society (June 20).—Opening of Druid Hill Park (October 19).

Deaths: Drs. C. A. Harris, at Baltimore, æt. 54; R. H. Thomas, at Baltimore, January 15, æt. 54; C. Frick, at Baltimore, March 25, æt. 36; Joseph Roby, at Baltimore, June 3, æt. 53; B. M. Byrne, at Charleston, S. C., September 6, æt. 53.

1861. Naval Academy removed to Newport and buildings used as a hospital.—St. John's College suspended and occupied by Federal troops.—225 deaths in city from smallpox (Q.).—Baltimore Special Dispensary organized.—*Baltimore Journal of Medicine* founded by Dr. Warren; bimonthly, three numbers issued (January).—President Lincoln passes through city to Washington in disguise (February 22).—Sixth Massachusetts Regiment passes through Baltimore; first blood shed in Civil War; 4 soldiers and 12 citizens killed (April 19).—Federal troops occupy city (May 13).—Executive Committee of Faculty holds annual meeting (June 5).

MEDICAL AND CHIRURGICAL FACULTY

Deaths: Drs. A. Clendinen, at Baltimore, æt. 75; D. M. Reese, at New York, May 13, æt. 61.

1862. Dr. R. McSherry becomes Lecturer on Materia Medica in the University.—Battle of Antietam (September 17).

1863. 252 deaths from smallpox at Baltimore.—Dr. S. T. Knight procures vaccine virus by variolating the cow.—Maryland Academy of Sciences reorganized (January 22).—Battle of Gettysburg (July 1-3).

Death: Dr. S. Chew, at Baltimore, December 25, æt. 57.

1864. St. Joseph's Hospital founded at Baltimore.—436 deaths from smallpox in the city; total vaccinated, 6044.—State Vaccine Agency established.—Dr. R. McSherry becomes Professor of Practice of Medicine, Dr. C. Johnston Professor of Anatomy and Physiology and Dr. S. C. Chew Professor of Materia Medica in the University of Maryland.—Samuel Ready Orphan Asylum incorporated at Baltimore with \$360,000 endowment (February 6).—National Union Convention meets at Baltimore and renominates Lincoln for President (June 7).—Battle of Monocacy (June 9).—Slavery abolished in Maryland (November 1).

Death: Dr. John P. Mackenzie, at Baltimore, January 14, æt. 63.

1865. Hicks Hospital (named from the Governor of Maryland) founded at Baltimore.

Deaths: Drs. C. B. Gibson, at Richmond, æt. 49; W. W. Handy, æt. 80; L. Birckhead, at Baltimore, September 2, æt. 71; F. E. B. Hintze, at Wilmington, Del., October 12, æt. 62.

1866. Instruction in specialties introduced at the University of Maryland. Dr. W. C. Van Bibber delivers the first

MEDICAL AND CHIRURGICAL FACULTY

clinic there on Diseases of Children and inaugurates the outdoor department.—Naval Academy restored to Annapolis and St. John's College reopened.—Bayview Asylum (Baltimore Almshouse) east of city occupied; cost \$500,000.—New Mount Hope Asylum for the Insane erected in northern suburbs of Baltimore.—Dr. F. Donaldson, Professor of Physiology at the University.—Vaccine virus from Beaugency stock introduced.—Harford County Medical Society founded.—State Normal School opened.—Duty imposed on State Board of Health to prevent epidemics.—62 deaths from cholera at Baltimore during summer.—Baltimore Medical Association founded by Drs. Morgan, White, Curry, Dare, Neff, Jones, Eastman and Smull at the office of the Commissioner of Health (February 26).—American Medical Association begins its annual session in Concordia Opera House, South Eutaw Street, Baltimore (May 1).—Almshouse property at Calverton in the western suburbs sold for \$341,000 (October).—Peabody Institute dedicated and Library opened to the public; funds \$350,000, afterwards increased to \$1,400,000 (October 25).

Deaths: Drs. John Buckler, at Baltimore, February 24, æt. 70; Jacob S. Baer, in Frederick County, April 10, æt. 82; Thomas Owings, at Baltimore, December 18, æt. 64.

1867. Little Hawkins Point selected for site of new Marine Hospital.—Medical Society of Allegany County organized.—Washington University Medical School reorganized. Faculty: Drs. Bond, Warren, Byrd, Logan, Walls, P. A. Quinan, Hopkins and Clagett. Lectures held at northeast corner Calvert and Saratoga Streets. First session begins April 2, and lasts four months.—Special Dispensary established at 281 North Howard Street.—Independent Chair of Diseases of Women and Children founded at University of Maryland.—Maryland

MEDICAL AND CHIRURGICAL FACULTY

Academy of Sciences incorporated.—Unsuccessful attempt to found a new State Society (the "Medical Faculty") to take the place of the Medical and Chirurgical Faculty.—Second Pathological Society of Baltimore founded, Dr. W. Chew Van Bibber, President (September 27).—Johns Hopkins University and Hospital incorporated (August 24).—Medical and Chirurgical Faculty sells its building on Calvert Street (November 4).

Deaths: Drs. G. B. Smith, in Missouri, æt. 74; J. C. S. Monkur, at Baltimore, January 21, æt. 66.

1868. Hebrew Hospital begun.—Measles epidemic.—Dr. J. J. Chisolm becomes Professor of Military and Operative Surgery at University of Maryland.—Dr. A. Erich invents a pessary for procidentia uteri.—Legislature makes an appropriation of \$10,000, with which Washington University Faculty purchases and fits up for hospital and college purposes the building northwest corner Calvert and Saratoga Streets. A further appropriation of \$2500 annually is made for its maintenance. A certain number of free patients and beneficiary students to be received in return for these gifts.—Flood at Baltimore, great loss of property (July 24).—*Medical Bulletin* issued by Dr. Warren.—Maryland Eye and Ear Infirmary founded by Dr. George Reuling at corner Liberty and Barnet Streets; in 1871 removed to North Charles Street, and in 1878 to 54 Saratoga Street.

Deaths: Drs. Samuel Annan, at Baltimore, January 19, æt. 70; William Gibson, at Savannah, March 2, æt. 80.

1869. Dr. William T. Howard becomes Professor of Diseases of Women and Children and Dr. F. T. Miles of Anatomy at the University of Maryland.—Maryland Eye and Ear Dispensary founded by Dr. George Reuling.—Prof. N. R. Smith

MEDICAL AND CHIRURGICAL FACULTY

resigns Chair of Surgery at University of Maryland and is succeeded by Prof. Christopher Johnston. General Dispensary organized at same. Professor Miles gives systematic clinical instruction in Nervous Diseases at same; the first in Maryland.—Medical and Chirurgical Faculty purchases new building at 60 Courtland Street, at cost of \$5700 (September 28); occupation of same (October 27-29).

Deaths: Drs. Wm. Mosher; A. S. Piggott, at Baltimore, February 13, æt. 47; J. Fonerden, at Boston, May 6, æt. 65; J. H. O'Donovan, at Baltimore, June 18, æt. 67; R. Dungleison, at Philadelphia, October 1, æt. 71; H. W. Webster, at Baltimore, October 23, æt. 74.

1870. Population of city, 267,354; of State, 780,894.—Typhus fever at Marine Hospital; 282 cases, 42 deaths.—Baltimore Infirmary again enlarged.—Dr. Duhamel introduces hydrate of chloral in parturition.—Old Maryland Hospital, Monument and Broadway, sold with its site for \$133,318.—*Baltimore Medical Journal*, monthly, founded by Drs. Howard and Latimer (title of vol. ii, *Baltimore Medical Journal and Bulletin*).—Dr. J. R. W. Dunbar becomes President of Medical and Chirurgical Faculty for unexpired term of Dr. G. C. M. Roberts, deceased (January 20).—Medical and Chirurgical Faculty meets at Baltimore, Dr. N. R. Smith, President (April 20).—Johns Hopkins University and Hospital organized (June 13).—Semi-annual meeting of Medical and Chirurgical Faculty at Cumberland (September 13).

Deaths: Drs. Joshua I. Cohen, æt. 69; G. C. M. Roberts, at Baltimore, January 15, æt. 63; George Frick, at Dresden, March 26, æt. 76.

1871. St. Joseph's Hospital, Baltimore, incorporated.—Smallpox and scarlet fever epidemic; total vaccinated, 5364;

MEDICAL AND CHIRURGICAL FACULTY

deaths from scarlet fever, 625.—Washington University Medical School removed to northwest corner Calvert and Saratoga Streets.—German Medical Society organized.—Baltimore Eye and Ear Institute founded by Dr. J. J. Chisolm with twenty free beds.—Medical and Surgical Society founded in East Baltimore (February 23).

Deaths: Drs. C. Hamilton, in Prince George County; M. Johns, at Baltimore; J. R. W. Dunbar, at Baltimore, July 3, æt. 66; A. C. Robinson, in Baltimore County, November 9, æt. 61.

1872. 4271 cases of smallpox at Baltimore, with 896 deaths.—42 extra Vaccine Physicians appointed.—Patients transferred from old Maryland Hospital on Broadway to Spring Grove Asylum near Catonsville.—Epizoötic prevails in horses.—Dr. P. C. Williams elected President of the Medical and Chirurgical Faculty.—College of Physicians and Surgeons organized at New Assembly Rooms, northeast corner Lombard and Hanover Streets, by Drs. Warren, Opie, Lynch, Byrd, Murray and Goolrick; first session opens in October; 42 students, 18 graduates.—Total vaccinated from November 1, 1871, to November 1, 1872, 38,784.

Deaths: Drs. George S. Gibson, at Baltimore, January 30, æt. 71; Thomas E. Bond, in Harford County, August 19, æt. 58.

1873. 617 deaths from smallpox in city; total vaccinated, 87,739.—Dr. Alan P. Smith, Professor of Operative Surgery, and Dr. J. J. Chisolm, Professor of Eye and Ear Diseases, at University of Maryland.—Epidemiological Society organized with Dr. J. A. Steuart, Health Commissioner, President.—Dr. C. H. Ohr, of Cumberland, elected President of the Medical and Chirurgical Faculty.—Reception to Dr. N. R. Smith on

MEDICAL AND CHIRURGICAL FACULTY

his return from Europe.—From March, 1872, to March, 1873, there were 4931 cases of smallpox at Baltimore, with 1359 deaths (Whyte).—Prof. Christopher Johnston successfully extirpates the superior maxilla, the second time this had been done in Maryland, Jameson's case (1820) being the first.

Deaths: Drs. F. S. Coskery, at Baltimore, æt. 48; G. L. Robinson, at Baltimore, September 11, æt. 29.

1874. Homœopathic Hospital and Dispensary established at 220 North Greene Street.—Maryland State Board of Health established.—Alumni Association University of Maryland reorganized with Dr. R. S. Steuart, President.—Dr. H. M. Wilson elected President of Medical and Chirurgical Faculty. The Faculty endorses Dr. Chancellor's bill before City Council for registration of births and deaths.—Dr. A. F. Erich invents a self-retaining uterine speculum.—Legislature appropriates \$10,000 to College of Physicians and Surgeons "to erect, equip and maintain a lying-in hospital for indigent women" and \$2500 per annum for four years "to maintain said hospital," the College in return to receive indigent women from the State free and beneficiary students. With this appropriation the Maternité Hospital on Lombard Street was established, the first institution of its kind in the State. At the same time the University of Maryland receives \$30,000 conditional upon the education of beneficiary students "to aid in erecting a hospital on ground belonging to the University." With this amount the Greene Street wing of the Baltimore Infirmary or University Hospital was erected. At the same time Washington University Medical School receives \$10,000 (April 11).—Baltimore Charitable Eye and Ear Dispensary organized at No. 2 Central Avenue (April 15).

Deaths: Drs. Henry Howard, at Charlottesville, Va., March 2, æt. 81; H. A. Inloes, at Baltimore, May 28, æt. 63; D. A.

MEDICAL AND CHIRURGICAL FACULTY

O'Donnell, at Baltimore, August 26, æt. 65; A. F. Dulin, at Baltimore, November 25, æt. 68; G. E. Morgan, at Baltimore, December 1, æt. 46.

1875. Dr. J. F. Monmonier elected President of the Medical and Chirurgical Faculty.—Clinical Society of Maryland founded, with Dr. P. C. Williams first President (April 23).

Deaths: Drs. R. Mackall, at Baltimore, March 2, æt. 70; B. A. Dougherty, at New York, April 1, æt. 49; J. L. Yeates, at Baltimore, July 24, æt. 73; J. P. Mettauier, at old Prince Edward Court House, Va., November 22, æt. 88; S. B. Martin, at Baltimore, December 21, æt. 90.

1876. Yellow fever at Fells Point, 71 cases, 59 deaths; at Marine Hospital, 27 cases, 15 deaths. Dr. A. B. Arnold reports that "80 per cent. of the cases die."—City College building erected.—Dr. Henry W. Baxley leaves by his will \$15,000 to the Johns Hopkins Medical School for the foundation of a professorship.—Northeast Clinical Society of Baltimore founded, with Dr. D. S. C. Ireland first President; the meetings of this society were continued until June, 1880 (April 27).—Dr. Christopher Johnston elected President of the Medical and Chirurgical Faculty (April).—Woman's Hospital for Medical and Surgical Treatment of Diseases Peculiar to Women opened with four beds by Dr. B. B. Browne, at 211 North Eutaw Street near Madison; Dispensary connected with it. It is claimed that this was the first Woman's Hospital at Baltimore (May 10).—Library of Medical and Chirurgical Faculty reopened at 122 West Fayette Street (August 22).

Deaths: Drs. R. E. Dorsey, æt. 80; H. W. Baxley, at Baltimore, March 13, æt. 72; R. S. Steuart, at Baltimore, July 13, æt. 78; W. W. Hitt, at Vincennes, Ind., August 18, æt. 75.

MEDICAL AND CHIRURGICAL FACULTY

1877. Dr. Tiffany reports cases of colotomy.—Dr. Theobald invents a set of lachrymal probes.—Maryland Woman's Hospital established at the Maternité by Dr. A. F. Erich; affiliated with College of Physicians and Surgeons; it is claimed that this was the first special hospital for Diseases of Women in Maryland (see 1876).—City Hospital comes under control of College of Physicians and Surgeons.—Washington University Medical School and College of Physicians and Surgeons amalgamated by law and continued under the latter title. This union took place at the close of the session of 1876-77; the Act of the Legislature confirming it was passed during the winter session of 1877-78 and approved by the Governor, March 27, 1878.—Dr. A. B. Arnold, President of the Medical and Chirurgical Faculty.—Baltimore Academy of Medicine founded, Dr. R. McSherry first President; membership limited to physicians of ten years' standing (May 1).—Publication of *Maryland Medical Journal* (monthly) begun at Baltimore by Drs. Manning and Ashby (same date).—Ground broken for Johns Hopkins Hospital (June 23); first brick laid, October 13.—Presbyterian Eye, Ear and Throat Hospital opened at Baltimore (December 13).

Deaths: Drs. P. S. Kinnemon, at Baltimore, January 1, æt. 67; N. R. Smith, at Baltimore, July 3, æt. 80; G. D. Beatty, at Baltimore, October 19, æt. 39.

1878. Nursery and Child's Hospital founded.—Dr. S. P. Smith, of Cumberland, elected President of the Medical and Chirurgical Faculty.—Dr. Alan P. Smith reports 52 successive successful cases of lithotomy, 46 of which were done with his father's lithotome.—Dr. Tiffany reports successful removal of a pharyngeal polyp by temporary depression of both superior maxillæ.—Peabody Library Marble Building, begun April,

MEDICAL AND CHIRURGICAL FACULTY

1875, is finished (July); opened to public, September 30. Library room 84 x 72 feet and 56 feet in height.—Committee of Baltimore Medical Association visits Washington and urges upon Congress the importance of an investigation of the cause of yellow fever (October 28).

Deaths: Drs. H. R. Noel, in Essex County, Va., January 23, æt. 41; J. Whitridge, at Tiverton, R. I., July 23, æt. 85; Eli Geddings, at Charleston, S. C., October 9, æt. 79; P. H. Austin, at Baltimore, October 28, æt. 56.

1879. Maryland Woman's Hospital removed to a building adjoining City Hospital.—Nurses' Training School established at City Hospital; suspended after second session.—Society for Protection of Children incorporated.—Smallpox at Baltimore.—Dr. H. P. C. Wilson performs ovariectomy on a woman in the fourth month of pregnancy who went to full term and normal labor; diagnosis of pregnancy made before operation.—Dr. Tiffany reports cases of litholapaxy.—Dr. W. T. Councilman wins a prize of \$100 offered by the Baltimore Academy of Medicine for his essay on "Inflammation of the Cornea Artificially Induced."—Dr. S. C. Chew, President of the Medical and Chirurgical Faculty. The Faculty rents a hall at 122 West Fayette Street, near Park Avenue. A double card catalogue of library finished.—Thomas Wilson, of Baltimore, dies, endowing by will the Wilson Sanitarium with \$500,000 (September 2).

Deaths: Drs. T. R. Brown, at Baltimore, January 26, æt. 33; J. M. Stevenson, at Baltimore, March 6, æt. 37; J. M. Woodworth, at Washington, March 14, æt. 41; C. W. Cadden, at Baltimore, March 26, æt. 49; P. Wroth, at Baltimore, June 13, æt. 93; W. Fisher, at Pikesville, August 7, æt. 85; D. H.

MEDICAL AND CHIRURGICAL FACULTY

Lawrence, in Baltimore County, October 27, æt. 67; W. S. McPherson, at Baltimore, November 20, æt. 87.

1880. Publication of *Independent Practitioner* begun at Baltimore by Dr. H. L. Byrd.—Population of city, 332,313; of State, 934,943.—Total vaccinated, 8467.—Dr. F. West successfully performs Battey's operation, the first time in Maryland.—State Board of Health reorganized.—Dr. H. P. C. Wilson operates upon a twin intra and extrauterine pregnancy, removing the first child naturally, the second by laparotomy; mother dies on fourth day, the children said to have survived.—Dr. Theobald employs boric acid in Diseases of the Eye and Dr. J. S. Hill in Genito-urinary Diseases.—Dr. H. P. C. Wilson, President of Medical and Chirurgical Faculty.—Diplococcus pneumoniæ discovered by Dr. Sternberg, U. S. A. (September).—Sesqui-centennial celebration of founding of Baltimore by the Faculty at 122 West Fayette Street, Baltimore. Addresses by the President, Dr. Wilson, and historical papers by Drs. B. B. Browne, G. Lane Taneyhill, T. A. Ashby, E. F. Cordell and by Dr. Joseph M. Toner, Honorary Member, of Washington, D. C. (October 13).—Hospital Relief Association organized; incorporated December 18.

Deaths: Drs. W. M. Wood, at Owings' Mills, Baltimore County, March 1, æt. 70; Arthur Rich, at Baltimore, April 25, æt. 65; W. H. Keener, at Baltimore, May 21, æt. 57; J. E. P. Boulden, at Baltimore, July 18, æt. 55; L. C. Gordon, at Baltimore, October 30, æt. 29.

1881. Pennsylvania and Maryland Union Medical Society founded.—Prof. C. Johnston resigns Chair of Surgery at University and succeeded by Dr. Tiffany.—Total vaccinations, 28,838.—Smallpox epidemic begins at Baltimore (January) and continues until June, 1883.—Baltimore Monthly Medical

MEDICAL AND CHIRURGICAL FACULTY

Reunion founded, thirty members; still exists (February 10).—Dr. Frank Donaldson elected President of Medical and Chirurgical Faculty. Prof. H. Newell Martin announces and demonstrates before Faculty the "Baltimore Method" of isolating the mammalian heart in the dog. Dr. G. M. Sternberg demonstrates sputum septicæmia (see 1880) (April).—Dr. Charles G. Hill, of Arlington, the first to discover the comet (June 23, 3.15 A. M.).—Twenty-one boys die of lockjaw due to toy-pistol wounds (July 4-18).—Organization of Baltimore Medical College, a Christian school for coeducation of both sexes, by Dr. Byrd and others (August 30).—"Pink-eye" disease prevalent among horses in city (September 29).—Baltimore Oriole Festival (October 10-12).—Organization of Hospital for Women of Maryland at Baltimore.—Diphtheria prevails at Frederick City (October 26).

Deaths: Drs. L. S. Joynes, at Richmond, Va., January 18, æt. 61; S. T. Knight, at Baltimore, January 20, æt. 73; W. H. Davis, at Baltimore, January 21, æt. 80; C. Macgill, in Chesterfield County, Va., May 5, æt. 75; I. D. Thomson, at Baltimore, June 14, æt. 49; J. H. Thomas, at White Sulphur Springs, Va., July 15, æt. 67; W. T. Montgomery, at Shrewsbury, Pa., September 1, æt. 50; E. L. Howard, at Baltimore, September 5, æt. 44; J. C. Cockey, at Frederick, October 18, æt. 73; J. L. Billingslea, in Carroll County, October 23, æt. 77; J. W. S. Hank, at Baltimore, November 3, æt. 75.

1882. Dental School instituted at University of Maryland.—Anatomy Law passed by Legislature giving unclaimed bodies to the colleges for purposes of dissection.—Dr. Joseph Heighe Hill, of Kent County, murdered by eight negroes.—551 deaths from smallpox.—52 extra Vaccine Physicians appointed.—Woman's Medical College incorporated at Balti-

MEDICAL AND CHIRURGICAL FACULTY

more, the fourth in the United States and first in the South (February 24).—Enoch Pratt Library incorporated (March 30).—Dr. W. M. Kemp, President of Medical and Chirurgical Faculty. First admission of a colored practitioner to membership in the Faculty (April 12).—Nurses' Directory instituted by the Faculty (June 1).—City Health Department has spent since January 1, \$14,550 on account of smallpox (June 15).—Baltimore Eye, Ear and Throat Hospital opened (September).—Ordinance for the registration of births and deaths at Baltimore approved by the Mayor (September 9).—Mayor approves ordinance of City Council making vaccination compulsory and requiring the report by physicians of cases of smallpox, cholera, yellow fever, malignant diphtheria or scarlet fever and varioloid within 24 hours after first visit (October 24).—Discovery of white phosphorus announced at meeting of scientific association of Johns Hopkins University (November 1).—315 deaths from smallpox for the past week (December 30). Total vaccinations for year, 94,993.

Deaths: Drs. G. W. Pape, at Baltimore, January 8, *æt.* 33; S. P. Smith, at Cumberland, March 1, *æt.* 86; W. G. Register, at Baltimore, April 22, *æt.* 37; C. Albert, at Easton, June 30, *æt.* 31; J. S. Stevenson, at Baltimore, August 2, *æt.* 67; E. J. Chaisty, at Baltimore, August 16, *æt.* 68; H. Albers, at Baltimore, October 7, *æt.* 70; E. C. Coxe, at Baltimore, October 13, *æt.* 32; C. C. Cox, at Washington, November 25, *æt.* 66; J. T. Wilhelm, at Baltimore, December 26, *æt.* 43.

1883. Smallpox in City Jail causes release of 301 prisoners (January 2).—572 cases of smallpox reported in city during week ending January 6; 329 deaths from it during January.—Dedication of Presbyterian Eye, Ear and Throat Hospital, 77 East Baltimore Street (March 26).—Dr. Richard McSherry

JOHN R. QUINAN

1822-1890.

MEDICAL AND CHIRURGICAL FACULTY

elected President of the Medical and Chirurgical Faculty (April).—Organization of Maryland Pharmaceutical Association (May 8).—One hundredth Anniversary of Organization of P. E. Diocese of Maryland (May 29).—Judge Duffy decides in Baltimore City Court that city has right to enforce vaccination by fine or imprisonment, thus sustaining the ordinance of October 24, 1882 (June 6).—Smallpox epidemic ceases (July 1); 633 deaths from it during six months preceding; total cases for last 18 months, 4939, and 1184 deaths.—Enoch Pratt formally turns over to city gift of \$1,083,333.33 for Enoch Pratt Library (July 2).—One hundredth annual commencement of Washington College, Chestertown (July 12).—"Physic Hill," St. Mary's County, former residence of Drs. Dulaney and Abell, burned; loss, \$15,500 (September 15).—Maryland State Dental Association organized (October 18).—Home for Incurables incorporated (November 17).—Total vaccinations during the year by 15 regular and 103 extra Vaccine Physicians, 217,050. Expenses for regular Vaccine Physicians, \$3600; extra ditto, \$11,804.46; for virus, \$16,977.13; total, \$32,381.50, or an average of 14 9-10 cents per vaccination (Benson).

Deaths: Drs. Septimus Brown, at Baltimore, January 31, æt. 56; J. Gilman, at Baltimore, August 1, æt. 64; W. J. C. DuHamel, at Washington, August 15, æt. 56; C. McLean, at Baltimore, August 17, æt. 75; E. G. Cox, in Carroll County, August 19, æt. 63.

1884. New Quarantine Hospital opened at Little Hawkins Point; old building to be used as a pest house.—Opening of new law building at University of Maryland, Lombard and Greene Streets (February 28).—Faculties of University of Maryland School of Medicine and College of Physicians and

MEDICAL AND CHIRURGICAL FACULTY

Surgeons assume joint control of the resident medical appointments at Bayview Asylum (April 14).—Medical and Chirurgical Faculty meets at Baltimore; Dr. T. S. Latimer elected President (April 22-25).—Dr. James Dennis Pitts shoots and kills Dr. Littleton Thomas Walter, on Tangier Island, Va. (May 17).—City Ordinance 109 requiring registration of births and deaths of 1882 repealed and reënacted (May 24).—Wilson Sanitarium for Children opened near Baltimore (June 16)—Second Sanitary Council of Maryland meets at Blue Mountain Hotel (September 17).—American Academy of Medicine meets at the Johns Hopkins University (October 29).—Home for Incurables, Baltimore, dedicated at 270 East Fayette Street (November 6).—Opening of new building of Presbyterian Eye, Ear and Throat Hospital, 77 East Baltimore Street; 50 free beds (November 11).

Deaths: Drs. W. J. Piper, in Allegany County, æt. 42; R. Wright, at Centerville, April 30, æt. 84; J. J. Woodward, at Washington, August 18, æt. 50; G. Tyler, at Georgetown, August 26, æt. 72; R. Buckler, at Narragansett Pier, R. I., August 31, æt. 52; H. L. Byrd, at Baltimore, November 29, æt. 64; A. Hartman, at Baltimore, December 16, æt. 66.

1885. Total mortality of Baltimore, 8153, being annual death rate of 19.55 per 1000; white 16.80, colored 29.98. Births reported, 7740.—Councilman and Abbott first American observers to discover the Laveran organisms in the red corpuscles of the blood.—Dysentery of a very fatal kind prevails in Frederick and Montgomery Counties; 350 cases, 67 deaths.—Arrival of ship "Willie Rosenfeld," the largest vessel ever at Baltimore—Annual meeting of Faculty held at Baltimore, corner St. Paul and Saratoga Streets (May 12); Dr. J. R. Quinan elected President. Regulation of practice proposed.

MEDICAL AND CHIRURGICAL FACULTY

Women become eligible to membership.—Three fatal cases of trichiniasis at Baltimore from eating raw pork (July 26).—First electric railway in America begins running between Baltimore and Hampden (August 10).—Dr. James D. Pitts found guilty of murder in second degree for killing Dr. L. T. Walter on Tangier Island and sentenced to penitentiary for five years (September 26).—Maryland School of Veterinary Medicine opens, Dr. Ward, F. R. C. V. S., delivering the first lecture at 380 West Baltimore Street (October 1).—Baltimore University School of Medicine opens at 233-235 East Baltimore Street, with 30 students and 12 professors (same date).—Good Samaritan Hospital opened at McCulloh and Mosher Streets (October 8).—Harford County Medical Society founded at Belair, Dr. James F. H. Gorsuch, President, Dr. W. Stump Forwood, Secretary and Dr. R. D. Lee, Treasurer (November 10).—First paper mill at Baltimore (December 12).

Deaths: Drs. J. J. Moorman, in Virginia, January 18, æt. 83; D. I. McKew, at Baltimore, February 10, æt. 55; E. Foreman, at Washington, April 14, æt. 77; T. Daugherty, at Baltimore, September 15, æt. 55; R. McSherry, at Baltimore, October 7, æt. 67; E. DeLoughery, at Baltimore, November 18, æt. 79.

1886. Case of "Burking" at Baltimore.—Enoch Pratt Library opened (January 4).—Medical and Chirurgical Faculty meets at Baltimore; Dr. G. W. Miltenberger elected President.—Lunacy Bill passed (April).

Deaths: Drs. A. W. Colburn, at Baltimore; E. Schwartze, at Baltimore, March 12, æt. 80; A. M. Fauntleroy, at Staunton, Va., June 19, æt. 50; W. M. Kemp, at Baltimore, September 6, æt. 76.

MEDICAL AND CHIRURGICAL FACULTY

1887. Separate Lying-in Hospital founded at the University of Maryland.—Dr. William Osler confirms the presence and diagnostic significance of the Laveran organism in malaria (*British Medical Journal*, March 12).—Medical and Chirurgical Faculty meets at Baltimore; Dr. I. E. Atkinson elected President (April).

1888. Appeal from Medical Colleges of Baltimore in behalf of Senate Bill, No. 101, entitled "An Act for the Promotion of Medical Science by the Distribution and Use of Unclaimed Human Bodies for Scientific Purposes, through a Board created for that Purpose, and to Prevent Unauthorized Uses and Traffic in Human Bodies." This is signed by the Professors of Anatomy in all the Colleges. Says that up to present time no efficient provision has been made here for such material and the Colleges have been compelled to rely on "body-snatchers." Bill 101 provides that bodies of tramps and vagabonds be so used. The signers suggest an amendment, "that any one who was a friend of the deceased during life may claim the body for burial." "Has been in force for several years in New York and Philadelphia and has put a stop there to grave robbery."—Dr. John Morris elected President of the Faculty. Committee, Dr. R. Gundry, chairman, reports success of Faculty in its efforts to found a State Institution for Feeble-minded Children in Maryland (April).—Garrett Sanitarium for Children founded by Mrs. Robert Garrett, at Mount Airy, Md.; formally opened with twenty beds (June).

Deaths: Drs. W. E. A. Aikin, at Baltimore, May 30, æt. 81; J. S. Lynch, at Baltimore, September 27, æt. 59; F. E. Chastard, at Baltimore, October 18, æt. 83.

1889. Nurses' Training School Building erected at University of Maryland at a cost of \$10,000.—Washington County

MEDICAL AND CHIRURGICAL FACULTY

Medical Society organized at Hagerstown.—Maryland Training School for the Feeble-minded opened at Owings' Mills (February 19).—Dr. A. Friedenwald elected President of the Faculty (April 23).—Johns Hopkins Hospital opened for reception of patients. Ceremonies last from 12 M. to 6 P. M. Addresses by Governor Jackson, President D. C. Gilman, Mr. Francis T. King and Dr. J. S. Billings (May 7).—Johns Hopkins Training School for Nurses opened (October 1).—Dr. Philippe Ricord, a native of Baltimore, dies at Paris, æt. 89. Johns Hopkins Hospital Medical Society founded, Dr. Wm. H. Welch, President (October 22).—Johns Hopkins Hospital Journal Club founded (October 29).—Faculty of School of Medicine, University of Maryland, adopts preliminary examination in English, written examinations and a compulsory three-year course, to come into effect in 1891 (December).—Training School for Nurses founded at same institution (December 15).

Deaths: Drs. O. J. Coskery, at Baltimore, July 5, æt. 46; Joseph Beale, at Philadelphia, September 23, æt. 74; G. Ellis Porter, at Lonaconing, December 30, æt. 59.

1890. Population of city, 434,151; of State, 1,040,431.—Law of 1890, Chapter 622, requires every physician in the State outside the limits of Baltimore City to immediately notify the Secretary of the State Board of Health of every death occurring in his or her practice from smallpox, cholera, yellow fever, typhoid or typhus fever, diphtheria or any other disease of a contagious, infectious or epidemic character.—American Medical College Association organized at Nashville during meeting of American Medical Association, in accordance with the suggestion and call of the Baltimore Medical Colleges. Preliminary examination and three-year course of lectures to

MEDICAL AND CHIRURGICAL FACULTY

be enforced, commencing session of 1892-93.—Anatomy Law amended.—City Hospital, corner Calvert and Saratoga Streets, opened under control of Sisters of Mercy (R. C.) and connected with College of Physicians and Surgeons, which by agreement secures in perpetuity the privileges of clinical instruction in it (January 1).—Opening of Garrett Free Hospital for Children at 27 North Carey Street, Baltimore (same date).—Courses of Advanced or Post-graduate Lectures delivered at the Johns Hopkins Hospital, January to March, and continued annually.—City Ordinance of October 24, 1882, amended so as to require report of measles, whooping cough, pseudo-membranous croup and mumps (March 20).—Commissioner of Health calls attention of the profession of Baltimore to the neglect of physicians to report infectious and contagious diseases and births; Ordinance No. 102, 1884, requires monthly returns of births to him (March 29).—First observation in America of amœba coli by Dr. William Osler at Johns Hopkins Hospital (May 1, *Johns Hopkins Hospital Bulletin*).—Dr. T. A. Ashby elected President of Medical and Chirurgical Faculty (April 22).—Dr. Wm. H. Welch finds the diplococcus pneumoniæ present in all of ten cases of pneumonia. Isolates it in pure culture. "Evidence of its being the specific cause of the disease very strong" (July, *Johns Hopkins Hospital Bulletin*).—Report of second case of dysentery in which the amœba coli is found. First demonstration to a medical Society (September, H. A. Lafleur, *Johns Hopkins Hospital Bulletin*).—Southern Homœopathic Medical College and Hospital founded at Baltimore (October 22).—During the year the collection of a fund of \$100,000 is begun by the women throughout the country in order to secure equal privileges for women as for men at the Johns Hopkins Medical School. The

MEDICAL AND CHIRURGICAL FACULTY

amount raised by October 28 is \$111,300 which is then accepted by the Board of Trustees, which resolves to open the school when a fund for its establishment and maintenance shall amount to not less than \$500,000. Besides the \$111,300, the Trustees have, at this date, \$67,480.42 available, the greater part being the principal and interest of the Baxley bequest.—Abscess of liver diagnosed by finding the amœba coli in the expectoration, by Dr. Simon (November, *J. H. H. Bulletin*),—Johns Hopkins Hospital Historical Club organized, Dr. William Osler, President (November 10).—Semi-annual meeting of Faculty at Cambridge (November 11).—First experiment at Baltimore with Koch's lymph for consumption made at Johns Hopkins Hospital; eleven cases treated (December 12, *Johns Hopkins Hospital Bulletin*).—Dr. J. N. Mackenzie reports case of tuberculosis of lip (December, same).

Death: Dr. J. R. Quinan, at Baltimore, November 11, æt. 68.

1891. Three-year course of medical study becomes compulsory at the University of Maryland.—Opening of City Morgue, two-story brick building, corner President and Lancaster Streets, 18 x 40 feet, with accommodations for five bodies. Cost, less instruments, furniture, etc., \$4000 (January 16).—Dr. W. H. Welch elected President of Faculty (April 28).—Fiftieth Anniversary of Maryland College of Pharmacy; banquet at Eutaw House (April 17).—The Johns Hopkins Medical School Fund amounts to \$178,780.42 (April 30).—Addition to City Hospital, adjoining College of Physicians and Surgeons, for colored persons, four stories 24 x 101 feet (May 15).—First Commencement of Johns Hopkins Training School for Nurses; 17 graduates (June 5).—Calvert Hall, Saratoga Street opposite Little Sharp, formerly St. Peter's R. C. Church

MEDICAL AND CHIRURGICAL FACULTY

(the first R. C. Church at Baltimore), and for forty-one years occupied by Christian Brothers as a collegiate institute, purchased from Cathedral Trustees for a Homœopathic College (August 5).—Dedication of Southern Homœopathic College, Baltimore. Cost, \$16,000 in fee, improvements \$5000 to \$6000. All has been paid off by physicians, directors and friends. Veterinary and Dental Departments in prospect (October 5).—Semi-annual Meeting of Faculty at Rockville (November).

Deaths: Drs. R. Gundry, at Spring Grove Asylum, April 23, æt. 60; J. F. May, at Washington, May 1, æt. 79; C. Johnston, at Baltimore, October 12, æt. 69; F. Donaldson, at Baltimore, December 9, æt. 68.

1892. Mrs. Brune presents 400 volumes, being the library of her late husband, Dr. T. Barton Brune, to the University of Maryland Hospital.—Medical Society (ephemeral) organized at Easton.—First demonstration of gas-producing bacillus (*bacillus ærogenes capsulatus*, Welch) by Drs. Welch and Nuttall. "Case of rapid development of gas in blood-vessels after death" (March, *Johns Hopkins Hospital Bulletin*).—Dr. L. M. Tiffany, President of Medical and Chirurgical Faculty (April 26). Busts of Drs. N. R. Smith and J. Buckler presented.—Act of Assembly, Chapter 296, becomes operative (June). Boards of Medical Examiners appointed for the regular profession and for the Homœopaths. All persons commencing practice must procure license from one or other Board; otherwise they are guilty of a misdemeanor and must pay fine of from \$50 to \$200 for each offense, or in default of payment be confined to jail until fines, etc., are paid, and be debarred from receiving compensation for services rendered.—Semi-annual meeting at Easton (November 15 and 16).—Miss Mary E. Garrett gives \$306,977 to the fund for the Johns

MEDICAL AND CHIRURGICAL FACULTY

Hopkins Medical School. This with amount already on hand completes the \$500,000 endowment and entitles men and women to equal rights in the School (December 22).

Deaths: Drs. W. S. Forwood, at Darlington, January 2, æt. 61; L. H. Steiner, at Baltimore, February 18, æt. 64; A. H. Bayly, at Cambridge, March 14, æt. 77; W. C. Van Bibber, at Baltimore, December 14, æt. 68.

1893. Board of Trustees of Endowment Fund of Faculty of Physic, University of Maryland, elected.—Woman's Medical College secures building and lot corner McCulloh and Hoffman Streets (March 20).—Dr. Wm. T. Howard, Jr., reports a case of acute ulcerative endocarditis due to bacillus diphtheriticus; first recorded observation of this (April, *Johns Hopkins Hospital Bulletin*).—Dr. G. H. Rohé elected President of Medical and Chirurgical Faculty (April). Committee on Public Health appointed. Dr. Tiffany reports operations on Gasserian ganglion for facial neuralgia.—Messrs. Mendes Cohen, Henry T. Douglass and Frank H. Hambleton appointed a commission on Sewerage System of Baltimore (May 29).—Dr. James Brown catheterizes the male ureter (June 9).—Johns Hopkins Medical School opens with thirteen men and three women and fifteen teachers (October 2).—Opening of new laboratory building, University of Maryland (October 26).—Semi-annual meeting of Faculty at Annapolis (November).

Deaths: Drs. W. H. Stokes, at Baltimore, May 7, æt. 81; Thomas J. Dunott, at Philadelphia, May 20, æt. 62; E. Warren, at Paris, September 16, æt. 65.

1894. Act of 1894, Chapter 217, Code of Public General Laws of Maryland, entitled "Health," sub-title "Practitioners of Medicine" (amending Chapter 296, 1892), requires physi-

MEDICAL AND CHIRURGICAL FACULTY

cians to register with the Circuit Courts of the various counties and Baltimore City.—Dr. R. W. Johnson elected President of Faculty (April). Committee on Legislation appointed. First Report of Medical Examining Board.—Ground broken for first of group of buildings of Johns Hopkins Medical School, to be called the Woman's Fund Memorial Building, intended for an anatomical laboratory, 60 x 100 feet, three stories and attic with basement. Built of sand brick. The first in the United States erected exclusively for anatomical purposes. Cost about \$50,000. Other buildings to be erected later are laboratories of pharmacology, physiology and hygiene. The site of the group is a lot 300 x 320 feet northeast of the Hospital (April 16); the first building was ready for occupation the ensuing session.—Provident Hospital (colored) instituted on Orchard Street, Baltimore, R. W. Hall, M.D., Dean; negro medical college contemplated in connection therewith (May 16).—Smallpox appears at Baltimore; nineteen cases sent to Quarantine Hospital, of whom four die (May).—Semi-annual meeting of Faculty at Cumberland (November 21 and 22).—American Physiological Society holds convention at Baltimore (December).

Deaths: S. Teackle Wallis, Provost of University of Maryland, at Baltimore; Drs. J. F. Monmonier, at Baltimore, June 8, æt. 81; H. W. Webster, at Baltimore, August 29, æt. 64; William Goodell, at Philadelphia, October 27, æt. 65.

1895. Maternité opened at 410 West Hoffman Street by Woman's Medical College (January 24).—Medical and Chirurgical Faculty decides to purchase 839 North Eutaw Street in fee for \$10,000; 25 feet front with rear building on Linden Avenue (March 20. Afterwards No. 847 chosen instead).—Dr. S. Flexner reports to Faculty cases of peritonitis caused

MEDICAL AND CHIRURGICAL FACULTY

by the *micrococcus lanceolatus*; first report of this. Dr. J. Edwin Michael elected President (April 23).—Chapin A. Harris Memorial Fund Committee begins to erect a monument over his grave and tablets in Dental Colleges (June).—Dr. Simon Flexner describes a new organism, "*bacillus pyogenes filiformis*," from the Pathological Laboratory of the Johns Hopkins University and Hospital (November-December, *Bulletin*).—Semi-annual meeting of Faculty at Belair (November 19 and 20). Dr. Charles G. Hill succeeds to the Presidency of the Faculty on the death of Dr. J. Edwin Michael (December 7).

Deaths: Drs. W. H. Zollickoffer, at Newmarket, Va.; Caleb Winslow, at Baltimore, June 13, æt. 71; J. Edwin Michael, at Baltimore, December 7, æt. 47.

1896. Municipal Bacteriological Laboratory of Baltimore instituted through the exertions of the Faculty; Dr. William Royal Stokes assumes charge.—Book and Journal Club instituted to assist the growth of the Library of the Faculty. Clinical Laboratory opened at the Johns Hopkins Medical School.—Opening of Faculty's new building, 847 North Eutaw Street (January 11).—Dr. R. L. Randolph reports clinical and experimental study of oyster shucker's keratitis (January 20, *Johns Hopkins Hospital Bulletin*, June).—Hospital for Crippled and Deformed Children incorporated at Baltimore, Dr. R. Tunstall Taylor Surgeon in Charge; accommodations for forty with annex in Blue Ridge Mountains, Washington County (May 20).—Dr. William Osler elected President of the Faculty (April 28). Presentation of busts of Æsculapius and Hippocrates and portraits of Drs. Miltenberger and H. P. C. Wilson. Committee on General Sanitation appointed.—The University of Maryland, College of Physicians and Surgeons and Woman's Medical College adopt a compulsory four-

MEDICAL AND CHIRURGICAL FACULTY

year course (October).—Presentation of Thorwaldsen Statue of Christ to Johns Hopkins Hospital by Mr. W. W. Spence (October 14).—Semi-annual meeting at Hagerstown (November 10 and 11).—Opening of Frick Library, a section of the Faculty's Library, 847 North Eutaw Street. Addresses by Drs. S. C. Chew, of Baltimore; J. M. Da Costa, of Philadelphia, and Jos. D. Bryant, of New York; also by Mr. Reverdy Johnson. Followed by supper (December 10).

Deaths: Drs. J. M. Toner, at Cresson, Pa., July 30, æt. 71; P. C. Williams, at Baltimore, November 21, æt. 68.

1897. New University of Maryland Hospital completed and occupied.—Dr. L. F. Barker exhibits to Johns Hopkins Medical Society a new æsthesiometer (January 18).—Dr. H. A. Kelly describes a new method of catheterizing the male ureter through an open cystoscope with bladder distended with air by posture (January) (Demonstrated at St. Luke's Hospital, New York, February 4, 1898, *Johns Hopkins Hospital Bulletin*, March, 1898).—The Maryland Public Health Association founded through joint efforts of the Faculty and State Board of Health (February 17).—A department for the treatment of rabies by the Pasteur method opened at the City Hospital, Baltimore, under the auspices of the College of Physicians and Surgeons (April 13).—Dr. C. M. Ellis elected President of the Faculty (April 27).—Typhoid bacillus obtained from the blood of a typhoid fever patient during life by Dr. E. Bates Block; the fourth observer to obtain it from the living subject (June, *Johns Hopkins Hospital Bulletin*).—Semi-annual meeting of Faculty at Ocean City (September 15 and 16).—Peninsular Hospital founded at Salisbury, Wicomico County, Dr. George W. Todd, Superintendent (October 1).—Dr. Wm. T. Councilman confirms the ætiological significance of the *meningococcus*

MEDICAL AND CHIRURGICAL FACULTY

intracellularis in epidemic cerebro-spinal meningitis (November 15, *Johns Hopkins Hospital Bulletin*, February, 1898).

Deaths: Drs. J. C. Thomas, at Baltimore, November 9, æt. 64; H. P. C. Wilson, at Baltimore, December 27, æt. 70.

1898. Buildings recently completed at State Insane Hospital No. 2, Sykesville, now in use and 176 male patients there. Four new cottages to be built to accommodate 175 female insane.—Maryland Medical College and Temperance Hospital opened on Baltimore Street near Carrollton Avenue (Baltimore).—New constitution adopted by the Faculty.—New physiological and pharmacological building of Johns Hopkins University opened at Washington and Monument Streets (January).—Dr. G. Brown Miller discovers the *bacillus typhosus* in the gall bladder seven years after typhoid fever in a patient operated on by Dr. H. A. Kelly (March 19, *Johns Hopkins Hospital Bulletin*, May, 1898).—Secretary of State Board of Health reports forty local boards in State (March 12).—Baltimore Eye, Ear and Throat Hospital occupies its new building; 32 beds, 24 free and 8 private (April 1).—Dr. Harvey W. Cushing reports cases establishing the fact that acute diffuse peritonitis can be caused by the gonococcus; the first convincing evidence of this (May, *Bulletin*, May, 1899).—Dr. S. C. Chew elected Centennial President of the Faculty, April 26).—First Demonstration of combined typhoid and quartan malarial infection by Dr. Craig (October, *Bulletin*, November, 1899).—Semi-annual meeting of Faculty at Frederick (November 16-17).—United Charities Hospital founded at Cambridge, Dorchester County, Dr. B. W. Goldsborough, Chief of Medical Staff (December 28).

MEDICAL AND CHIRURGICAL FACULTY

Deaths: Drs. A. P. Smith, at Baltimore, July 18, æt. 58; William Pepper, in California, July 28, æt. 54; H. N. Martin, in Yorkshire, England, October 27, æt. 50.

1899. Centennial Year. Laboratory of Physiology, Physiological Chemistry and Pharmacology opened at Johns Hopkins Medical School.—Eugene Horwitz prize medal instituted at Johns Hopkins Medical School.—Centennial meeting of the Medical and Chirurgical Faculty held at Baltimore, April 25-28. Addresses by the Governor of Maryland and distinguished physicians from all parts of the country at McCoy Hall, Johns Hopkins University. Exhibition of portraits, etc. Clinics at the various hospitals. Banquet at Rennert's Hotel. Receptions, dinners, etc. Dr. Clotworthy Birnie elected President.

Deaths: Drs. George H. Rohé, at New Orleans, February 6, æt. 48; David Stewart, at Port Penn, Del., September 2, æt. 86.

Deaths, 1900: Drs. Wm. A. Hammond, at Washington, January 6; James T. Whittaker, at Cincinnati, June 5, æt. 57; Jesse W. Lazear, in Cuba, September 25, æt. 34.

Deaths, 1901: Drs. John R. Page, at Charlottesville, March 11, æt. 70; E. M. Schaeffer, at Baltimore, April 23, æt. 45; T. H. Buckler, at Baltimore, April 20, æt. 89.

Deaths, 1902: Drs. Joseph Wilkins, at Baltimore, February 5, æt. 78; R. C. Mackall, at Elkton, February 16, æt. 80; J. C. Earle, at Easton, May 17, æt. 78; A. Friedenwald, at Baltimore, August 26, æt. 65; William H. Crim, at Baltimore, November 15, æt. 57; M. B. Billingslea, at Baltimore, December 8, æt. 53.

APPENDIX.

PRESIDENTS.—Upton Scott, 1799-1801; Philip Thomas, 1801-1815; Ennalls Martin, 1815-1820; Robert Moore, 1820-1826; Robert Goldsborough, 1826-1836; Maxwell McDowell, 1836-1841; Joel Hopkins, 1841-1848; Richard Sprigg Steuart, 1848-1849, 1850-1851; Peregrine Wroth, 1849-1850; William W. Handy, 1851-1852; Michael S. Baer, 1852-1853; John L. Yeates, 1853-1854; John Fonerden, 1854-1855; Jacob Baer, 1855-1856; Christopher C. Cox, 1856-1857; Joshua I. Cohen, 1857-1858; Joel Hopkins, 1858-1859; George C. M. Roberts, 1859-1870; John R. W. Dunbar, 1870; Nathan R. Smith, 1870-1872; Philip C. Williams, 1872-1873; Charles H. Ohr, 1873-1874; Henry M. Wilson, 1874-1875; John F. Monmonier, 1875-1876; Christopher Johnston, 1876-1877; Abram B. Arnold, 1877-1878; Samuel P. Smith, 1878-1879; Samuel C. Chew, 1879-1880; Henry P. C. Wilson, 1880-1881; Frank Donaldson, 1881-1882; William M. Kemp, 1882-1883; Richard McSherry, 1883-1884; Thomas S. Latimer, 1884-1885; John R. Quinan, 1885-1886; George W. Miltenberger, 1886-1887; I. Edmondson Atkinson, 1887-1888; John Morris, 1888-1889; Aaron Friedenwald, 1889-1890; Thomas A. Ashby, 1890-1891; William H. Welch, 1891-1892; L. McLane Tiffany, 1892-1893; George H. Rohé, 1893-1894; Robert W. Johnson, 1894-1895; J. Edwin Michael, 1895; Charles G. Hill, 1895-1896; William Osler, 1896-1897; Charles M. Ellis, 1897-1898; Samuel C. Chew, 1898-1899.

MEDICAL AND CHIRURGICAL FACULTY

SECRETARIES.—Ashton Alexander, 1799-1801; Nathaniel Potter, 1801-1809; Samuel Baker, 1809-1813; John Arnest, 1813-1817; Patrick Macaulay, 1817-1818; Ezra Gillingham, 1818-1819; William Fisher, 1819-1821; 1826-28; George Frick, 1821-1826; John Fonerden, 1828-1834; Robert A. Durkee, 1834-1848; William H. Davis, 1848-1851; Frank Donaldson, 1851-1855; Joseph Wilkins, 1855-1856; Wm. B. Crane, 1856-1857; W. Chew Van Bibber, 1857-1859; Henry M. Wil-son, 1859-1873; Wilson G. Register, 1873-1882; G. Lane Taneyhill, 1882-1894; Joseph T. Smith, 1894-1895; John S. Fulton, 1895-1897; J. Williams Lord, 1897—.

TREASURERS.—The following is a list of those who have held the office of Treasurer taken in part from an old Treasurer's book in the Society archives. This book is of especial interest because it goes back to the very beginning of the Society and is the oldest MS. record of it extant. J. T. Shaaff, 1799-1801; Ashton Alexander, 1801-1803; Henry Wilkins, 1803-1807; John Shaw, 1807-1809; Solomon Birkhead, 1809-1811; James Smith, 1811-1817; W. W. Handy, 1817-1834; Edmund G. Edrington, 1834-1836; George S. Gibson, 1836-1838; Samuel Chew, 1838-1839; J. I. Cohen, 1839-1856; F. E. B. Hintze, 1856-1859; Judson Gilman, 1859-1861; Thomas Owings, 1861-1862; P. S. Kinnemon, 1862-1870; Judson Gilman, 1870-1883; W. F. A. Kemp, 1883-1898; T. A. Ashby, 1898—. There is a note in the MS. Archives which alludes to Dr. J. F. Monmonier as Treasurer July 4, 1863.

STOCK, ETC., OWNED BY THE FACULTY.—Purchase of stock, etc., is recorded by the various Treasurers as follows:

| | | | | |
|------|-----|-------|--|----------|
| Jan. | 1, | 1807, | 4 shares of Farmers Bank at Annapolis, . . . | \$200.00 |
| Aug. | 20, | 1807, | 1 " " " " " " . . . | 50.00 |
| July | 3, | 1810, | 8 " Com'l and Farmers Bank, Balto. . | 200.00 |
| June | 9, | 1813, | 18 " " " " " " . | 533.25 |
| May | 17, | 1814, | 6 " " " " " " . | 186.00 |

MEDICAL AND CHIRURGICAL FACULTY

| | | |
|-----------------|---|----------|
| July 2, 1817, | 30 Shares of City Bank Stock,* | \$510.00 |
| Sept., 1825, | 7 " Union Bank Stock, | 525.00 |
| Apr. 12, 1827, | 7 " " " | 528.50 |
| May 31, 1834, | 6 " " " | 360.00 |
| " 31, 1834, | 4 " Commercial and Farmers Bank, . | 100.00 |
| Apr. 1, 1842, | City 6 per cent Stock purchased by sale of Com- mercial and Farmers Bank and Bank of Bal- timore Stock, | 1375.00 |
| Sept. 25, 1854, | City 6 per cent Stock (\$100) | 99.25 |

*The City Bank must have failed for there is a note of a "final dividend" of \$38.25 paid January 26, 1843, "due since June, 1840."

LIBRARY.—The following items from the Archives relate to the library: July 5, 1830, paid Dr. Fonerden, appropriation, \$500; do., June 4, 1831, \$10; do., June 11, 1831, salary as librarian for year, \$100; do., April 25, 1831, appropriation, \$300; do., July 2, 1832, salary, \$100; do., July 30, 1832, appropriation, \$300; do., June 4, 1833, salary, \$100; do., Jan. 7, 1834, appropriation, \$130; do., May 30, 1834, appropriation, \$70; do., June 11, 1834, salary, \$50; do., June 30, 1834, salary, \$50; do., Jan. 9, 1835, appropriation, \$200; do., July 10, 1835, salary, \$50; do., sundry payments for library in 1834, \$21.25; do., Feb. 19, 1836, appropriation, \$178.75; Treasurer of Library Board, April 10, 1837, appropriation, \$130; do., Jan. 7, 1838, \$370; do., 1st insurance, July 10, 1838, \$5.25; do., May 30, 1839, appropriation, \$170.60; do., June 3, 1839, appropriation, \$40; do., Aug. 25, 1839, appropriation, \$72; do., May 30, 1840, appropriation, \$74.44; do., July 21, 1840, appropriation, \$30; do., Dec. 1, 1840, appropriation, \$26.66; do., June 4, 1841, \$6; do., July 5, 1841, \$11; do., July 28, 1841, \$5; do., Sept. 21, 1841, \$70; do., Jan. 6, 1842, appropriation, \$6.75; do., Feb. 7, 1842, \$5; do., July 12, 1842, \$50; do., Nov. 7, 1842, balance of appropriation of 1839, \$15.15; cash paid for rent of room and services of librarian, Aug. 17, 1843, \$72; Treasurer of Library Board, Feb. 15,

MEDICAL AND CHIRURGICAL FACULTY

1844, appropriation, \$20; do., appropriation, May 17, 1844, \$109.50; cash for rent of room for library, due June 21, \$75; Treasurer of Library Board, Feb. 26, 1845, appropriation, \$50; do., furniture for library, Sept. 29, 1845, \$8.75; do., expenses of removal of library, Sept. 29, 1845, \$1.56; do., rent of room, Sept. 30, 1845, \$75; do., for book-cases, Sept. 30, 1845, \$28.50; do., Oct. 29, 1845, appropriation, \$30; do., July 16, 1846, appropriation, \$75; salary of assistant librarian, Sept. 8, 1846, \$50; Library Board, June 2, 1847, appropriation, \$25; services of librarian, June 7, 1847, \$10; Library Board, Oct. 25, 1847, appropriation, \$50; do., Oct. 27, 1847, appropriation, \$40; do., April 14, 1848, appropriation, \$20; Library Board, Oct. 2, 1848, appropriation, \$50; do., Jan. 10, 1849, appropriation, \$50; do., April 11, 1849, appropriation, \$25; do., June 20, 1849, licenses of 1847, by order, \$60; do., Sept. 24, 1849, appropriation, \$50; Mercantile Library Association, one year's rent of shelves in Athenæum, Oct. 12, 1849, due Sept. 19, \$50; same, Nov. 20, 1850, due Sept. 19, \$50; Library Board, Feb. 28, 1851, appropriation, \$15; do, May 6, 1851, licenses, 1847, 1848 and 1849, by order, \$80; for book-cases at Athenæum, Nov. 8, 1851, \$48; Jas. Green, "for preparing catalogue of library," Jan. 26, 1852, \$50; Library Board, March 6, 1852, appropriation, \$170; printing 500 catalogues, March 23, 1852, \$86; Library Board, Aug. 2, 1852, appropriation, \$100; Mercantile Library, for rent of shelves (two years), Nov. 12, 1852, \$115.60; Library Board, April 11, 1853, appropriation, \$100; Library Board, May 31, 1853, appropriation, \$125; Mercantile Library Association, rent of shelves, Jan. 10, 1854, \$100; Library Board, May 31, 1854, appropriation, \$50; Mercantile Library Association, rent of shelves, Nov. 2, 1854, \$100; Library Board, Jan. 10, 1855, appropriation, \$100; Mercantile Library Association, rent of shelves, Dec. 4, 1855, \$100; do., May 12,

1857, \$100; do., Aug., 1857, \$100; Library Board, June 5, 1858, appropriation (membership fees), \$20.

LICENSES GRANTED.—The following table, compiled from the old Treasurer's book above mentioned, shows the number of licenses granted each year up to 1859: 1799-1800, eight; 1800-1801, eleven; 1802-1809, reports wanting; 1809-1810, twenty-two; 1810-1811, twelve; 1811-1812, fourteen; 1812-1813, twenty-five; 1813-1814, eight; 1814-1815, fourteen; 1815-1816, eight; 1816-1817, thirty-nine; 1817-1818, twenty-four; 1818-1819, sixteen; 1819-1820, seventeen; 1820-1821, seventeen; 1821-1822, twenty-six; 1822-1823, twenty-three; 1823-1824, thirty-one; 1824-1825, thirteen; 1825-1826, thirty-six; 1826-1827, thirty-one; 1827-1828, forty-two; 1828-1829, thirty-five; 1829-1830, twenty-six; 1830-1831, thirty-four; 1831-1832, thirty-two; 1832-1833, twenty-two; 1833-1834, twenty-five; 1834-1835, nine; 1835-1836, fifteen; 1836-1837, twelve; 1837-1838, seven; 1838-1839, ten; 1839-1840, eight; 1840-1841, none; 1841-1842, three; 1842-1843, none; 1843-1844, none; 1844-1845, one; 1845-1846, four; 1846-1847, ten; 1847-1848, six; 1848-1849, five; 1849-1850, two; 1850-1851, three; 1851-1852, three; 1852-1853, thirty-six; 1853-1854, seventeen; 1854-1855, thirteen; 1855-1856, eleven; 1856-1857, twelve (?); 1857-1858, sixteen (?); 1858-1859, one.

MEMOIRS.

UPTON SCOTT, M.D., OF ANNAPOLIS.

HIS LIFE AND LETTERS.

Somewhat over a hundred years ago there assembled in the historic senate chamber at Annapolis a body of men who were about to make an epoch in the history of Maryland. Important as it was, but little record has been left of that meeting, the first permanent organization of the medical profession of the State; but we may picture to ourselves the doctors gathering from all quarters to the capital, some by stage, some by boat, some by carriage, and some on horseback. There are Henry Stevenson, the prince of inoculators, and courtly Ashton Alexander, of Baltimore; the revered Philip Thomas, and John Tyler, the celebrated coucher of cataracts, of Frederick; John Archer, the patriarch of medical graduates, of Harford, and Charles Worthington, "the court physician," of Georgetown; the Gustavus Browns, the Edinburgh graduates, from the southern counties, and Charles Alexander Warfield, of Anne Arundel, the impetuous leader in the "Peggy Stewart" burning, and many others from the Western Shore. Then, there was the Eastern Shore contingent—the gentle Tristram Thomas, with his tall, spare figure, and brusque Ennalls Martin, the "Abernethy" of Talbot; James Moat Anderson, in his sober Methodist garb, and with his limp; James Davidson, the Aberdonian; Edward Worrell, the teacher, and Robert Goldsborough of "Four Square," and their colleagues.

MEDICAL AND CHIRURGICAL FACULTY

And when this remarkable assemblage of distinguished men was met, I can well imagine that all eyes were turned towards a venerable figure, a recognized leader even among these leaders of men, as the one most suited by character, ability and experience to fill the presidential chair. And although he endeavors to make excuses, pleading his advanced age and its infirmities as disqualifications, his preëminent fitness for the place is recognized by all, and he is unanimously elected to the office, the highest honor to which a Maryland physician has been able to aspire within the borders of the State from that day to the present time. And thus, on the third of June, 1799, under such distinguished auspices, our Medical and Chirurgical Faculty was launched on its voyage of usefulness, in which, after more than a century, it continues with ever-increasing zeal, influence and success.

Upton Scott, of Annapolis, to whom allusion has been made, was the son of Mr. Francis Scott of Templepatrick, near Antrim, Ireland, where he was born in the year 1722. After obtaining a literary training, probably at the University of Dublin, he began the study of medicine under some physician, as I conjecture, of his native county. It may have been "the honest doctor," to whom he alludes in one of his letters.

His first letter is dated March, 1747, and is from Scotland. It informs us that he has purchased for £60 a Surgeon Mate's position in one of the oldest regiments of the British service, that of Lord George Sackville. On the last day of March he reaches Barrowstoneness, where a detachment of five companies of his regiment is stationed, and enters upon his duties. While much pushed for money and "cloathes" to make a genteel appearance, he is well pleased with his surgeon, whom he finds a "discreet man, and one well acquainted in his business,"

and with his fellow-officers, most of whom were Irishmen like himself.

During the spring he accompanied his regiment to Flanders, and at the close of the campaign, which does not seem to have been productive of any engagement of moment, his regiment went into winter quarters at Breda. The season, as we learn from Sir John Pringle ("Observations on the Diseases of the Army in Camp and Garrison," London, 1752), was exceedingly unhealthy, malarial fever being so prevalent that some of the English battalions could muster only one-seventh of their men. The regiment returned shortly after to England, as his next letter is dated Folkstone, January 20, 1747½. He had at this time under care a variety of cases of venereal disease, agues, fluxes and fevers.

In his relations to his fellow-officers he seems to have displayed great tact, seeking in every way to please and give satisfaction. His small pay gave him much annoyance, and he was continually pinched for means to make a respectable showing. He laid great stress upon the proprieties of speech, deportment and dress. There is an interesting reference to the home doctor: "I am rejoic'd to hear y^t the honest Dr. is still Labouring for the good of his fellow creatures. Our Family and I believe the whole world owe him more obligations yⁿ ever they can have an Opportunity of repaying him."

In February, 1749, his regiment arrived at Glasgow, and he was able to attend the lectures of Professors Hamilton and Cullen for the short remnant of the season. For some years his regiment was now stationed in the Highlands of Scotland, engaged in constructing roads, in patrolling the hills, guarding against thieves and marauders, and preventing the carrying of arms and wearing of the Highland dress. At one time he has

MEDICAL AND CHIRURGICAL FACULTY

“bought a litle Horse about three guineas price,” for which he is to receive “a shilling p Day to Draw Gravel, besides six pence for forage.” At another time he is encamped on the banks of the Dee, forty miles from Aberdeen, the nearest town, surrounded by hills of which one could have no conception, being covered with snow even in the mildest seasons. However, he was happy, with good accommodations and plenty of everything. Thus occupied during the summer months, the regiment was withdrawn each winter to the lowlands, so that he had an opportunity, which he was quick to seize, to continue his medical studies at Edinburgh and Glasgow, with the design of taking a degree.

April 4, 1753, he writes from the latter city that he is about to stand his final examinations. He has an engagement with Mr. Horatio Sharpe, the new Governor of Maryland, to accompany him over to the New World, and is trying to dispose of his commission. He hopes before sailing, however, to obtain from Colonel Wolfe permission to visit his father for a short time “y^t I may see you once more before I set out, as God knows if ever it may be in my Power to pay you another Visit.” Dr. Scott’s diploma is dated April 10, 1753, so that he was evidently successful in these examinations. On August 22 of the same year he informs his father that he has disposed of his commission, and expects to be freed from duty, and ready to sail in a few days. He asks his father to send him a good lad to take to America as a servant and hostler. He reached Annapolis during the same summer, and from this time on his professional and business success were assured.

Favored by the patronage of the Governor, he became the court physician of the capital, and had a large practice, being called in consultation far into the surrounding country. He

MEDICAL AND CHIRURGICAL FACULTY

also held several important lucrative offices, being appointed Sheriff of Anne Arundel County in 1759; Secretary of the Governor's Council, 1763; Secretary of the Upper House of Assembly, 1768, and Secretary of Governor Eden, the last of the colonial governors of Maryland, 1770.*

Shortly after his arrival he married Elizabeth Ross, an heiress with a large estate in the neighboring county of Frederick, now Carroll.

In the midst of so much prosperity he did not forget his friends in Ireland. A letter dated October 16, 1770, evinces his affection and gratitude to his father for all the latter had done for him by enclosing a bill for £60—"my Intention being in the first place to assist you in procuring such conveniencys in Life as you may want and from your increasing Years may not be so able to procure as formerly, after this I shou'd be Glad you wou'd assist my Brother in the Education of his Boys. I have already remitted him Handsomely for this Purpose. I beg you will let my sister Peggy have Ten Guineas. Altho I am very easy in my circumstances these efforts are not made without Difficulty, but as I apprehend them necessary to

* *Maryland Palatinate*.—"The personage next in importance to the Governor was the Secretary, who as receiver and disburser of revenues resembled the Receiver-General of Durham, but to these functions he added those of Recorder and Judge of Probate, and sometimes also those of Attorney-General." * * * "In each county there was a Sheriff, who, in addition to such functions as we are familiar with, collected all taxes, held all elections and made the returns." * * * The above "were paid by fees, the amount of which was determined by the Assembly, which thus exercised some control over them." * * * "The provincial court dealt with common law chancery or admiralty." * * * "The Judges were all members of the council, to which the Secretary and other chief executive officers belonged." The Governor presided over the provincial court and council. The council sat as the Upper House of Assembly.—"Old Virginia and Her Neighbors," by John Fiske. 1897. Vol. i.

the Happiness of so near relatives I make them Cheerfully in hopes that the best use has and will be made of them."

This is his last letter to his revered parent, who must have died not long after this. Nevertheless, he continues his benefactions to his relatives from time to time, and having no children of his own, he provided liberally for the education of his nephews, particularly of John Birnie, whom he supported for three years as a medical student at London and at the University of Edinburgh. An interesting allusion to Baltimore is contained in a letter to this young gentleman of date November 20, 1773: "I have entertained some thoughts that you might possibly make a tolerably decent Livelihood in Baltimore Town, a Place distant from hence about thirty miles, which is increasing very fast in the Number of Inhabitants and in its Trade, particularly with Ireland. Now as many People from Belfast and the North of Ireland have settled there, I apprehend you might be introduced on a respectable Footing there, by getting Letters from some of the Merchants in Belfast who correspond thither, and from Dr. Holliday or Dr. Tier my old Friends, most of whom were well acquainted with your Family; the Difficulties however in succeeding will be considerable, besides those already mentioned, there being several of the Profession already settled there, who are in Possession of the Business, altho none of such Eminence as to be formidable Rivals to a man of real knowledge, accompanied with Application and Discretion."

During the American Revolution he espoused the cause of the mother country, and became a voluntary exile. Some of his letters written during this period from Belfast and London are extant. He is still assisting his family, educating and getting positions for his nephews, and in one of his letters dated

London, January 31, 1780, he expresses much concern at the capture of one of them by the Spanish.

It is noticeable that in Dr. Scott's letters during this period of exile, although he was conscientiously opposed to the action of the Colonies, he allows no unkind or hostile allusions regarding them to escape even in these private letters to his kinsfolk. This quiet self-control is characteristic of the man whose character strongly reminds us of that of Washington.

On his return to Maryland he seems to have recovered his property, and to have possessed the esteem of the community, as though no differences of opinion had ever existed. According to the late Dr. John Ridout, of Annapolis, who knew him personally and has left a short biographical sketch of him, he did not resume the practice of medicine, but "lived in elegant retirement in the discharge of his duties as a good citizen, and in the enjoyment of the respect and confidence of his fellow-citizens."

Some years after his first arrival he had erected a handsome brick residence on an eminence in the southern part of Annapolis, which is still standing. The date of its erection, 1760, is still to be seen cut on the fireplace. It was constructed after the style of an English manor-house, and surrounded by a high brick wall enclosing three acres of ground. He was very fond of horticulture, especially the culture of flowers, and took great delight in superintending the greenhouse and beautiful garden attached to his mansion. "Here, in the exercise of a generous hospitality and surrounded by attached friends, he passed a green old age, and died universally lamented February 23, 1814, in the ninety-second year of his age." His tombstone is still to be seen, and Dr. Walton has kindly sent me the inscription upon it, which confirms the above figures.

MEDICAL AND CHIRURGICAL FACULTY

Dr. Scott was a vestryman of St. Anne's parish, and a pew-holder in the church. He was also a visitor to St. John's College.

Various relics of him are preserved. Here are his letters, from which I have drawn so largely in the preparation of this brief sketch. There is one other of his letters in the possession of the Maryland Historical Society. It was written in 1809 with the trembling hand of age. It relates to the famous Tuesday Club of Annapolis, founded by Dr. Alexander Hamilton in 1745, of which he was a member. It gives an interesting account of the way in which certain wits of the ancient city sought to amuse themselves in leisure hours. You will note the neatness and care with which his letters are written, and this was characteristic of all he did. In one of them he sharply chides his sister and her son for a badly-directed letter he had received from them, expressing his humiliation in being connected with such a public exhibition of ignorance or carelessness. In another he complains of the expense of postage to which she had put him by forwarding two letters in separate enclosures instead of copying them into her own. Yet this frugality was, as we have seen, not incompatible with a generous and liberal spirit.

Here we have his medicine chest, which I presume is the same that accompanied him in his campaigns in Scotland and Flanders. Here is his diploma from the University of Glasgow. These photographs were taken from a miniature painted on ivory, and doubtless dating from the time of his exile at London (say at about the age of fifty-eight). The miniature, a pair of pistols presented to him by Colonel Wolfe, the hero of Quebec, and a portrait of Dr. Cullen, the gift of that great physician, are all in the possession of the Birnie family of Car-

MEDICAL AND CHIRURGICAL FACULTY

roll County. Here is a letter to him from Dr. Cullen, dated Edinburgh, 1773, and it is of interest, as the writer speaks of him as one of his first pupils.

Not only was Dr. Scott careful and systematic in his methods, but his letters show that he was a close observer, and that he took a deep interest in medical progress, frequently ordering new books through his agent at London, and making inquiry of his nephew as to improvements in medicine in the Edinburgh school. These qualities, with his excellent training, his experience, judgment and intelligence, seem to have fitted him in an especial manner for medical research, and we must regard it as a misfortune that he has left no records of such work. He was deeply attached to his friends, and had the happy faculty of retaining their good-will and avoiding offense, yet without the sacrifice of his own opinion and self-respect. And last, but not least, he was a man of the highest honor and integrity, qualities to which, doubtless, he owed in large measure the numerous appointments to positions of profit and distinction which he held.

JOHN ARCHER, M.B.

Of the Maryland physicians of the eighteenth century, none attained greater fame and eminence than the medical teacher, patriot and statesman John Archer, a native of Harford County in this State. He was a son of Thomas Archer, a North-Irishman, and was born near Churchville, May 5, 1741. Of the five children born to his parents he alone survived the perils of infancy, and from him all of the name in Maryland who are in any degree whatever related to the family are descended. At West Nottingham Academy in Cecil County began a life-long intimacy with his fellow-student, Benjamin Rush. In

MEDICAL AND CHIRURGICAL FACULTY

1760 he received the degree of Bachelor of Arts from Princeton College, followed by that of Master of Arts three years later. At this time he studied for the Presbyterian ministry, but was diverted from making it his vocation by his failure "to give entire satisfaction on some doctrinal points."

In the spring of 1765 he became a pupil of Dr. Morgan and the following November entered upon the first course of instruction in the College of Medicine of Philadelphia, which later became the University of Pennsylvania, under Drs. Morgan and Shippen. During the summer of 1767, between the sessions of the college, he began practice in New Castle County, Del., and his ledgers show that he met with considerable pecuniary success. At the close of his third course of lectures on the twenty-first of June, 1768, the degree of Bachelor of Medicine, the only one granted during the early years of the college, was conferred on him, together with nine other candidates. This being the first occasion of the conferring of a degree after attendance in America—an honorary degree is said to have been bestowed on an Englishman by Yale College in 1723—there was naturally some contention as to who should be the first recipient of the coveted honor. But Archer insisted upon his superior claims as preceding the others in alphabetical order, and so he was the first to graduate.

After a year spent in his former location in Delaware, declining a partnership offered by his preceptor, he settled permanently for practice in his native county in July, 1769. When the troubles with the British approached their culmination, he entered the struggle with characteristic energy, being a member of the Revolutionary Committees, 1774-76, and enrolling the first company of militia in the county. In 1776 he was commissioned Major of one of the local battalions and

MEDICAL AND CHIRURGICAL FACULTY

was also elected a member of the State Constitutional Convention. From 1777 to 1790 he was a Commissioner of Peace and part of the time also Judge of the Orphans' Court. During all this time he was engaged in laborious practice, his field of work embracing several counties of Maryland and even the adjoining section of Pennsylvania.

For about twenty-five years succeeding the Revolution, Dr. Archer was perhaps the most popular medical teacher in the State, rarely having less than half a dozen young men under his instruction. For the accommodation of these he built on his lawn a substantial stone building, in which they read their medical books, and held the meetings of their Society.* The older students were allowed to accompany him on his professional rounds and to compound the medicines ordered. In time they had exclusive charge of the less obscure and complicated cases.

In 1797 he was chosen Presidential Elector on the Jefferson ticket. In 1799 he and his son, Dr. Thomas Archer, took part as Charter Members in founding the Medical and Chirurgical Faculty, and he was chosen one of the first Board of Examiners.

In 1800 he was elected to Congress, and two years later he was reelected. While a resident of Washington City, he was called in consultation to many difficult cases by the physicians of the capital, and is said to have made the observation, "that in the early stages of whooping-cough vaccination will so modify the disease that its course is rendered comparatively harmless." According to his grandson and biographer, "he also contrived and used, in cases of fractured femur, the appa-

* For the records of this Harford Medical Society, see the *Bulletin of the Johns Hopkins Hospital*, August-September, 1902.

ratus which afterwards became famous as "Physick's modification of Desault's apparatus."

At this time his letters begin to hint of approaching senility and of the necessity of his investigating what would best agree with him, "who once knew no difference in any kind of diet; who could eat anything without fear, that was suitable for nutrition." Nevertheless, at the close of his service in Congress in 1804 he resumed his practice. A few years later he had a severe fall, followed by rheumatic symptoms and partial paralysis and he was compelled to abandon all active employment. Towards the end asthma set in and he died suddenly, sitting in his chair, on the twenty-eighth of September, 1810. His remains were interred in the Presbyterian graveyard at Churchville, and a marble-slab marks the spot where they repose.

Dr. Archer married in October, 1766, Catherine, the daughter of Thomas Harris, of the family after whom Harrisburg was named, but then living in Maryland. For that purpose he came on to his native county from Philadelphia, where he was pursuing his medical studies. To her he left by his will, dated September 23, 1808, all his estate, to be divided equally among his children on her death or marriage. His real estate consisted of 700 acres in one body. He directed that his executors should release those of his debtors whom they should judge unable to pay. Thus accounts to the amount of several thousand dollars were stricken out. His male slaves were to be set free at thirty years of age and his females at twenty-five.

Dr. Archer's wife bore him ten children, six of whom, all sons, survived to adult life. Five selected medicine as a profession, studying with him at "Medical Hall." The youngest

MEDICAL AND CHIRURGICAL FACULTY

of these, George Washington, died while a student. The other four, Thomas, Robert Harris, John and James, completed their studies at the University of Pennsylvania and practiced their profession. James removed to Mississippi, where he married and died early, leaving no descendants. The youngest son, Stevenson, studied law and became Chief Justice of Maryland, Member of Congress, and in 1817, by President Madison's appointment, Judge of the Mississippi Territory with gubernatorial powers. There are many descendants of Dr. Archer living in Maryland, Virginia, Pennsylvania, Texas, Mississippi, Tennessee, Louisiana and even in remote Washington. Many served with distinction in the Southern army during the Civil War.

The Medical and Chirurgical Faculty is in possession, through the liberality of his grandson, Dr. George W. Archer, of Emmorton, Harford County, of several relics of Dr. Archer, as his academic diplomas from Princeton, his medical diploma from the Philadelphia College, his pestle and mortar, his ledgers and note-books, and an oil painting made at Baltimore by a Mr. Harrison in 1802 for Dr. Thomas Archer. The last is said to be a very fine likeness. It is from it that the portrait in this volume was copied.

Dr. Archer is represented as having been considerably above the medium height, with great bodily strength and a large share of moral and physical courage. His mind was of the combative order, and although a throat affection had converted his voice into a gruff whisper, he did not refrain from personal controversy. With a vigorous intellect and a good mental training, he entered with zeal into the excited political arena of the day. Though an earnest party man, he never surrendered his independence or his convictions of duty. In

CHRISTOPHER JOHNSTON

1822-1891.

a word he was one of those bold, straightforward, self-reliant natures who exercise among their fellow-men great influence by reason of their innate force of character and incorruptible integrity.

Dr. Archer left but few contributions to medical literature; this resulted partly from his aversion to writing and partly from his indifference to reputation. His fame as a physician must therefore rest mainly on "a few desultory pages hastily thrown off amid the distracting hubbub of war and politics." His contributions appeared chiefly in the New York *Medical Repository*. In one of these he describes a case in his practice of a white woman who gave birth to twins, one white, the other black. She was the wife of a toll-gate keeper and confessed that after her husband had left her bed early in the morning, a negro had entered her room and cohabited with her. In another, he tells of a man whose stomach was cut open by a cobbler, the corn-bread and cabbage rolling out upon the floor. While waiting for Dr. Archer, the cobbler sewed up the wound himself with a wax-end. The Doctor let it remain and the patient recovered. About the close of the eighteenth century he recommended seneka root as a valuable remedy in the treatment of croup and it was adopted by the physicians throughout the country with great success, and great increase of the proposer's reputation. He expedited the cure "by dipping a cloth in a hot decoction of the seneka, to be held frequently near the patient's mouth and nose, that the vapor may be inhaled and come in contact with the membrana trachealis." He found by experience, and was the first to teach, that the proper time to repeat the Peruvian bark to prevent the return of the fever is the seventh or eighth day. He was much addicted to the use of alkalis (absorbents) on the ground that disease is often due

MEDICAL AND CHIRURGICAL FACULTY

to acrid secretions in the *primæ viæ* which may be neutralized by these agents. Especially in yellow fever did he insist on their value to counteract the septon which gained entrance with the saliva, water and food and fermented in the stomach. The reaction of this septon he had found to be acid, and therefore he gave very large doses of alkalis with laxatives and laxative injections until the stools ceased to be fetid when he administered bark. Dr. George W. Archer points out how closely this treatment, recommended more than a hundred years ago, corresponds with that so strongly advised by Sternberg and others on the same grounds at the present day.

Those desiring further information regarding the life and character of this great Maryland physician are referred to the very interesting and authoritative biographical sketch by Dr. George W. Archer, of Emmorton, published in the *Bulletin of the Johns Hopkins Hospital*, for August-September, 1899, which contains a number of characteristic anecdotes of Dr. Archer and copious extracts from his letters.

ENNALLS MARTIN, M.D.

Ennalls Martin, M.D., the son of Thomas Martin (4th), and Mary Ennalls, his wife, was born at "Hampden," his ancestral home, in Talbot County, Md., August 23, 1758. At a very early age he was sent to Newark Academy, Delaware, where he distinguished himself as a Latin and Greek scholar. His two classmates during this period were General Stratton, of Pennsylvania, who settled on the Juniata, and Robert Smith, of Baltimore, who became Secretary of the Navy during Jefferson's administration. After finishing the usual course at the Newark school his father took him to Philadelphia and placed him, at the age of nineteen, in the care of Dr. William

MEDICAL AND CHIRURGICAL FACULTY

Shippen, the celebrated anatomist, then Surgeon-General of the Continental Army. By the latter Martin was assigned to duty in the apothecary department, which was partly under his direction. As the army at that time was greatly in need of surgeons, particularly for the hospitals, and as young Martin proved himself an apt scholar, he received a commission from Congress as Hospital Surgeon's Mate, with the understanding that he was to attend the medical school at Philadelphia, conducted by Professors Shippen, Rush and Kuhn. He was stationed at once at Bethlehem Hospital, which was large and commodious and as well adapted for the purpose as any building then available. Here he remained for five years, attending each winter during that time the course in the medical school and receiving the degree of M.B. in 1782. Meanwhile he was appointed Demonstrator of Anatomy by Shippen. He applied himself with great zeal to his anatomical work and soon became a skillful dissector, and sometimes even took Shippen's place when the latter was called away by other duties. He used to say, however, that he had the greatest difficulty in obtaining subjects. Stationed at Bethlehem with Dr. Martin, also as Surgeon's Mate, was Dr. William Currie, who wrote a great deal upon yellow fever and other diseases prevailing at Philadelphia and vicinity. The two thus contracted a firm friendship which lasted as long as they lived. During his five years' service Dr. Martin never left his station but twice—once to visit his father, who was an extensive farmer, tobacco planter and tanner, and again to go on to Saratoga to bring on the sick and wounded after Burgoyne's defeat. Dr. Martin used often to say that his stay at Bethlehem Hospital was one of the most agreeable episodes of his life. He also added that he fared well while there, having

MEDICAL AND CHIRURGICAL FACULTY

good facilities for procuring game. Having obtained the degree of Bachelor of Medicine from his alma mater, in the year 1782 he returned to his native State to settle in practice at Talbot Court House, afterwards called Easton. He was there thrown among a large circle of relations and acquaintances, and soon became the leading physician of the place, although there were two other physicians who had been engaged in practice there for years. His field was not confined to Talbot County, but soon extended to the surrounding counties—Queen Anne's, Caroline and Dorchester—and he was often called to these in consultation. His relations with the physicians in all this section were always pleasant and agreeable.

When Dr. Martin graduated at the Philadelphia College with the degree of M.B., it was his intention to return the following year and take the M.D degree. But the attractions of practice proved too strong, and he did not go back. In 1818 the University of Maryland conferred upon him the honorary degree of M.D.

When he was about to leave Philadelphia Dr. Shippen did everything to induce him to remain, and even offered to make him Adjunct Professor of Anatomy and give him an interest in his practice. But Dr. Martin was certain that he could get a much better practice in Talbot County, and affairs were very gloomy at Philadelphia just after the Revolution.

Soon after his arrival at Easton, Dr. Martin engaged in the political strife of the day and drew around him many friends of his party. He also made many bitter enemies in the opposite party, and it was not long before his practice began to suffer in consequence. He was a constant contributor to the little party paper which was published in the town and was

the cause of much strife and ill-feeling on both sides. Had it been known that he was the author of the papers, entitled "The Grand Caucus Man"—a comic farce—his life would have been in much danger.

Notwithstanding this diversion he applied himself with great enthusiasm and assiduity to his professional duties, and being six feet high and a man of great bodily strength, he was able to bear a great amount of fatigue. While naturally fond of study and retirement, he was a good companion. He was well read in medicine and delighted to converse on medical topics, especially surgery, in which he chiefly delighted. He kept up a large correspondence with the most eminent men of the American profession—Rush, Hosack, Mitchell, Miller, etc.—and was an occasional contributor to the *Medical Repository*, the only medical periodical at that time published in the country. His fame was not confined to his native State.

He was unquestionably a skillful and able practitioner, tenacious of his opinions when once his mind was made up, yet ever ready to yield when convinced of error. Although a zealous follower of Rush in the heroic and drastic methods practiced by this "Father of American Medicine," the epidemic of 1813-14 altered greatly his estimate of the lancet. He continued to advocate it, however, although insisting upon its judicious and moderate employment. The following instance is related as showing his inflexibility of purpose: "He received a very pressing invitation to see F. in consultation on Mrs. F. in the adjoining county of Queen Anne. The patient, who was suffering with pneumonia, was being treated by Dr. T. of Queenstown with warm toddy, etc. As soon as Dr. Martin had thoroughly examined her he proposed the use of the lancet. The attending physician at once objected, and with

MEDICAL AND CHIRURGICAL FACULTY

great warmth said, 'Sir, I am treating the case according to your published opinion.' In vain Dr. Martin tried to convince him by argument that this case differed from the epidemic of 1813-14 to which the other had referred. Both became excited, and the result was that the poor woman was left to her toddy and soon died. Dr. Martin often spoke of the case and never without deep regret."

When his patients were ill he was always in great distress. When he had decided what they should take, it was useless for them to object. He has been known repeatedly to take a recalcitrant patient by the nose and force the medicine down his throat, and this not only in the case of children, but adults. His bluntness and brusqueness caused his patients to fear him and gained for him among his colleagues the soubriquet of "Abernethy of Talbot." He was the first to introduce vaccination into Talbot, and by his strong force of will to overcome the prejudice against it.

He was devotedly fond of agriculture, and gave a considerable part of his time to the scientific cultivation of his lands. But he was too much given to theory to make his farming profitable. He wrote a good deal in the *Easton Gazette* on the subject, which has since been carried out, with much profit, and the county is now one of the richest and most highly cultivated in the State; indeed, for water prospects and the raising of all kinds of fruit and wild fowl it is not excelled by any in the country. Had Dr. Martin not been surrounded by a large circle of relatives and acquaintances, who freely partook of his hospitality, and had he kept out of politics and refused to make himself responsible for the debts of others, he would doubtless have amassed a large fortune.

From early life Dr. Martin was brought up in the doctrines of the Protestant Episcopal Church, and soon after settling

MEDICAL AND CHIRURGICAL FACULTY

at Easton he connected himself with the church there, and was a faithful and zealous member of it throughout his life. On the death of a favorite son, not wishing the remains to be placed in a private burial ground that might fall into other hands, he gave to the vestry of Christ Church at Easton the lot of ground in which his son was interred.

His death took place at Easton on the sixteenth of December, 1834, at the age of seventy-six, after an active professional life of over fifty-two years. He left a large family. His remains were interred in the beautiful cemetery of the town and a monument of marble was erected over them by his loving grandson, the late Robert Kirkwood Martin, a distinguished civil engineer of Baltimore. His wife, Sarah Haywood Martin, died on June 3, 1835, at the age of sixty-eight.

Dr. Martin was the biennial orator of the Medical and Chirurgical Faculty in 1807, when, by appointment, he delivered an oration on "Fever." In 1815, upon the death of Dr. Philip Thomas of Frederick, he was elected President of the Faculty and continued in that office until 1820, when he declined further election, maintaining that the officers should all be from Baltimore. He resided at Baltimore for some years and the *American Medical Recorder*, vol. ii, 1819, speaks of his being a resident here then and about to publish a work on malarial fevers. He was the author of a work, entitled "An Essay on the Epidemics in the Winters of 1813 and 1814 in Talbot and Queen Anne's County, Maryland," Baltimore, 1815. This essay was read before the annual convention of 1815. Just before his death he commenced a work on the diseases of the Eastern Shore of Maryland, but was unable to complete it. In 1808 he urged the establishment of an infirmary at Easton for the Eastern Shore.

MEDICAL AND CHIRURGICAL FACULTY

JOHN CRAWFORD, M.D.

Although now almost forgotten by the profession of this city and State, there is no name in all its annals more honorable or worthy of perpetuation than that of Dr. John Crawford, of Baltimore. His life, character and writings afford abundant material for a biographical sketch of the deepest interest. He was the second son of a clergyman in the north of Ireland, where he was born, of a highly respectable family, May 3, 1746. His father was a scholar, a man of talent and piety, who raised his children in the love and fear of God. The seeds thus sown brought forth a rich harvest of virtues in the son, the subject of this memoir. His brother, Adair, achieved eminence in England and is spoken of as "one of the most brilliant ornaments of medicine and philosophy" in that country.* John was reared among his family until the age of seventeen, when he was sent to Trinity College, Dublin, to pursue classical studies. Thence he went to the University of Leyden, which was then in high repute, and there he received the degree of Doctor of Medicine. He then made two voyages to the East Indies as Surgeon in the East India Company's service, receiving on his return the thanks of the company and a considerable sum of money for his zeal and fidelity. During these voyages he kept a diary, from which, it is said, very inter-

* I find the following notice of Dr. Adair Crawford, in the "Cyclopædia of Biography," by Parke Godwin, New York, 1880: "Physician and Naturalist. Physician to St. Thomas' Hospital and Professor of Chemistry at Woolwich. Author of several chemical works." In his lecture on "The Cause, Seat and Cure of Disease," Dr. John Crawford refers to his brother as "my revered brother * * * who was the first to ascertain by actual experiment that animal heat was derived from the air in respiration, and thus brought to a conclusion the conflicting opinions on that intricate subject." See also Professor Foster's "Lectures on the History of Physiology."

esting extracts were published in the *Edinburgh Annals of Medicine* (Q.).

About the year 1778 he was married, and shortly after (1779) received the appointment of Surgeon and Agent to the Naval Hospital on the Island of Barbadoes. This was a position of great honor, and it might also, in other hands, have proven an avenue to great wealth, for Dr. Crawford had under his control large contracts for supplying the British fleets on the West India station. But with that magnanimity and self-neglect which so often characterize men of lofty character and purpose, he cared but little for wealth and allowed opportunities for acquiring fortune to go, without even a share of their profits, to others. In the year 1780 the island was devastated by a terrible hurricane, and this afforded occasion for the exhibition of his generous and humane disposition. Amidst general ruin his property alone remained intact, and not a single medicine was left upon the island except what was in his possession. In this time of sore trial and distress, he refused to profit by the common distress, and supplied medicines and other aid to those who needed them without stint and without compensation.

In 1781 bad health compelled him to return to England. During this voyage his wife died under very distressing circumstances, leaving to him the care of two infant children. Having recovered his health he returned to Barbadoes, but soon after (1790) removed to Demerara, where he had been appointed by the States-General of the United Provinces, Surgeon-Major to that colony then in the possession of the Dutch. During his residence at Demerara the authorities conferred high honors on him, and he had frequent opportunities for the exhibition of that philanthropy which was his peculiar attribute. His house, his table and his purse were open at all

MEDICAL AND CHIRURGICAL FACULTY

times and to all. Strangers especially profited by his open-handed hospitality. But he did not neglect professional duties and interests. The Military Hospital with from 60 to 80 beds, and absolutely under his control, afforded a wide field for observation and study, and he made a large number of autopsies. An observation which he made at this time was the frequency with which abscess in the liver was found where there had been no symptoms pointing to its existence during life.

About the end of 1794 his health again gave way under the influence of bad climate, and he was obliged to return to England. Thence he went over to Holland to settle business affairs with the Dutch government. During his stay in Holland most of his time was spent at Leyden in study and research. Meanwhile Demerara was transferred to the control of the English. Although he was offered by the English government the same position which he had recently held in the colony, in the interest of his children whom he desired to be well educated, and by the solicitations of a brother-in-law who had already crossed the water, he was induced to decline the offer and embark for the United States. He arrived at Baltimore in 1796, the year the city charter was granted, and about the same time that Drs. Davidge and Potter settled here. Thenceforth, for seventeen years, Baltimore was the scene of his mature life-work.

A man of such a character and acquirements could not long remain obscure in any community. "The unaffected urbanity of his address and manners," says his biographer, "the sweet benevolence of soul, the innate dignity of mind which shone with such animated luster in every lineament of his noble, manly countenance, soon gained him the acquaintance and esteem of all whose respect is valuable of every class of his fellow-citizens." A professional career would furnish such a generous nature many opportunities for the exhibition of a

MEDICAL AND CHIRURGICAL FACULTY

humane and unselfish conduct, but such acts form but the ordinary routine of a good physician's life and their existence is only known by their being the necessary accompaniments of such a life.

Of Dr. Crawford's public acts we know more. He was a participator, if not a leader, in most of the humanitarian enterprises of his day. He was one of the founders and the most active member of the Maryland Society for Promoting Useful Knowledge, 1798. The Baltimore General Dispensary, established in 1801, owes its origin directly to him, and he continued an active manager of it until his death. He was also connected with the Hibernian Benevolent Society from the earliest period of its existence and held several offices in it. To his indefatigable exertions, perhaps, more than to those of any other individual, is the State indebted for the establishment of the Penitentiary (1802). He was one of the founders of the Bible Society of Baltimore, an association of Christians of every denomination, designed to promote the spread of the gospel among all men. He was also one of the directors of the Baltimore Library, the first institution of the sort in the city. There is extant a lecture delivered by him at the Medical College in this city, in November, 1811; it is entitled, "Introductory to a Course of Lectures on the Cause, Seat and Cure of Diseases," 8vo, pp. 51.

In November, 1812, he began another course on Natural History, on Hanover Street, continued later on Commerce Street. This course was also under the auspices of the college, and was to have been given at the college on Lombard Street, but the building was not sufficiently advanced at the time for occupation. The title of the chair which he held from the Regents of the college was Lecturer on Natural History. He was soon compelled to abandon this course, but the

MEDICAL AND CHIRURGICAL FACULTY

reasons for its discontinuance are not given. Of the lectures which he gave his biographer says: "His compositions were remarkable for correct and elegant style, and * * * displayed a soundness of erudition and a depth of research seldom equaled." Dr. Crawford's professional standing and enterprise are also shown by the part he took in the introduction of vaccination in this country. It is on record that in the summer of 1800 he received a supply of virus from Dr. Ring of London, and made successful use of it here.* This was contemporaneous with its use at Cambridge, Mass., by Dr. Waterhouse, to whom the credit is usually given of having been the first to employ it in America.

With such sentiments and such a desire to be useful to his fellow-men, it is not surprising that he drifted into an organization which holds charity to be a supreme virtue and duty. He became connected with the Masonic Order here in 1798. In this he had a wider field for the exercise of that benevolence which was a part and a very necessity of his nature. He rose at once to the highest office in his Lodge and was recognized as a leader among his brethren in the State. In 1801 he became Grand Master, having already presided at most of the meetings of the Grand Lodge during the previous two years. After this he was continuously and unanimously elected to the same office, with the exception of one year when his professional engagements compelled him to decline, to the period of his death in 1813. Some of the charges which he delivered to his brethren in the Grand Lodge have been preserved and are models of style and of Christian fervor. So highly esteemed were they by the fraternity that in order to diffuse their beneficial influence more widely they were in some instances published and distributed among the Order in other States. His

* "Ring on Cowpox," 1801, p. 496 (quoted by Quinan).

MEDICAL AND CHIRURGICAL FACULTY

numerous Masonic writings, including a work upon Masonry, which he had prepared for publication, were bequeathed by his will to his "beloved friend Nicholas Le Favre, Esq., of Philadelphia, Gentleman."

He also wrote many medical articles which are highly interesting and valuable. He was a large contributor to the *Medical and Physical Recorder*, 1808-09, edited by Dr. Tobias Watkins, the first medical journal published in Maryland. His MS. medical writings were bequeathed to Dr. William Donaldson, of Baltimore, and have nearly all been lost.

Although—and it seems strange—Dr. Crawford did not enjoy the honor of being an incorporator or founder of the Medical and Chirurgical Faculty of Maryland, he held high rank in its early councils, being censor, examiner, orator, and member of the committee appointed to publish its Transactions. He was also Chairman of the Medical Faculty of Baltimore and as such made a report on the health of the city to the City Council, February 10, 1800. He was Vice-President of the Medical Society of Baltimore and Consulting Physician to the Board of Health and City Hospital.

Dr. Crawford died at his residence, corner of Hanover and German Streets, on the morning of the ninth of May, 1813. Of the nature of his illness we are not informed, but it was brief and violent in character. The Grand Lodge was then in session. He attended the meeting on May 4, and delivered an annual address as usual. It is said to have been able and excellent—"the production of his rich imagination, couched in the most affectionate and parental language." At its conclusion he intimated to his brethren his wish to retire from office and pleaded in excuse for not serving longer his already lengthy services and advanced age. He then withdrew, giv-

MEDICAL AND CHIRURGICAL FACULTY

ing the Tyler an affectionate shake of the hand as he passed through the adjoining room, and remarking that the door which had just closed upon him would never again be opened for his reception. Hardly had he left the Lodge room before the members, by spontaneous act, gave him a unanimous vote of continuance.

His presentiment came true. Owing to the apprehension consequent upon the approach of the British, the Grand Lodge did not meet again until the ninth of the month. Meanwhile, on the very next day after his attendance, he was attacked with the fatal illness which terminated his life in less than four days. On the tenth of May the Grand Lodge was convened and followed his remains in sad procession to the Presbyterian graveyard, corner of Fayette and Greene Streets, where they were duly interred. In the following June a monument of sandstone and marble, carved with Masonic emblems and containing an inscription conveying the chief facts here stated, was erected in his honor.

Dr. Crawford left one child, a daughter, who married Mr. Maximilian Godefroy, an architect and the designer of many of the public buildings of this city. She went with her husband to France, and it is not known whether she had any children. Dr. Crawford's library was purchased from his widow by the Regents of the University of Maryland and formed the nucleus of the library of that institution now known, from the larger bequest of another physician, as the "Brune Collection."

The character of Dr. Crawford seems to have excited the admiration and reverence of every one who came in contact with him. His urbanity, his unselfishness, his tireless charity, his forgetfulness of injury, his genuine human sympathy, his earnest Christian piety and his social virtues, made him a

model for imitation. His scientific and professional attainments and position were conspicuous and freely acknowledged. His time, his labors, his cares and his fortune were devoted to the cause of suffering humanity. One writer says of him: "Since the days of the celebrated Howard that man has not appeared on the stage of life whose character so nearly resembled that celebrated philanthropist as Dr. Crawford." Many remarked his strong resemblance in face and form to Washington. Nor did this resemblance, which appears in his picture, stop at the exterior; there was also a close identity of sentiment, motive and character. There can be little doubt that upon a larger field of action, Dr. Crawford would have proven with equal certainty that he possessed the same elements of greatness; for greatness is not insured by the mere possession of certain qualities of mind and heart but requires an opportunity also for its exhibition.

I now direct your attention to Dr. Crawford's writings as they have come under my notice.

A strongly religious tone pervades his works; it has a genuine ring and is altogether free from cant: "There is one course I shall pursue," he says, "which has been strangely neglected by medical writers—never to lose sight of the Creator."* Speaking of the infidelity prevalent among the Faculty, he says that professional study, being directed to the physical causes and operations of the animal economy, tends to a neglect or undue appreciation of the spiritual side of life. Hence, physicians are disposed to attribute to secondary causes things which can only belong to first; and so, resting there, they lose sight of a divine cause. It cannot be that true religion and true philosophy are ever at variance with

* "Cause, Seat and Cure of Disease."

each other; on the contrary, when rightly understood they mutually and powerfully support each other. Who but the Deity, he asks, could operate the wonders that are continually pressing upon our regards? Attributed to a divine source, wonder is changed into admiration, reverence and devotion! Philosophy can never be brought to perfection unless the mind of the investigator is suitably impressed with the necessity of having his thoughts continually directed to the stupendous Author of all things. It cannot be too frequently or too strongly urged that our success will be precisely in proportion to our discovery of the designs of Him by whom the objects of our inquiry were contrived and executed.

Passing on to the more strictly medical writings—I refer particularly to those on Quarantine and on “The Cause, Seat and Cure of Disease”—in these he discusses principally the origin of disease, and it is his views upon this subject that especially rivet our attention and constitute, as I think, his title to fame. The lecture on “The Cause, Seat and Cure of Disease,” besides outlining the course which he proposes giving,* deals almost exclusively with the first of the three subjects named and in the more general way of an introductory lecture. It is in the series of the articles on Quarantine, to be found in the *Baltimore Observer*, a non-medical weekly publication, commencing November 29, 1806, and continuing to the

* “I shall first submit to your consideration a succinct account of the diseases of the human body, the causes of which have been made evident to the senses. * * * I shall then proceed to consider the cause of suffering in the animals that are in nearest connection with us, continue my inquiries through all the animal tribes down to the smallest insect as far as the means of information have been within my reach, and finally advert to the leading sources of destruction in the vegetable kingdom. I shall then revert to man, and hope to reflect the light elicited from them on what is obscure in our own species, etc.”

end of 1807, that he enters into the details of the subject and produces his facts.

Dr. Crawford first began to entertain the idea of an animated principle, a *contagium vivum*, as the cause of disease, about 1790, when he went to reside in Demerara, or Guiana. He saw there, of course, a large number of cases of malarial and yellow fever, dysentery, flux, abscess of the liver, etc. He was led to reason upon the cause of these affections, and thus, when at the close of the day the beams of the sun fell aslant upon the earth and he saw myriads of minute insects—at other times invisible—fluttering in the air, he said to himself, “If in the air why not in my air tubes? why not capable of entering the pores and openings of my body? and why not thus the conveyors of disease?”

All analogy taught that disease and decay were coincident with the presence of minute organisms. Such was the case with the putrefying flesh exposed to the air, such with the decaying fruit, such with the rotting wood, such with the moth-eaten garment, the rusted grain. If the fly lays its eggs to develop later into the crawling worm, why may not minute insects deposit their offspring in our bodies, there to develop and ravage the tissues? And he declared that this was a law of universal application, not more applicable to the lower animals than to man, and embracing the vegetable kingdom as well as the animal.* With these views he returns to Leyden;

* “There is a principle which pervades the whole circle of nature of which we should never lose sight; it is that every individual existing is more or less a type of every other, although no two things whatsoever are exactly alike” (*Baltimore Observer*, ii, 3, July 18, 1807). Again: “Previous to my attempt, I believe I may assert, there is not one who has seriously endeavored to show that there is equally one law by which every animal without any exception is undeviatingly governed” (“The Cause, Seat and Cure of Disease”).

and there, while reviewing some Dutch troops just back from a campaign in the marshes, he enunciates them to Professor Brugmans, Professor of Natural History and Botany in the University, and another physician who was present. He learns from them to his surprise that such views were not new. Yet there was no mention of them in any of the works on medicine of the day. He quotes a number which were silent on the subject. He continued this line of investigation. He became more and more convinced of the truth of this view. It was with him not a mere hint—a suggestion, a fancy, a possibility or a probability—but an overmastering conviction and the dominating principle of his life, his thought, his conduct. He seems to have realized its predominating importance, that it furnished at once the solution of a problem which had puzzled the greatest minds of the past and led to the greatest variety and absurdity of opinion. The following statements show the comprehensiveness and philosophic breadth of his mind: “We can comprehend that which is unknown by the study of that which is known;” “each disease gives rise to itself only as the seeds to their respective plants;” “diseases are first local.”

Nor was he satisfied with mere theorizing. “I shall studiously avoid offering any opinion,” he says, “when I have not an ascertained fact to support it.” And so he ransacks the whole realm of nature and marshals before the reader every fact that reading or observation could furnish in support of his views so that as we read his writings in the light of the knowledge that we now possess, there seems to be but the one conclusion which he draws. What would such a man thus overmastered by the true scientific spirit have accomplished had he lived in these latter days?

MEDICAL AND CHIRURGICAL FACULTY

He not only held these views as to the cause, but he carried them to their legitimate conclusion as to prevention and treatment. He insisted upon absolute cleanliness and all those things that go to make a perfect hygiene—pure water, pure air, pure food, proper clothing, proper sewerage, and a regulation of the habits of living, but above all and including all, cleanliness. He insisted also that the sick should be removed from, and the well prevented from going to, infected localities, infested in his view with the morbidic but invisible agents of disease. In the treatment of disease, likewise, he employed remedies with a view to their destructive effect upon the pathogenic organisms. He thus anticipated modern methods of treatment and is justly entitled to the credit of taking the first step that led to the triumphs of Lister. It is true he used the remedies that were in vogue, but he used them upon a different principle and for a different object from those which other physicians had in view. Nor were the results of these investigations to be judged only by our ability at once to control and influence epidemics. "If no other benefit should result from such an investigation, the satisfaction that must be experienced in at all comprehending the nature of what is to be done, and clearly seeing the course that ought to be pursued, will be a blessed exchange for the confusion and doubt which at present exist."

We need not be surprised to learn that he met with opposition, with ridicule, with incredulity. No doubt he was regarded as a "crank" by his medical associates, for every great reformer who has a new truth to teach has such an experience. It is probably for this reason that he sought to inculcate his views through the medium of a lay journal. There is something extremely pathetic in the conclusion of his lecture on "The

MEDICAL AND CHIRURGICAL FACULTY

Cause, Seat and Cure of Disease," 1811. He expects opposition to his view but is prepared for it, has no disquietude as to the result, and would proceed perseveringly with his investigations, hoping to convince those who were not blinded by prejudice against the truth. He was willing to make any sacrifice and to submit to any deprivation to attain this object. "Our ignorance upon this matter cannot continue always," he prophetically declares, "for it is not beyond the limits of human intelligence." Fortunately, he was supported in his purpose by a mind which did not crave luxuries, but was satisfied with the necessaries of life; his inclinations were all averse to extravagance and the plainest fare was as acceptable to him as the richest viands. Having already advanced far in his sixty-fifth year, the charms of life had largely lost their attractions and there was, therefore, no impediment to his continuing in the path which he had followed for nearly twenty years. "The difficulties I have had to encounter," he concludes, "have indeed increased my ardor. As long as health and life remain, I shall deem myself strictly in the performance of my duty whilst so employed and I shall leave the result to that august Being who has made nothing in vain and who often makes use of the humblest instruments to accomplish his all-wise purposes lest presumptuous man should assume to himself the glory which belongeth alone to God." And so within a brief space passed out of this world this good man, this wise physician; and I venture to think that no one who is engaged in the study of pathology, nay, of medicine itself, can afford to be ignorant of his name and work. (See Schultz's "History of Freemasonry in Maryland," vol. ii, 1885.)

MEDICAL AND CHIRURGICAL FACULTY

JOHN D. GODMAN, M.D.

Often the character, genius and achievements of great men are not fully appreciated until they have disappeared from the field of their earthly activity. One must have the perspective to see the full proportions of the mountain and its whole beauty. John D. Godman appears to have been an exception to this rule. His brilliant career dazzled his contemporaries, who were enthusiastic over his personal charms, his eloquence, his writings and regarded him as one of those whose fame was destined to immortality. Whilst time with its ruthless tooth has lessened considerably this estimate, there is not in the whole history of the medical profession of America a more interesting figure than that of Godman. A helpless orphaned waif, he carved his way upward against what to most men would have seemed insurmountable difficulties, supplying himself his lack of education, and achieving in spite of a delicate constitution and the insidious murmurings of a disease which finally ended his career before it had fairly reached its zenith, a distinguished place among the greatest savants of this Western World. According to all accounts his personal attractions must have been remarkable and he owed his reputation in no slight degree to the charm of his voice, and the grace of his delivery, and the wonderful command of language which enabled him to clothe his ideas in the choicest imagery.

John D. Godman was the son of Captain Samuel Godman, an officer of the Revolution, and was born at Annapolis December 20, 1794. At two years of age he lost his mother and went to Wilmington, Del., to reside with an aunt. His father died when he was five. At the age of four, his aunt went to reside at Chestertown, in Kent County, Md., where he was placed at school. He is said to have been a remarkably pre-

MEDICAL AND CHIRURGICAL FACULTY

ocious child, being able to read before he was two years of age. At the age of six he lost his devoted protector, of whose care and affection he often spoke in terms of high praise in after life, and was left to the charity of his friends and relatives. His life from now on until he was fifteen was one of sadness and friendlessness. He was deprived of his property by fraud, and to use his own words, "ate the bread of misery and drank the cup of sorrow." In some way he drifted to Baltimore where he had a sister, and became a pupil in an English school taught by a Mr. McCreary. During the winter of 1811-12 he was bound as an apprentice to a printer, an employment which was extremely distasteful and uncongenial to him, and which seriously affected his health, for in the fall of the following year he was suffering from a continual pain in the chest and a slow, burning fever, symptoms probably indicative of a tubercular infection. In January, 1814, we find him commencing the study of chemistry and entertaining the idea of attending the lectures at the University. In the fall of 1814 he enlisted as a sailor on the flotilla stationed in the Chesapeake Bay under command of Commodore Barney and was present at the bombardment of Fort McHenry. Early in the year 1815, Dr. Wm. N. Luckey, who had met him while himself a medical student at Baltimore and become "captivated by his genius and touched by his misfortunes," invited him to come to Elizabethtown, in Pennsylvania, and commence the study of medicine with him. He accepted this offer with a most grateful heart and in four days was at the house of his benefactor. "In six weeks," says Dr. Luckey, "he had acquired more knowledge in the different departments of medical science than most students do in a year. During this short period, he not only read Chaptal, Fourcroy, Cheselden, Murray, Brown, Cullen, Rush, Syden-

ham, Sharp and Cooper, but wrote annotations on each, including critical remarks on the incongruities in their reasonings." At the end of five glorious months, having exhausted the stock of the country doctor's library, his thirst for further knowledge led him back to Baltimore, where he became a pupil of Dr. Richard Wilmot Hall. The ensuing fall he began attendance upon lectures at the University under what seemed very favorable circumstances. But unforeseen events occurred, with domestic calamities, which compelled him to abandon the study of medicine for the time. In February, he writes to his friend that he is in expectation of a situation with an eminent apothecary and thus hopes to be able at some future period to recommence his studies. Although he did not obtain the expected situation, through the friendly interest of Dr. Davidge he was enabled to continue his studies, which he did through the spring and summer of 1816 with the greatest diligence and zeal. He was so far advanced that during the sessions of 1816-17, and 1817-18, he served as Dr. Davidge's Demonstrator and was thus enabled to help himself on and to attend the courses of lectures during these years. He graduated in March, 1818, the acknowledged head of his class and gaining the gold medal for the best Latin thesis presented. Says Dr. Sewall of his final examination: "The superiority of his mind, as well as the extent and accuracy of his knowledge were so apparent, that he was marked by the professors as one who was destined at some future period to confer high honor upon the profession."* During the winter preceding this event a circumstance occurred which was of the greatest advantage to him, by making known to

* "Introductory Lecture" by Thomas Sewall, M.D., Professor of Anatomy and Physiology in the Columbian College, Washington, D. C., 1830.

MEDICAL AND CHIRURGICAL FACULTY

the world his ability as a lecturer and an anatomist. It was thus described by his biographer, Dr. T. G. Richardson: "Dr. Davidge, who was the Professor of Anatomy, having met with an accident by which his thigh-bone was broken, was prevented from attending to his professorial duties for several weeks, and in the meantime it became necessary to provide a temporary substitute. The Faculty with one accord selected Mr. Godman, who, confident of his own attainments and of his ability to make a lecturer, having already acted as a demonstrator in the dissecting rooms, consented to fill the appointment, and such was the enthusiasm and eloquence of his delivery, the clearness and simplicity of his style, the forcible appositeness of his illustrations, and withal, the modesty and propriety of his deportment, that he won the applause and commendation of all who heard him."*

The necessity of providing for his immediate support led him to try a country life and he settled at New Holland, Lancaster County, Pa. After a few months spent there, he removed to the banks of the Patapsco, not far from Baltimore. Here he succeeded in obtaining practice and here made those observations in natural history which became subsequently the basis of a series of popular papers published under the name "Rambles of a Naturalist," 12mo, Philadelphia, 1833. But the stagnant life of a village doctor suited but little his active and ambitious spirit and he longed for a wider field of work.

About this time a vacancy occurred in the Faculty of the University of Maryland by the removal of Prof. William Gibson, the Professor of Surgery to Philadelphia. Godman naturally entertained a strong hope that he might be called to

* "Lives of Eminent American Physicians and Surgeons of the Nineteenth Century." By Samuel D. Gross, 8vo, Philadelphia, 1861.

MEDICAL AND CHIRURGICAL FACULTY

occupy the Chair of Anatomy which he had filled with such satisfaction while still a student. But his youth and the reputation of Granville Sharp Pattison, a Glasgow anatomist, who had unfortunately come forward as a candidate, were against him and he was disappointed. He now boldly resolved to remove to Philadelphia, the medical emporium of the day, and there strike out on his individual account as a lecturer upon anatomy. But he had hardly settled there and begun to attract attention when he had an offer from the West. Dr. Drake and others had the year before organized at Cincinnati an institution called the Medical College of Ohio, the first session of which, 1820-21, had closed with good promise for the future. Drake sought to strengthen his corps of teachers for the second session by calling a number of men of prominence from the east to his aid. Godman was offered the Chair of Surgery and accepted. Cincinnati was then a rapidly growing town of about 10,000 inhabitants and the largest west of the Alleghanies. There was but one other school in the West—that of Transylvania and the prospects for the second seemed bright. On the day of his marriage to a daughter of the distinguished artist—Rembrandt Peale—he left Philadelphia for the tedious journey over the mountains, and arrived at his destination just in time for his introductory lecture. Hardly had he delivered that before dissensions arose in the Faculty, and the class being small he handed in his resignation. He now turned to medical journalism and established the *Western Quarterly Reporter*, the first medical periodical in the West. During the brief existence of this publication more than 300 of its pages were contributions from his pen, and we have the statement of Dr. Richardson that it was conducted with signal ability. This enterprise also was abandoned after six numbers.

MEDICAL AND CHIRURGICAL FACULTY

After a year's residence at Cincinnati—time not lost but devoted to diligent study and improvement—he retraced his steps to Philadelphia, the journey being made entirely by stage. The discomforts of this trip were exceedingly great for he had shortly before starting an addition to his little family.

Arriving at Philadelphia just as the session of the University was about to open he at once hired rooms which had already been in use for anatomical instruction. Very soon he had drawn around him a large number of students and others interested in anatomical science, and he began to be called upon to deliver before various professional and non-professional audiences those beautiful addresses which were afterwards collected and published and which exhibit eloquence, research and fine reasoning power.

During the four years in which he occupied the rooms in College Avenue he made many contributions to anatomical science, most of which were published in the *Philadelphia Journal of the Medical Sciences*, the name of which was later changed to the *American Journal of the Medical Sciences*. He became one of the editors of this periodical in 1824 and continued to contribute to it until within a short time of his death. His more elaborate anatomical investigations comprising a minute account of the connections and distribution of the various fasciæ of the human body were published in a separate volume in 1824, and this was supplemented by a tract of 86 pages on "Pathological Anatomy" the following year.

Another of the fruits of his residence at Philadelphia was his researches in Natural History. On his first arrival there he became a member of the Academy of Natural Sciences, and in the Museum belonging to this Society he engaged in what he regarded as the crowning labor of his life—his work on

MEDICAL AND CHIRURGICAL FACULTY

Natural History. With indefatigable industry and perseverance he finished and published this in three octavo volumes in 1826, the first original and systematic treatise on American Natural History ever published and a worthy monument to his memory.

In the midst of his busy scientific employments Dr. Godman found leisure for several elaborate analytical and critical reviews for the *American Quarterly*, and translations from the Latin, French and German languages.

While thus engaged in so many pursuits he was called to the Chair of Anatomy in Rutgers College in New York City, where he had for his colleagues the celebrated Drs. Valentine Mott and David Hosack. He lectured with his usual success at this school during the session of 1826-27 and part of the succeeding session. But about the middle of the latter his health which had been declining for some time previous became so much impaired that he was compelled to resign his chair. Under medical advice he spent the months of February, March and April, 1828, at Santa Cruz, in the West Indies, returning to Philadelphia in May without benefit. Being now in the advanced stage of consumption he did not resume his anatomical labors, but taking a house at Germantown in the suburbs of Philadelphia, he labored with his pen for the support of his family. It was at this period, while for most of the time unable to leave his room and often too weak to sit up, that he contributed to a weekly magazine those charming papers, "Rambles of a Naturalist," to which allusion has already been made. He also continued to work for the natural history department of the "Encyclopædia Americana."

Thus situated he spent the last two years, nursed by his faithful wife and attended by his friend, Dr. Samuel Jackson.

MEDICAL AND CHIRURGICAL FACULTY

Every physician of experience is familiar with these cases and Dr. Godman's case was no exception in the strange cheerfulness characterizing them. At one time he had been an infidel but he now embraced the Christian religion and derived much solace from the hope which it confers. He worked to the last and then, on the seventeenth of April, 1830, commending his little family to God, his spirit departed from its frail and emaciated tenement. His last words were, "Lord Jesus, receive my soul."

In contemplating the life of Dr. Godman, one of its most conspicuous characteristics is his inordinate thirst for knowledge which has been likened to "the impulse of gnawing hunger and unquenchable thirst." This was as manifest during the long days of his last illness as when with the elastic step of youth and health he scoured the country, hundreds of miles, in pursuit of objects of natural history. "Day and night, winter and summer, alone in the wide world or oppressed by the cares of a family, he knew no rest, variety of occupation being the only relaxation which he sought or desired." "He loved truth for truth's sake and while ever ready and willing to impart it to others, he made no display for the purpose of applause but preferred to pass for a student even among those whom he undertook to teach. As a lecturer he was remarkably gifted, possessing an easy and natural style, simple but choice language, quick and accurate powers of illustration. His delivery was fervid and impressive and held the attention of his audiences whatever the subject. His countenance was expressive and his voice wonderfully melodious and flexible. In his favorite branch, anatomy, he seemed to know exactly the wants of those beginning its study and he was the first and only one in this country who has ever been able suc-

MEDICAL AND CHIRURGICAL FACULTY

cessfully to carry on his dissections in the presence of his class without interruption to the continuance and integrity of his lecture. This he always contended is the only true method of teaching anatomy in the amphitheatre; and with his happily constituted powers of description, and his great aptitude in handling the scalpel, the superiority of the plan was clearly demonstrated, however awkward and tedious such a course might seem when attempted by almost any one else."

"In his intercourse with society, he was characterized by great frankness and honesty of purpose, conjoined with a suavity of manner, which captivated every one with whom he was brought in contact; and the close attachment of the numerous friends who enjoyed his intimacy is a sufficient evidence of his sincerity and uprightness of heart." In a word, according to the unanimous opinion of his contemporaries and countrymen, he was "one of the most accomplished general scholars and linguists, acute and erudite naturalists, ready, pleasing and instructive lecturers and writers of his country or era. He prosecuted extensive and diversified researches, composed superior disquisitions and reviews and large and valuable volumes and he imparted a freshness and vigor to everything he touched." (The materials for a memoir of Dr. Godman are his works, Dr. Drake's memoir prefixed to "Rambles of a Naturalist," Professor Sewall's "Introductory Lecture," 1830, Professor Baxley's "Introductory Lecture," 1837, and the memoir by Dr. T. G. Richardson, in "Lives of Eminent American Physicians and Surgeons," by Professor Gross.)

HORATIO GATES JAMESON, M.D.

Few men did so much to give credit to early American Surgery as Dr. Horatio Gates Jameson, who, from 1820 to 1835

MEDICAL AND CHIRURGICAL FACULTY

or '40, carried the fame of Baltimore as a seat of medical and surgical research to all parts of the civilized world. This truly great surgeon was a native of York, Pa., where he was born in the year 1778. His father, David Jameson, also a physician, had a most interesting and adventurous career. A native of Scotland and graduate as Doctor of Medicine at the University of Edinburgh, he emigrated to Charleston, S. C., in 1740. He was accompanied on the voyage by Dr. Hugh Mercer, who settled at Fredericksburg, Va., and became a Brigadier-General in the Continental Army, losing his life, as is well known, at the Battle of Princeton in 1777. Dr. David Jameson also removed from Charleston and settled at York, Pa.; he died at Shippensburg in the same State, about the close of the century. He was a Lieutenant-Colonel in the French and Indian War and was badly wounded during that period in an engagement with the Indians. During the Revolution he was Colonel of the Third Battalion of York County Associators.* In 1842 the son gave a charming description of his home at York, in a Baltimore periodical; also an account of his father's voyage across the Atlantic, describing among its hardships, the short allowance of musty bread and foul water and the rusty salt beef doled out yet consumed by crew and passengers with avidity.

Dr. H. G. Jameson studied medicine under his father and began practice in 1795 at the early age of seventeen. On the third of August, 1797, he married Catherine Shevell, of Somerset County, Pa., where he was then living. By her he had nine children.† After his marriage he resided successively in

* Pennsylvania Archives.

† Cassandra, Elizabeth, Rush, Catherine, Alexander Cobean, David Davis, Horatio Gates and two who died in infancy. His sons were all physicians and died early, leaving no descendants. There are descend-

MEDICAL AND CHIRURGICAL FACULTY

Somerset County, Wheeling, Adamstown, Pa., and Gettysburg; removing to Baltimore about 1810. In February, 1799, he took passage at Pittsburg for Wheeling, where he spent two years and he has left an interesting account of his voyage down the Ohio and of his professional experience in the backwoods during this period.*

After his arrival at Baltimore, he attended lectures at the Medical College and graduated in 1813 from the University as Doctor of Medicine, presenting an inaugural thesis on "The Supposed Powers of the Uterus," pp. 17, which was published in accordance with the custom of the times. About this time for some years he was engaged in the business of druggist as well as physician, as we find the titles "druggist and apothecary, 16 North Howard Street," after his name in the Directory of 1812 and also his advertisement as "Chymical Manufacturer," in the *Federal Gazette* of 1815.

During the War of 1812 he held the office of Surgeon to the United States troops at Baltimore, for which service his widow received a pension after his death. In 1817 he published two lectures on "Fevers in General," 8vo, pp. 48. A paragraph in this work is of interest. Speaking of John Crawford's "Animalcular Hypothesis," he says: "It does not seem to merit notice, yet the many imperfections and diversities of opinion are sufficient * * * to humble the most aspiring genius into a cautious reserve how he attempts to trample on opinions supposed to be exploded. * * * I may safely say that with our present knowledge of this subject, nothing can be said of any practical use."

ants of his daughters at York and elsewhere. He also had a brother Thomas, who practiced at York and died at Baltimore in 1838, while on a visit to him.

* *Maryland Medical Journal*, April 15 and 22, 1899.

MEDICAL AND CHIRURGICAL FACULTY

In the same year appeared his work, entitled "American Domestick Medicine, or Medical Admonisher, containing some Account of Anatomy, the Senses, Diseases, Casualties, a Dispensatory and Glossary, in which the Observations and Remarks are Adapted to the Science in the United States. Designed for the Use of Families. Baltimore, Lucas & Co., 8vo, pp. 161 (with frontispiece)." A second and enlarged edition of this work was published in 1818.

He was Physician to the City Jail for several years; from 1814 to 1835 he was Surgeon to the Baltimore Hospital and from 1821 to 1835 he was Consulting Physician to the Board of Health.

In 1827 he joined with Drs. Samuel K. Jennings, William W. Handy, James H. Miller, Samuel Annan and John W. Vethake, in founding the Washington Medical College, the authority being derived from "Washington College of Washington, Pa."* In 1833 an independent charter was obtained from the Legislature of Maryland, and in 1839 authority was obtained from the same source giving it University rank, with departments of Literature, Law and Divinity. But this aspiration for high honors, evidently copied from the University of Maryland, was never realized, the medical being the only department ever organized. Of the Founders, Jameson was by far the best known. His fame as a surgeon gave it immediate respectability and secured for it the success of its earlier years. It is not necessary to speculate on the motives of Jameson in founding a new school at Baltimore. The jealousy with which his growing fame and success had inspired the leaders in the old school precluded any hope of entrance there and left no other means for the gratification of his very natural ambition.

* The date of the authorization was April 25.

CHARLES FRICK

1823-1860.

MEDICAL AND CHIRURGICAL FACULTY

A building was secured for the new school on Holliday Street just north of Lexington, and the introductory lecture was there delivered by Jameson. At the close of the usual four months' session "twelve gentlemen obtained diplomas, having previously attended other medical schools, after the usual private and public examinations."

In September, 1829, Dr. Jameson began the publication of a quarterly medical journal, entitled the *Maryland Medical Recorder*, "the primary object of which," he stated, was "to collect and record original views of medical subjects." He declared that he aimed at something more than mere compilation, and asked very pertinently: "Does it comport with the liberality and countenance shown by the State, for a body of six hundred educated men to pass through life, no one leaving any memorial of his existence, other than *ille fuit?*" The first number opens with an essay on typhus fever of 71 pages, "which shows great care in its preparation and is a worthy tribute to the author's talents and industry. The subject is treated in a masterly way" (Ashby). In another paper by the author, in the same number, dealing with tumors of the upper jaw, he urges the importance of an early diagnosis and the imperative duty of early removal. In most cases he thinks that ligation of one carotid is sufficient, but when the tumor is very large and vascular, or strongly resistant to the caustic, both should be tied.

The second number contains five original articles by him. Three volumes of this periodical were published altogether, the third being a semi-annual. It soon became apparent that neither the necessary literary nor pecuniary support was contributed to make this work a success, and with the number for November, 1832, it ceased its existence, as N. R. Smith's had

MEDICAL AND CHIRURGICAL FACULTY

done in the previous year. Of this venture, Dr. Ashby says: "This journal was edited with energy and ability. Its editor had enjoyed over thirty years of large and successful experience as a writer, teacher and practitioner. He was a man of wide and varied learning, a skillful surgeon and graceful writer. The *Recorder* was an honor, and its suspension a serious loss to the profession."*

In 1830, on special invitation, he visited Europe, sailing by the packet running from this port to Germany, and read before the medical section of the Society of German Naturalists and Physicians, which met in September of that year at Hamburg, a paper on the "Non-contagiousness of Yellow Fever." He was the only American delegate on this occasion and the first American to attend these meetings and felt deeply the honor of his position. His paper was read in translation at the meeting and was published on his return in his journal. During his brief stay of two months in Europe, he traveled through various European countries, staying longest at Copenhagen, to the American representative at which city he bore dispatches from our Government at Washington.

In July, 1832, he was appointed Superintendent of City Vaccination and improved the vaccine virus in use by repassing it through the cow. This was also the cholera year and must have been a period of great strain and responsibility to Dr. Jameson for he was counselor to the city in health matters and had the cholera hospitals under his charge as Consulting Physician. In this epidemic he lost his "promising son" David, aged twenty years.

In 1835, while on his return from Texas, where he had purchased lands, he received and accepted an offer of a Chair and

MEDICAL AND CHIRURGICAL FACULTY

the Presidency in the Ohio Medical College at Cincinnati. His colleagues there were Drs. Gross, Drake, Rives and J. B. Rogers, the last his late colleague at Baltimore. He removed thither with his family in October, 1835, and lectured during the ensuing session. But the ill health of his wife compelled him to return in March, 1836, and after this unfortunate move he resumed his practice at Baltimore, but he never attained the influence and prominence which he had formerly held here. On one of his journeys over the mountains of Western Virginia, he was severely injured by the upsetting of a stage and was unable to rejoin his family for months. His wife died at Baltimore in the fall of 1837, and in 1851 he married Mrs. Hannah J. D. Ely, a widow. In 1854 he left Baltimore and moved to York to spend his last days amid the scenes of his childhood. He hoped to obtain possession of his paternal home and estate, but was doomed to disappointment, and in the following year the old homestead was destroyed by fire. After a short stay at York he went to Philadelphia, where he wrote and published his book on Cholera: "A Treatise on Epidemic Cholera," 8vo, Philadelphia, 1854, pp. 286." He anticipated a large pecuniary profit from the sale of this work as it represented much research and a large personal experience of the disease. In it he gave a detailed account of the terrible epidemic of 1832 at Baltimore and maintained the non-contagious nature of the disease. With regard to the treatment recommended, it was "strictly antiphlogistic—a simple mild antiphlogistic treatment; we were successful in proportion as our practice was milder and more simplified." He lost but one patient of hundreds treated where he "had the least hope of saving when called in." It was during a visit to New York for the purpose of disposing of this book, that

MEDICAL AND CHIRURGICAL FACULTY

he was taken suddenly ill and died on the twenty-fourth of August, 1855, aged 76 years. His remains were brought back to Baltimore and interred in the Baltimore Cemetery, corner of Gay Street and Boundary Avenue. His widow survived until 1884. His last article, "handed in by its venerable author a short time prior to his death," was published in the *American Journal of the Medical Sciences*, for October, 1856.

Dr. Jameson was about five feet ten inches in height, well built, erect and muscular but not corpulent; his head was covered with a sufficiency of snow-white hair; his face was always clean shaven, his complexion florid and healthy, his eyes dark brown and piercing and surmounted by bushy eyebrows, his face remarkably smooth and free from wrinkles. He retained his strength and power of endurance to the last. He wore heavy—remarkably heavy—gold spectacles. He dressed in black with a black tie, and was very careful and neat in his appearance—no one ever saw him look untidy. He spoke German and was noted for his mechanical ingenuity.

In the *American Medical Recorder*, for January, 1829, there is an account of a remarkable trial held in the Baltimore City Criminal Court in the spring of 1828. It was the result of a suit brought by Dr. Jameson against Dr. Frederick E. B. Hintze for defamation of character. The trouble began in the winter of 1825-26, when an Association composed of Drs. Jameson, Bond, Miller, Handy, Annan and James H. McCullough, the last being a member of the Maryland Senate, was formed for the purpose of establishing a new medical school at Baltimore. Dr. Jameson was sent to Annapolis to procure a charter from the Legislature. He states that upon his arrival at Annapolis, he was shown by his colleague of the Senate, a letter from Dr. Potter, in which the latter spoke very contemptuously of himself and associates. A few days later, Drs.

Potter and DeButts went down for the purpose of opposing the application, when a controversy ensued, resulting in the publication soon after of a scurrilous pamphlet, of which Mr. Duncan Turnbull, then Demonstrator of Anatomy at the University, was the avowed author. This paper, of which 800 copies were circulated far and wide among the profession of the United States, "represented the character of Jameson in a most odious light, charging the grossest ignorance, malpractice and cruelties unheard of." Jameson declared that he had never had any dealings with Turnbull, and that the latter "had no knowledge of the cases reported by him, nor had he ever seen him (Jameson) operate." The cases which were animadverted on in the above-mentioned pamphlet, are those which gave Dr. Jameson his reputation and for which he has received unstinted praise from Professor Gross and others, colleagues and successors, both able to distinguish merit and to acknowledge it without prejudice. It will be of interest to look into the details given of these cases.

The first is that of removal of the upper jaw for tumor—the famous case of Underwood—in which a preliminary ligation of the carotid was done. It had been under the care of the most prominent Baltimore surgeons for many months, and also under Philadelphia surgeons, all of whom had declined to operate, pronouncing it beyond relief. It was the first time the operation had ever been done. It was of this case that Professor Gross wrote: "America may justly claim the honor of having led the way in extirpations of the upper jaw. Small portions, it is true, had been chipped off in the eighteenth and even in the seventeenth century; but the first grand and difficult operation of the kind of which we have any knowledge was performed in 1820 by Horatio G. Jameson, of Baltimore,

MEDICAL AND CHIRURGICAL FACULTY

who took away nearly the entire bone on one side, the roof of the antrum alone being left, as it was not involved in the disease."* It was in every respect a success and Underwood was in good health at the time of the trial. The pamphlet asserts that Jameson deserved very little credit for the result, having been advised by others, but Jameson amply disproves this by the certificates of those concerned. Speaking of the case Jameson says, with charming modesty: "I believe the treatment adopted in his case was peculiar, when viewed in all its detail and merits the most serious attention."

The second case is that of a boy on whom it is alleged the operation of lithotomy had been performed but no stone found, "a thing," said the pamphlet, "which never happened to any man living, Dr. Jameson excepted." The fact was that on opening the bladder, there was found just within its neck a hard, "fibro-cartilaginous" tumor, "about the size of a small kidney-bean," on passing a catheter over which, a grating sensation was experienced by the operator, simulating that caused by a staff or catheter impinging on a stone in the bladder. It was not thought advisable to remove this little growth and the boy recovered and remained well. Jameson furnishes the certificate of Dr. Dickson, the practitioner who assisted on the occasion, to the truth of the above statement.

The third case is that of a strong, robust servant woman, with health but little impaired, suffering from "a scirrhus of the uterus." The case had been pronounced inoperable by a consultation of seven or eight physicians at the Infirmary, on the ground that the disease extended to neighboring parts. Dr. Jameson removed the cervix uteri in May, 1824, and Drs. Chatard and Handy, who witnessed the operation, said it was

* "Centennial of American Medicine," *American Journal of the Medical Sciences*, April, 1876.

MEDICAL AND CHIRURGICAL FACULTY

well performed and as they believed warrantable. The woman died on the ninth day, and, on post-mortem examination, the body of the uterus was found to be free from malignant disease, while the ovaries were involved. There was also inflammation of the uterus and peritoneum.

The fourth case is that of a lady from the Eastern Shore with a large tumor on the neck, the nature of which was in doubt, but supposed to be cystic. In consultation with Drs. Chatard, Donaldson and Handy, an exploratory incision was agreed on with extirpation in view if practicable. The dangers of the case were fully explained and the patient expressed her willingness to undergo the operation, being a great sufferer. An incision was made and the skin was dissected back. As no important nerves or blood vessels were found to be involved in the growth, a trocar was passed into the mass; no fluid escaped. The tumor proved unmanageable, whereupon the operation was suspended. The patient died on the second day after. A post-mortem examination, made by Dr. Handy, showed that the mass, "which was partly osseous and partaking of several varieties of tumours," passed down into the chest and pressed upon the heart, and to this pressure he was disposed to ascribe her death. The physicians for the defense laid great stress on the impropriety and danger of using the trocar, but the condition of the patient seemed desperate at the start and it was deemed justifiable under the circumstances to attempt relief in this way. Besides there was no positive evidence that the trocar had hastened her death, as she had neither pain nor distress for thirty-six hours after the operation.

The next case is the attempted ovariectomy. Mrs. J., the mother of a large family, had been dropsical for about a year,

during which time she had been repeatedly tapped by Drs. Jennings and Chatard. The former pronounced it a case of ovarian disease, the latter one of ascites. The operation had latterly become necessary as often as once in twelve to fifteen days and the patient was much emaciated. Dr. Jennings pronounced the case hopeless and thought she could not survive more than two or three more tapplings. The husband continued the most urgent entreaties that something should be done, and Dr. Jennings then told him that "in his reading he had seen cases bearing a similarity to that of Mrs. J., which had been relieved by surgical operation." When this was mentioned, Mr. J.'s feelings "revolted so much" that he did not speak of it to his wife. But she overheard him telling it to his brother and urged that a surgeon should be called in, as "it was but death at any rate." Thereupon Dr. Jameson saw her and tapped her to the amount of three or four gallons, when a tumor of considerable size was seen and felt lying in the lower part of the abdomen. The movability of this tumor led to a hope that it might be pedunculated, in which case alone it would be capable of removal. She was told that an operation if undertaken would be predicated upon some three or four cases nearly similar to hers; that while in the operation, abstractly considered, there was no particular danger, in her condition there must necessarily be considerable risk, but as the case was hopeless from medical treatment, they were prepared to undertake the operation if she was willing, and that she had better take time to think the matter over. In a few days she had made up her mind to have it done. Accordingly there assembled at the house Drs. Jameson, Jennings, Chapman and a medical student. According to Dr. Jennings' testimony, the operation was done in a very deliberate and skillful man-

ner. The incision was commenced a little above the umbilicus and continued down the course of the linea alba to near the pubis, turning a little around the navel. The first incision extended no deeper than the skin; then the tendinous line was carefully opened by a number of delicate strokes of the scalpel till an opening was made and a finger put in to serve as a guide to the knife as it was carried downwards. Then the peritoneum was in like manner opened and the fingers and knife carried down to the end of the wound. Jameson now took the handle of the scalpel to try the amount of attachment, and thus a hydatid, of which there were many, was burst. This gave rise to the necessity of putting in the hand two or three times to lift out some glairy fluid which had escaped. A very small quantity of blood escaped from the same cause—not enough to endanger the patient's life. The mass was not cut into or any part of it removed, as stated in the pamphlet. The ovarian sac was not opened and there was no ovarian dropsy, but the ovary formed a large tumor, above which and attached to it was seen a great number of hydatids. During this period the operator was cool, steady and undismayed and treated the patient with all possible gentleness. While the operation was in progress the patient became extremely weak and her pulse feeble, whereupon, it being evident that the tumor could not be removed, it was suspended, the wound was dressed and the patient put back in bed. The physicians then took leave, but as they were going out, the patient sent for Dr. Jennings and asked permission to turn upon her left side. As she was doing this, she felt a fluid running out of the wound and called out in great alarm that she was bleeding to death. On turning down the bed-clothes it was found to be only water a little bloody. The patient went quickly into a swoon and died shortly after.

MEDICAL AND CHIRURGICAL FACULTY

The autopsy by Dr. Jennings showed a considerable quantity of water in the abdomen; the ovary formed a great, solid tumor, above which and attached to it was seen a great number of hydatids, the opening of one of which had caused the discharge of the fluid. "It will follow then," says Jameson, "as there was a considerable quantity of water in the abdomen, that there was a space between the peritoneum and the tumor filled with water, and hence it was that as soon as the cavity was opened a great deal of water escaped." According to the pamphlet (disproved on the trial) this woman was "happily seated" at the table with her children but a few minutes before, and her children "followed the operator as he fled from the house, shouting * * * * *." These asterisks were taken by the jury to mean "murder."

Other interesting operations were commented upon with the same severity, and, as shown by the testimony, with the same disregard of facts. Jameson took no notice of the pamphlet of Turnbull, but early in 1828 it was republished by Dr. Hintze with a short appendix, 500 copies being circulated. Urged by his friends no longer to ignore so "foul a calumny," the suit was instituted.

The result of this trial was a complete vindication of Jameson. It was shown in the clearest manner that the pamphlet was full of misrepresentations and that Turnbull knew nothing personally of the operations which he criticised so severely, basing all his charges on hearsay. As Jameson said, and as was shown conclusively, "these most cruel attempts to involve [him] in ruin emanated entirely from *professional sources*." He was fully justified in regarding Turnbull as but the mouth-piece of others who had joined in the effort to injure and destroy his professional reputation. The whole thing originated

MEDICAL AND CHIRURGICAL FACULTY

in the jealousy over Jameson's rising reputation as a surgeon and his efforts to found a new school at Baltimore. As he shows, not one of the operations which were condemned were attempted without prior consultation with physicians of the first standing. Dr. Hintze was fined \$50, which cannot but be considered a singularly fortunate escape on his part. According to Jameson, Hintze had assigned away his property to avoid the result of a decision against him.

Many of Jameson's operations were published, chiefly in the *American Medical Recorder* and in his own journal. His greatest, the upper jaw extirpation, done November 11, 1820, appeared in the former, January, 1821, with a picture of the patient just before operation. Extirpation was proposed by him when the man was seen in 1819, but declined. In the preliminary ligation of the carotid artery a fawn silk ligature was used and cut off close, the wound being then closed. He reduced a dislocation of the shoulder joint of twelve weeks' standing in 1812 by manipulation and in 1825 one of five months and nineteen days by the use of pulleys. In May, 1821, he ligated the external iliac artery for aneurism. The patient died on the ninth day. On September 2, 1822, he performed tracheotomy successfully for the removal of a watermelon seed from the windpipe. In 1824 he published an essay on stricture of the urethra and its treatment by dilatation. He also published an essay on "The Surgical Anatomy of the Neck," and another on "The Surgical Anatomy of the Parts Concerned in the Operation of Tying the Arteria Innominate, illustrated." In January, 1827, his great prize essay, entitled "Observations upon Traumatic Hemorrhage, Illustrated by Experiments upon Living Animals," was published in the *Medical Recorder*. This exhaustive research, car-

ried out on sheep and dogs, and bearing the motto "*non res fallaces, sed res probatæ*," shows the value of animal ligatures, introduced by Physick in 1814 and employed by Astley Cooper in 1817. Jameson had been using them for six or seven years and preferred buckskin. Up to date he had employed them in many amputations of limbs and mammæ, once in tying the carotid, once in tying the external iliac, twice in tying the femoral, once in tying the posterior tibial, seven times in tying the spermatic; in no instance had he had a ligature to slip, in none was there secondary hemorrhage. He had never seen anything of the ligatures after operations, and generally got healing by first intention. He wrote an article on stricture of the œsophagus, with illustrations of the probes or sounds which he employed, which was published in the *American Medical Recorder*, 1825, and reproduced in full in the American edition of "Cooper's Surgery" in October, 1828. He proposed a new method of treating extensive fistulæ in the *American Journal of the Medical Sciences* for July, 1854. In July, 1820, he published in the *Recorder* an article, entitled "Observations on the Parts concerned in Lithotomy," which was intended to prove that Mr. Pattison's idea of a Prostatic Fascia was erroneous. "This research was incidental" to a course of dissection, "designed to revive his recollections of anatomy generally," and is a good example of his thorough and laborious work. By the most minute dissection he proved that there was no such thing as "a Prostatic Fascia," and hence that Mr. Pattison's premises and practical inferences drawn therefrom, from which their author expected so much, were erroneous. He also wrote upon lithotomy, extraction of displaced lens, removal of tumor of the orbit, hernia, fistula in ano, stricture of rectum, aneurism, yellow

MEDICAL AND CHIRURGICAL FACULTY

fever, cholera, and other subjects. Dr. Gross mentions him as particularly conspicuous in devising procedures for the radical cure of hernia. His operation of amputation of the cervix uteri for scirrhus, performed in May, 1824, has been referred to. It was the first done in Great Britain or America, but had been done in Europe by Osiander in 1801 and Lisfranc in 1816. It was Jameson's intention in this case to perform a vaginal hysterectomy. From the normal mobility of the uterus he believed he would be able to draw the uterus down low enough to enable him to pass a ligature behind it by means of a double canula and wire. But he failed to get his toothed forceps into the uterine cavity, or even to get a curved needle, armed with a ligature, through the indurated cervix, and had to be content with pulling upon the vagina with tenacula and thus bringing the os into view. He believed in bleeding and antiphlogistic methods fully.

DR. GEORGE FRICK.

Among the few who devoted themselves to the practice of ophthalmology in Maryland during the first half of the nineteenth century, Dr. George Frick, of Baltimore, was by far the most distinguished. Indeed, it may be said, without disparagement to the eminent specialists who have cultivated this department in recent years, that no Maryland physician has ever held so unique a position in it as he. For his distinction lay not only in the value of his writings, but in the fact that he was the author of the first work on Ophthalmology published in America.

Dr. Frick was a man of fine culture, graduating in medicine at the University of Pennsylvania in 1815, and spending several years abroad from about 1816 to 1819, studying his spec-

ialty in the various hospitals of Great Britain and the Continent of Europe. He particularly familiarized himself with the practice of the Germans, who excelled then as since in this branch of medical science, and especially of Prof. George Joseph Beer, the highest authority of the day in Europe. During a prolonged stay at Vienna he was the recipient of much hospitality from this great teacher and enjoyed free intercourse with him.* Returning to Baltimore about 1819, he entered with enthusiasm upon the special branch of work which he had selected. He became Clinical Lecturer at the Maryland Hospital and Ophthalmic Surgeon to the Baltimore General Dispensary. On the opening of the Baltimore Infirmary, the hospital attached to the University of Maryland in the fall of 1823, one of the four wards, of which it consisted, "was reserved for eye cases, instruction in ophthalmic surgery forming a prominent feature in the course." As Dr. Harry Friedenwald remarks in his interesting paper on "The Early History of Ophthalmology and Otology in Baltimore (1800-1850)," "this was the period of Dr. Frick's greatest activity, and it is possible that the prominence given to ophthalmology in that institution was due to him, he being the Clinical Lec-

* George Joseph Beer was born at Vienna, December 23, 1763, and died there April 11, 1821. He graduated Doctor of Medicine in 1786 and soon became distinguished as an ophthalmologist, attracting young men of talent from many quarters, among whom were Graefe, Jäger, Langenbeck, Chelius, and others. A special Chair of Ophthalmology was founded for him at Vienna in 1812. An end was put to his work by a severe stroke of apoplexy in 1819. His great work was his "Lehre von der Augenkrankheiten," etc., 2 vols., first edition, 1797; second, 1813. Hirsch speaks of him as "the most distinguished representative of modern ophthalmology—a Coryphæus of Ophthalmology." Frick speaks of his "Lehre" in these terms: "For comprehensiveness of design, accuracy of observation and delicate discrimination, this work stands unrivaled in any language."

MEDICAL AND CHIRURGICAL FACULTY

turer on that subject.”* This appears almost certain if the arrangement was actually carried out, as he was the only person here at that time capable of filling such a position. But we lack the evidence that it was accomplished.

Besides his special interest in Diseases of the Eye, Dr. Frick held an appointment as Vaccine Physician from 1821 to 1823, the city having in the former year, upon the recommendation of the Medical and Chirurgical Faculty, created such an office in each ward. He was much interested in scientific studies, and with Drs. Jules T. Ducatel, George Williamson and Patrick Macaulay founded in 1819 the Maryland Academy of Science, of which he was librarian in 1824 and curator in 1836.† This society embraced in its membership most of the scholars of Baltimore and its reputation extended beyond the limits of the State. *Silliman's Journal of Science and Arts* speaks of it as “standing prominent among associations of a like nature, and its memoirs constitute an important item in our scientific history.” He held the Chair of Natural History in the School of Arts and Sciences of the University of Maryland on its organization in 1830. He was also much devoted to music and himself a musician. He was Recording Secretary of the Medical and Chirurgical Faculty from 1821 to 1826.

“He was unfortunate in growing very deaf before middle life and it is probable that this interfered greatly with his practice of medicine; for somewhere about 1840 he entirely relinquished it and left Baltimore to spend most of his time in

* *Bulletin of the Johns Hopkins Hospital*, August-September, 1897.

† I think we are justified in considering as one continuous organization, the little coterie, which met “in a room over a stable in rear of the northwest corner of Lexington and St. Paul Streets,” in 1819, and the Maryland Academy of Science and Literature, which was organized in 1822 with Rev. L. H. Girardin, as President, and reorganized and incorporated in 1826.

MEDICAL AND CHIRURGICAL FACULTY

Europe, paying occasional visits to this country. He was a man of very retiring and modest character and of kind disposition. He was a careful scientific student and his work and writings deserve high praise" (Friedenwald). He died at Dresden, unmarried, March 26, 1870, aged 77.

The date of Dr. Frick's admission to the Faculty, as shown by his Certificate of Membership in the possession of the latter, is April, 1816, and it is signed by Robert Moore as "Præses" and John Arnest as "Scriba." It is quite evident that this diploma was issued some years after this date, probably subsequent to 1821, and dated back. Dr. Moore did not become President until 1820 and this is the new form of certificate, at present in use, which did not supplant the old one until certainly during or after 1821. Besides the place for the names of the examiners, "perquisitores," is blank in it. Dr. Frick's departure for Europe within a short time after his graduation in 1815 doubtless accounts for the delay in issuing it.

Dr. Frick's graduating thesis was "On the Meloe Vesicatorium." Dr. Quinan refers to a paper "On the Senses" read before the Medical Society of Maryland in 1821, and in Hirsch's Biographical Lexicon, in a notice of Dr. Frick, reference is made to an extract from an article of his on "Menschenblattern in Baltimore," contained in the *Med. Chir. Ztg.* (published at Innsbruck), in 1822. Neither of these writings is now accessible. Dr. Frick's journal articles on the eye appear to have been embodied in his manual and do not call for separate notice.

The title of this work is "A Treatise on the Diseases of the Eye, including the Doctrines and Practice of the Most Eminent Modern Surgeons, and Particularly those of Professor Beer. By George Frick, M.D., κλ of H, Ophthalmic Sur-

geon to the Baltimore General Dispensary. With an Engraving. Baltimore. Published by Fielding Lucas, Jun. John D. Toy, Printer. 1823." It is dedicated to Prof. Philip Syng Physick, "by his faithful Friend and Servant, the Author," and contains 333 pages, including introduction and contents.

In his introduction he says that his volume is little more than the abstract of a course of lectures which he had prepared, the results of his observations abroad and at the General Dispensary. It is intended simply as a manual for those entering upon the study of the subject and he makes no claim to its being an elaborate or systematic treatise. It had been his intention at first to publish a simple translation of Professor Beer's work, but while abandoning this design he had used it as a basis for his own, selecting freely from it, but adding what was most important in the experience and practice of others, with observations of his own. The plan of the work was founded on the variety of textures entering into the structure of the eye and comprised four divisions: (1) inflammations, (2) sequelæ of these, (3) diseases of the appendages, (4) diseases attacking several of the tissues simultaneously. While acknowledging this arrangement to be open to objection, he considered it the most simple and natural that could be adopted.

Dr. Frick justifies the publishing of his work by the urgent need of it and the increasing importance of the subject. There was then no work on the eye accessible in English but that of Saunders, which considered only a few diseases of the organ and was designed to make known some improvements and original discoveries of the author. The slow progress of ophthalmology, especially in America, he attributed to the neglect of it by the profession, who left it exclusively to the oculists.

MEDICAL AND CHIRURGICAL FACULTY

Elaborate reviews of Dr. Frick's work appeared in *The Philadelphia Journal of the Medical and Physical Sciences*, vol. ix, No. 18, and in the *American Medical Recorder*. The former is signed by Isaac Hays and is eighteen pages in length. "The author," he says, "evidently possesses a cultivated and well-disciplined mind; he appears to be intimately familiar with the German writers, and we feel much indebted to him for making us acquainted with their writings." But while Dr. Hays considers this work as a most useful one for beginners, he thinks the profession needs a more elaborate work and hopes that the author will execute the design he first entertained of translating Professor Beer's work entire. He speaks of eye infirmaries in New York City and Philadelphia, the former in a flourishing condition, the latter in a languishing one. The second review consists of thirty-four pages and is signed by "A." It quotes page after page of Frick's book and is very complimentary. It speaks of the fine descriptions of symptoms and says: "Throughout the whole book is displayed a disciplined and extremely well-read mind; the author is perfectly conversant with the subject on which he treats, and displays an intimate knowledge of the practice and writings of the most celebrated ancient and modern ophthalmic surgeons of England, France, Germany and Italy, and very much to his credit and value of his production, he has not servilely adopted any of their opinions, but such as have been confirmed by observation and experience. In all doubtful cases he gives his readers the opinions of the most approved authors, compares them with each other and then draws his own conclusions. To students and young practitioners this method enhances the value of the book greatly, as they are too often left in doubt what course to pursue in some of the most important and per-

plexing cases. This work comprehends a very complete and distinct account of all the principal diseases to which the human eye is subject." The section on conjunctivitis speaks of the "extremely precise and correct distinctions and the remedial precepts founded upon them," as constituting a strong evidence of the author's profound knowledge and skill. "Most surgeons treat all the above species of ophthalmia pretty much in the same way, and, indeed, very few ever think it necessary to descend to such minutæ; but we apprehend that most of them, after perusing our author's remarks attentively, will allow the necessity of separating the various species and of applying a different treatment to each, according to its own peculiar nature. The almost general neglect of care in the treatment of conjunctival inflammation has doomed many of our fellow-beings to total blindness, and rendered many curable cases entirely unmanageable." The reviewer points out that many excellent surgeons doubt the existence of a gonorrhœal ophthalmia, and that Frick himself had never seen a case of it, although he had visited for several years the principal eye infirmaries and hospitals of Europe. Nevertheless, Frick believes that it does exist with very great rarity, as proven by reports of cases by Swediaur, Beer, Scarpa and Vetch, and had therefore given a very excellent description of it, accompanied with much philosophical reasoning. The whole review is extremely eulogistic, much more than Hays', and concludes as follows: "We cannot take leave of the book under our notice without offering the humble tribute of our thanks to the author for the benefits which he has conferred on the profession generally by presenting them with a volume of great value and utility and one which was much wanted. As a manual of the diseases of the eye we believe it to be the best which has been published.

MEDICAL AND CHIRURGICAL FACULTY

It contains all the improvements which have enriched ophthalmic surgery in such a surprising degree within a few years past, and the author has spared no pains to make his work a valuable treasure for study as well as reference, thereby rendering it equally useful, both for the practitioner and the student."

The work of Dr. Frick was also well received abroad. Hirsch, in his "History of Ophthalmology," speaks of Frick as "the Apostle of the Ophthalmological School of Vienna in North America." So highly esteemed was it in England that an English surgeon, Richard Welbank, a member of the Royal College of Surgeons and of the Medical and Chirurgical Society of London, republished it at London in 1826, adding numerous foot-notes, but leaving the text unchanged. He dedicated it to the eminent ophthalmologist, William Lawrence.

Dr. Frick's manual was among the books required to be read by students in 1825 before they could become eligible for examination for license by the Medical and Chirurgical Faculty. For a number of years it remained alone in American Ophthalmology. It is frequently quoted in the American edition of "Cooper's Surgery."

The picture of Dr. Frick accompanying this sketch is from one belonging to the Medical and Chirurgical Faculty, recently presented by his relatives, together with a case of his instruments.

WILLIAM GIBSON, M.D.

Among the great surgeons of the century just passed Dr. William Gibson holds a high rank. He was born at Baltimore, a twin, March 14, 1788. He received a classical education at St. John's College, Annapolis, and at Princeton, but

MEDICAL AND CHIRURGICAL FACULTY

did not complete the course at either. He began the study of medicine under Dr. John Owen, of Baltimore, and attended the session of 1806-07 at the University of Pennsylvania. He then went abroad, attended lectures at the University of Edinburgh and graduated as Doctor of Medicine from that institution in 1809, presenting an inaugural thesis, entitled "*De Forma Ossium Gentilitia.*" This work, based upon researches carried on in the Monro Museum to determine the racial differences in the human skeleton, brought him much credit and pointed him out as a young man of great promise. In later life he received from his alma mater the honorary degree of LL.D. From Edinburgh he repaired to London and was fortunate enough to see there many of the English soldiers who had been wounded in the Battle of Corunna, in Spain. At this time he formed a friendship with the celebrated Charles Bell, who had charge of the wounded soldiers, and became a member of his household and his private pupil. At this time he also attended the lectures of Abernethy and Sir Astley Cooper. In 1810, after an absence abroad of three years, he returned to Baltimore and entered upon practice. In 1812, during the riots at Baltimore, he ligated the common iliac artery for the arrest of hemorrhage caused by a gunshot wound of the abdomen. Two convolutions of intestines were wounded, and each opening was closed with a ligature and returned. Although death occurred on the fifteenth day from "ulceration of the artery and peritoneal inflammation," this case established his reputation as a surgeon, being the first on record,* and in the same year Dr. Gibson was elected Professor of Surgery in the University of Maryland. In 1814 he brought out an American edition of "Dr. Charles Bell's System of Dissections," 2

* See *American Medical Recorder*, iii, p. 185.

MEDICAL AND CHIRURGICAL FACULTY

vols., Baltimore, 12mo, "dedicated to the gentlemen attending the University of Maryland." During the War with England, 1812-14, he held a surgeoncy in the Maryland Militia. In 1814 he went again to Europe, and happening to be traveling in the vicinity was present at the Battle of Waterloo and was there slightly wounded. From 1818-19 he was one of the Physicians to the Baltimore General Dispensary. In 1819 a vacancy occurred in the Faculty of the University of Pennsylvania by the death of Prof. John Syng Dorsey. Dr. Gibson was offered the Chair of Anatomy thus vacated, but would only accept the Chair of Surgery. So great was his reputation and influence that the Trustees transferred Professor Physick, the incumbent and founder of the Chair of Surgery, against his wishes, to the Chair of Anatomy and made Dr. Gibson the Professor of Surgery. This seems the more singular because Dr. Physick was then at the zenith of his fame and was known as the "Father of American Surgery." Dr. Gibson held this Chair continuously until 1855, when, having acquired a fortune, he retired and was appointed Emeritus Professor.

In this position Dr. Gibson sustained and increased the reputation of his earlier years. He is described as a clear, agreeable and emphatic lecturer, with a distinct and melodious voice, well-chosen language and an attractive style of enunciation. His demonstrations of surgical anatomy were simple and easily comprehended, those relating to the neck, hernia and lithotomy being especially good. He had a large collection of models, casts, pictures, bones, tumors, apparatus, etc., many of his own preparation, with which to illustrate his lectures.

As an operator he was rapid and dexterous. Many of his cases and operations are on record. He possessed great me-

MEDICAL AND CHIRURGICAL FACULTY

chanical ingenuity, being a fine artist and skillful worker in wax. At the age of eighty he still worked in his shop. He painted, knew how to stuff birds and played upon several musical instruments, especially the violin. He was very fond of fishing. He retained throughout life a strong taste for the classics, and in his old age used to repeat three hundred lines of Vergil from memory. He kept a daily journal for over sixty years, which at his death amounted to one hundred and fifty volumes. In religion he adhered to the Episcopal Church. He was twice married and had several children by each wife. One of his sons, named after his friend, Sir Charles Bell, became a distinguished Surgeon and Professor in the Washington University of Baltimore and the Richmond Medical College.

On retiring from his Chair at the University of Pennsylvania he removed to Newport, R. I., where he spent his latter years. He died at Savannah, Ga., while on a visit to the South, on the second of March, 1868, aged eighty years.

In person Dr. Gibson is represented to have been about five feet nine inches in height, heavily built, weighing about 160 pounds, with a broad round face and ruddy complexion, very vain of his personal appearance and more so of his reputation as a surgeon and teacher. Dr. Ashhurst describes him as "walking into the amphitheatre, gloves and riding-whip in hand, having just ridden in from his country home to meet his class, and, after lecturing with all his accustomed force and vigor, riding back again to enjoy his rural repose."* Dr. Busey tells how, after a summer spent in Europe, "he returned late in the autumn of 1847 with a large outfit of broadly striped waistcoats and trousers to match, which he wore on successive lecture days until he had exhibited to the class the entire ward-

* Proceedings of College of Physicians, 1887.

MEDICAL AND CHIRURGICAL FACULTY

robe of the latest English fashionable wearing apparel. The class received him every day during these successive dress exhibitions with prolonged rounds of applause, which he attributed to their personal admiration and received with profound gratitude. His fancy clothes were a startling departure from the professional style of dress in vogue at the University at that period."*

Besides the works already mentioned Dr. Gibson published many articles in the *American Journal of the Medical Sciences*. In 1824 appeared his "Institutes and Practice of Surgery," a work in two volumes, octavo, being "Outlines of a Course of Lectures." This work which was marked for its excellent style and accurate descriptions, went through eight or nine editions, each amended and improved. In 1840 he issued his "Rambles in Europe, with Sketches of Prominent Surgeons and Physicians, Medical Schools, Hospitals, Literary Personages and Scenery," 12mo, pp. 309.

Dr. Gibson's first great operation was the ligation of the common iliac, next to the aorta the largest artery in the body, in 1812. This brought him at once fame. He was the first in this country to perform supra-pubic lithotomy and among the first to perform lithotripsy. He devised the operation of linear extraction of cataract in 1811 (Gross). He tied the subclavian artery in its third division for hemorrhage of the axillary wounded in the reduction of a dislocated shoulder joint, excised ribs, removed a wedge-shaped portion of bone for ankylosis of the knee joint, establishing a false joint (Druitt), and extracted the ball which Gen. Winfield Scott received at the Battle of Lundy's Lane. He performed Cæsarean section twice upon the same woman, saving the life of the mother

* "Personal Reminiscences," Washington, 1895.

MEDICAL AND CHIRURGICAL FACULTY

and both children. He invented an apparatus for fractures of the lower jaw, devised an instrument for facilitating the operation of staphylorrhaphy, and modified Physick's tonsillotome. Dr. Gibson also divided the recti muscles for strabismus as early as 1818. He operated then upon three cases with partial success, but meeting with an unfavorable result in a fourth case operated on after his removal to Philadelphia, upon the advice of Professor Physick he abandoned the experiment. Strohmeyer's monograph, recommending division of the muscle for strabismus did not appear until 1838. [See American Appendix, "Cooper's Dictionary of Practical Surgery," edited by David Meredith Reese, 1844; Gibson's "Institutes and Practice of Surgery," sixth edition, 1841, and article by Dr. Harry Friedenwald, in *Johns Hopkins Hospital Bulletin*, August-September, 1897, entitled "The Early History of Ophthalmology and Otology in Baltimore (1800-1850)."]

CHARLES FRICK, M.D.

Charles Frick, the son of Hon. William Frick, Judge of the Superior Court of Baltimore, and nephew of Dr. George Frick, the ophthalmologist, was born at Baltimore, August 8, 1823. His classical and mathematical education was obtained at Baltimore College, where his unusual talents were fully recognized. After serving for three years in the engineering department of the Baltimore and Ohio Railroad, he began the study of medicine in 1843 under Dr. Thomas H. Buckler. In the following fall he attended a partial course of lectures at the University of Maryland and, at the close of the session of 1843-44, entered as a resident student at the Almshouse, which contained 200 beds for the sick and a lying-in department. There he began at once the habit of keeping records

MEDICAL AND CHIRURGICAL FACULTY

of the cases and autopsies. He particularly applied himself to auscultation and percussion, the practice of which had been introduced into Baltimore a few years before by his brother-in-law, Prof. Wm. Power, who had been a favorite pupil of the great Louis at Paris. He devoted himself enthusiastically to this new science, and was often to be seen wandering through the wards, stethoscope in hand, examining hearts and lungs, whilst the other students were taking their ease. Thus the house was never destitute of interest to him, and when he left at the end of his year, he carried away a number of anatomical preparations and reports of a great variety of cases and autopsies. In March, 1845, he took his degree of Doctor of Medicine at the University of Maryland, offering a thesis on "Puerperal Fever," based upon cases he had himself observed, and maintaining its contagious character.

His first article appeared in the *American Journal of the Medical Sciences* for April, 1846, and consisted of reports of "Eleven Cases of Remittent Fever" made by Dr. Washington F. Anderson and himself, with remarks by Dr. Alfred Stillé, of Philadelphia. This work was freely quoted by Bartlett and other writers on the subject, and was regarded as an important contribution to the pathology of the disease, confirming the observations of Stewardson, made in 1841, that the chief anatomical lesions were an enlarged, softened and slate-colored liver, and a similarly though to a less extent affected spleen and heart. In the fall of 1847, with the coöperation of Drs. Christopher Johnston, David Stewart and Elisha W. Theobald, he organized the Maryland Medical Institute, a preparatory school, in accordance with the recommendations of the American Medical Association for the elevation of the standard of medical education. In this he held the Depart-

MEDICAL AND CHIRURGICAL FACULTY

ment of Practical Medicine and had the first opportunity for the development of his talent for teaching, which later shone with such brilliancy in the professorial chair.

In January, 1848, he published in the *American Journal of the Medical Sciences* his analyses of the blood, a research which gave him great *éclat* and established his position as an authority on animal chemistry. As an evidence of the care and labor he bestowed on these analyses, which included pulmonary tuberculosis, idiopathic fevers, rheumatism and anæmia, may be mentioned the fact that he rejected no less than 70 of the 150 investigations because of some slight elements of uncertainty about them.

In the same year and journal, Dr. Frick reported some cases of oxaluria, then supposed, in accordance with the views of Golding Bird, to be an abnormal condition, which later when he found the views erroneous, he acknowledged were of no value.

In 1849 he was elected Attending Physician to the Maryland Penitentiary, and during the seven years in which he held this position he collected many interesting data as to the condition of the inmates and suggested many ways of promoting their health and comfort.

Dr. Frick devoted much attention to urinary pathology, and, as the fruit of his labors, published, in 1850, his volume, entitled "Renal Diseases." In the preface to this he showed that his enthusiasm was not allowed to outrun his judgment when he urged his readers not to place too much confidence in the examination of the urine alone, but to interpret the significance of the results by the other symptoms. In this opinion he showed himself decidedly in advance of others who had written on the same subject. This work was unques-

tionably a valuable contribution to a branch of pathology previously but little understood. In this work Dr. Frick showed that Golding Bird was in error in regarding dumb-bell crystals as always composed of oxalate of lime, and proved that they might be produced as well by uric acid.

In July, 1852, Dr. Frick published in the *American Journal of the Medical Sciences* a report of some cases of diabetes mellitus, showing a most minute and exhaustive treatment of the subject.

In June, 1854, he read before this Faculty a paper on the diuretic properties of different drugs, as evidenced in 2000 observations on the inmates of the prison. In this work he insisted on the distinction between a simple hydragogue effect and a truly depurative action, the amount of solid material alone representing the waste of the tissues seeking an outlet by these channels. Some of Dr. Frick's results were quite striking. For instance, he found that the sulphate of quinine, three grains, with sulphate of iron, one grain, was the most powerful diuretic, producing 57 ounces of fluid, containing 1248 grains of solid material, 700 being the normal average. Next in value came juniper tea, 56 ounces with 1134 grains. Below these came the prussiate of iron, the sulphate of iron and the acetate of potash. Sweet spirit of nitre produced no increase of fluid and a very slight increase of solids. Morphia and strychnia decreased both.

In connection with urinary pathology, it may be said that Dr. Frick disagreed with Richard Bright, who regarded the presence of albumen as always indicating the presence of Bright's Disease. He thought that it might be due to simple congestion, or to pressure, as in pregnancy. He believed that a diseased state of the blood is the essential cause of

MEDICAL AND CHIRURGICAL FACULTY

renal degeneration, and that this consists in an abnormal state of the natural constituents, probably of the albumen or fibrine, which induces an unhealthy condition of the renal tissues. He made a broad distinction between the enlarged kidney from degenerative disease and the contracted, granular kidney resembling cirrhosis. He taught that the presence of fibrinous casts of the tubes containing spherical epithelium and, sometimes, blood corpuscles, indicates congestion or inflammation of the tubuli and nothing else; but if these epithelial cells are enlarged and their walls thickened, making them unusually opaque, if they are in sufficient quantity to block up the channel of the tubes and, moreover, contain a certain quantity of oil globules, we can have no doubt as to the nature of the disease. Equally important is it when the casts are almost solid, containing more or less oil but no epithelium, showing that the epithelial cells have been already thrown off and the nutrition of the part is incapable of forming them anew.

During the years 1855 and 1856 he took a prominent part in the proceedings of the Baltimore Pathological Society, reading some valuable papers. In the discussions, which were published in the *Virginia Medical Journal*, he was appealed to as an authority, especially in those relating to urinary pathology: On the reorganization of the Maryland College of Pharmacy in 1856 he was appointed to the Chair of *Materia Medica*, and continued to fill that position for two years with great advantage to the reputation of the institution. In the summer of 1856 he spent a few months in Europe, visiting the hospitals of Paris and London. He met with a most cordial reception from the great teachers, Paget, Todd, Bence Jones and Trousseau, who were familiar with his scientific

MEDICAL AND CHIRURGICAL FACULTY

papers and had a high appreciation of them. On his return he brought with him a number of rare specimens of medicinal plants collected in his travels.

Dr. Frick's growing reputation began now to draw attention to him as a great teacher, and he began to receive overtures from schools in other cities; but, fortunately for Baltimore, the ties of his native city kept him here. He had not long to wait, for in the year 1858 a vacancy occurred in the Faculty of the University of Maryland through the death of Prof. Richard H. Thomas and the transfer of Professor Miltenberger. Immediately "all eyes were turned towards Dr. Frick as the man above all others in the medical profession of our city whose entire fitness for the Chair was preëminent and undeniable; and when the Faculty, in verification of the universally expressed opinion, elevated him to the Professorship of *Materia Medica* and Therapeutics, most hearty congratulations were offered, as well to the new professor as to his colleagues, and the most confident predictions were uttered as to his success as a teacher and the considerable part he was likely to take in extending the usefulness and reputation of the institution."*

He entered at once with enthusiasm upon the clinical work at the Baltimore Infirmary. He had a wide field to test the value of doubtful or new drugs, and the intricate cases constituted the greatest attraction for him. Thoroughly equipped in all the diagnostic methods available at that day, he was followed in his daily visits through the wards by a large class of admiring students. Patient, considerate, eager to impart his knowledge, frank in expressing his opinions, his doubts, his mistakes, he secured at once their interest and their con-

* Dr. Christopher Johnston, memorial meeting, 1860.

fidence. With regard to the change of type theory, invented to account for the supposed difference in the toleration of blood-letting and other violent measures, he held that the explanation was to be found rather in "the better observation of diseases, their progress and the results of remedies upon them" than in an imaginary change of type. With regard to blood-letting in pneumonia, he thought it was sometimes useful, but that it was admissible only in the forming stage with the view of relieving the pressing dyspnoea, and was then to be resorted to with great caution on account of its depriving the blood of its red globules, so essential to its nutritive functions.

Dr. Frick was continually seeking for knowledge and striving to throw light upon obscure and important points in pathology. He was not satisfied to take for granted what others had taught or written. In none of his writings is this manifested more than in his essay on the "Formation of Urinary Calculi," which was published in the *American Medical Monthly*, New York, April, 1858. In this he combats the error of Golding Bird and others of explaining and naming diseases in accordance with the nature and quantity of the various substances contained in the urine; there is no such thing as "the uric, the oxalic and phosphatic diathesis." His investigations taught him that urea was derived not only from the waste of the nitrogenized tissues, but also from the nitrogenous food. It is the ultimate stage in descending metamorphosis of which uric acid is the next higher, the fall being effected by oxidation. The deposit of uric acid or its salts does not always occur because there is an excess; indeed, it is never from excess alone. Its deposition while in the urinary passages is referable either to the composition of the urine

itself or to the condition of the membrane over which it passes. We must look for the causes of phosphatic calculi almost entirely in the bladder, renal calculi being nearly exclusively of oxalate of lime and uric acid. Relying upon such views, he advises that, in order to prevent their formation or reformation, remedies be addressed to the urinary passages themselves and not to their secretions.

His last work was his "Lecture on Diuretics," published by his class, a scientific but practical summing up of his researches regarding this class of drugs, which he had studied very thoroughly.

Dr. Frick had been connected with the University for two years, advancing continually in reputation and practice, the pride of his friends and ornament of his profession. A long and successful career was before him, when suddenly a termination was put to all his hopes and to the natural expectations of his friends by the ruthless hand of disease. On the twentieth day of March, 1860, he attempted to save the life of a negro woman, a patient in the Baltimore Infirmary, suffering with malignant diphtheria, by the operation of tracheotomy. In some way, as was supposed, he became infected at this time (having always shown a peculiar susceptibility to diseases involving the throat), and on the following day he complained of soreness of throat. Notwithstanding, he attended the funeral of a friend in the afternoon and stood, during the services, with head uncovered and exposed to a chilling March wind. That night he had a severe chill, with increased pain and swelling, and the next morning Dr. John Buckler, his uncle, found the membrane forming. From this time on his sufferings were acute, especially in deglutition. On the third and fourth days he was worn out with sleepless-

FRICK ROOM.

ness and was seeking in vain some place and position that might give ease and relief to the terrible dyspnoea. On the evening of the fifth day his cold, cyanosed skin and feeble pulse indicated that the end was not far off. His physicians knew that he was sinking, not from mechanical obstruction in the larynx, but from the depressing effect of the poison, and decided that tracheotomy could not benefit him. He knew this, yet urged its performance, saying that it would afford him at least some temporary relief. They reluctantly consented, when rising from his bed, he seated himself in a chair, directed how the light should be placed so as to cast no shadow on the hand of the operator, handed the bistoury to one of his medical attendants, Dr. George W. Miltenberger, and placing his finger on the spot for the incision, threw back his head with an heroic courage. All were gratified that his entreaties had been acceded to, for he had a refreshing sleep and euthanasia. He gradually sank, however, and breathed his last on Sunday, March 25, 1860, in his thirty-seventh year.

Dr. Frick's character and achievements have been already referred to in this sketch. He was a man of unflagging industry and a born investigator. He was thoroughly independent in the formation of his opinions, being guided wherever possible by his own personal researches. He did not despise authority, but he demanded from it satisfactory credentials. He was, as has been remarked, the very man for the times, when, in the reaction from polypharmacy, many were disposed to go to the other extreme and deny the value of therapeutical agents altogether. He was conservative in the true sense of the word, holding on to the old wherever experience confirmed its value, and only in favor of the new when backed by sufficient proof. With all his enthusiasm he was deliberate in

MEDICAL AND CHIRURGICAL FACULTY

the formation of his opinions and never intolerant of those who differed from him. The quality that especially characterized his teaching and writings was their practical character. All his researches, all his labors conduced to practical results. And so, although he died so young, the value of his work was very great and easily appreciated. Of course the progress of time and the advance of knowledge have largely supplanted it and so it is unfair to judge it by the conditions prevailing nearly half a century after his death. But those who will peruse the works that have been referred to in this sketch will find him a master of good Saxon English and a substantial contributor to the progress of medical science. Such is the testimony of Holmes, Swett, Yandell, Flint, Johnston and his very dear friend, Dr. Frank Donaldson, from whose splendid memoir, published shortly after his death in Gross' "Lives of Eminent American Physicians and Surgeons of the Nineteenth Century," this sketch has been mainly drawn. Appropriate is it that his memory should be perpetuated by attaching his name to the medical section of our library, and that the commemorative tablet erected upon our walls should bear a motto drawn from Vergil's description of those who inhabit the "seats of the blest:"

"Quique sui memores alios fecere merendo."

For here are gathered the loved volumes which were his constant companions by day and by night, and we may imagine his spirit as still hovering in their midst.

Though time oft mantle of oblivion throws
O'er lives that in brightest lustre seem to close,
It has not yet effaced the mem'ries thick
That cling about the honor'd name of Frick.
Him nature form'd in gentlest, manliest mould,
Unselfish, patient, modest yet large-soul'd,

MEDICAL AND CHIRURGICAL FACULTY

And amply gifted with those powers rare,
That mark the man of genius everywhere.
Him nature taught her secrets to explore,
To penetrate disease's inmost core,
And in the crimson current's heated tide
To trace the paths where fevers lurk and hide;
To carve and clear a way by methods new,
To analyse, to measure, gauge and view
With sharpest glass; cast, pigment, granule, test,
And over cell and fibre hold inquest;
Reaction to determine and to sift
The ashes of life's wear for golden drift;
Naught to take on faith but all things to try,
In the crucible of his own alchemy;
Authority duly to respect but thrust
From musty shelves the antiquated dust;
To grasp the essence of a thing forsooth,
And let in grateful light upon the truth.
Such was the man—his work; faithful in all
And brave, 'till came the fatal duty's call
And—'ere into full noon the morn of life
Yet had ripened—cut short his noble strife.
Like some young lusty oak whose head doth cleave
The sky, far o'er the grove, where zephyrs heave
A purer breath, and the great king of day
Emits his brightest, first and latest ray;
When storms arise and darkness rules the air—
Save for the forkèd lightning's angry glare—
His ample bosom rends the bolt—although
Safe are his humble comrades far below.
These glorious lives—they are our heritage—
Friend, hero, benefactor, martyr, sage;
And though to them the world is so unjust,
Nor carves for them their due—memorial bust,
Nor gilds their mem'ries with immortal fame,
Such as he, who for his country dies, may claim;
No nobler deeds the page of hist'ry bears,
Nor lives the man who nobler does and dares.
No matter though there be danger and death,
No matter though it call for one's last breath,
May those be always found dispos'd and quick,
To follow lead of lives of men like Frick!

MEDICAL AND CHIRURGICAL FACULTY

NATHAN RYNO SMITH, M.D.

The subject of this sketch was the second of the four sons of Dr. Nathan Smith, the distinguished New England surgeon and founder of Dartmouth and Yale College Medical Schools. The name "Ryno" was derived from the Poems of Ossian, a favorite author of his mother. Another son bore the appellation of Morven, probably obtained from the same source.

The elder Smith was born amidst the bleak hills of New England, in 1762, and grew up as a pioneer and hunter, enduring the hardships of border life in which the Indians still played a part. During the last eighteen months of the War of the Revolution, he served as an enlisted soldier in the Vermont Militia, being in the same command with his father. He thus learned the lessons of boldness and self-reliance which were in after-life his prominent qualities as a surgeon. At the age of twenty-one he accidentally witnessed a surgical operation which so impressed him that he determined to become a surgeon. Having duly prepared himself by a course of preliminary study and having passed three years under a preceptor, he began practice in the year 1787 in the town of Cornish, situated on the banks of the Connecticut River in the State of New Hampshire. Two years later he attended a course of lectures at Harvard College and took the degree of Bachelor of Medicine in 1790, being the only graduate of that year. Late in 1796 he went abroad and for some months attended lectures at Glasgow, Edinburgh and London, preparing for the *rôle* which he had marked out for himself. On his return he founded the Medical School at Dartmouth College, giving, himself, nearly all the instruction in that department.

MEDICAL AND CHIRURGICAL FACULTY

By 1813 his fame as a surgeon and physician had grown so that he was in that year called upon by the authorities of Yale College to organize a medical department there. From this time on until his death in 1829, he continued to lecture in this school, both on medicine and surgery. He also organized and gave lectures at Bowdoin College, Me., from 1821 to 1825, and at the University of Vermont from 1822 to 1825. He was the second American ovariologist; the first to trephine bone for suppurative inflammation; the first in this country to amputate at the knee-joint. He reduced shoulders which had been dislocated in one case seven months, in another nearly a year (Gross). His practice is said to have extended over four States.

From the most recent and authoritative estimate of the work and services of Dr. Nathan Smith, I quote the following: "Nathan Smith shed undying glory upon the Yale Medical School. Famous in his day and generation, he is still more famous to-day, for he was far ahead of his times, and his reputation, unlike that of so many medical worthies of the past, has steadily increased as the medical profession has slowly caught up with him. We now see that he did more for the general advancement of medical and surgical practice than any of his predecessors or contemporaries in this country. He was a man of high intellectual and moral qualities, of great originality and untiring energy, an accurate and keen observer, unfettered by traditions and theories, fearless and, above all, blessed with an uncommon fund of plain common sense. * * * The treatment which he advocated (in typhoid fever)—cold water, milk and avoidance of all violent remedies—is practically the same as that now employed. * * * To the surgeon (his) paper on the 'Pathology and Treatment of

MEDICAL AND CHIRURGICAL FACULTY

Necrosis' has become as much of a classic as the essay on typhus fever is to the physician. * * * He was the first to perform a number of important surgical operations, and * * * in this branch not less than in medicine, he was an innovator and reformer."*

Prof. Samuel D. Gross speaks in similar terms: "One of the most extraordinary men whom this country has ever produced, whether we regard his great ability as a general practitioner, his skill and daring as a surgeon or his versatility as a teacher of the different branches of medicine."†

His no less great and distinguished son, the subject of this memoir, was born on the twenty-first of May, 1797, in the town of Cornish where his father had been practicing for ten years. After having received a preliminary training at Dartmouth, he entered Yale as a Freshman in 1813 and graduated A.B. in 1817, at the age of twenty. He then spent about a year and a half in Fauquier County, Va., as tutor in the family of Mr. Thomas Turner, a gentleman of worth and social eminence. Here at the hospitable Southern home, "Kinloch," he conceived the strong attachment to the South, which, in after years, when the sections were divided by war, was manifested by intense devotion to her cause. On returning from Virginia he began the study of medicine, and in 1823 received from Yale College the degree of Doctor of Medicine, in his inaugural thesis defending the view that the effects of remedies and diseases are due to absorption into the blood and not to an impression on the nervous system, as many eminent writers then maintained. He continued his

*"The Relation of Yale to Medicine," by William Henry Welch, M.D., LL.D., 1901.

†"Century of American Medicine." *American Journal of the Medical Sciences*, April, 1876.

MEDICAL AND CHIRURGICAL FACULTY

experiments on this subject, and his publications in 1827 are referred to by Dr. Alfred Stillé in his work on "Therapeutics," vol. i, p. 51.

He began practice at Burlington, Vt., in 1824, and in the following year he was appointed to the Professorship of Surgery and Anatomy in the University of Vermont, the Medical Department of which had been organized mainly through his exertions, aided, however, by his father, who as already stated had lectured there for some weeks annually since 1822.

In order to fit himself more thoroughly for the work of teacher which he had undertaken, he spent the winter of 1825-26 at Philadelphia in attendance on the lectures of the University of Pennsylvania. But it was destined that he should not again return to New England. The circumstances which led to this change of plan were these: Soon after reaching Philadelphia he met Dr. George McClellan, an able anatomist and surgeon, who was then giving private instruction in that city to large classes. This gentleman and others were then engaged in organizing a new medical school, the Jefferson Medical College. Being impressed by the ability and acquirements of Dr. Smith, they invited him to join with them and offered him the Chair of Anatomy. This he accepted and he continued to lecture with them during two sessions. Among his pupils at this time were the distinguished surgeon, Prof. Samuel D. Gross, and the eminent gynæcologist, Dr. Washington L. Atlee.

In 1825 he published at New York an "Essay on Digestion" of 93 pages and after his settling at Philadelphia edited, in 1825-26, with the coöperation of his father, the *American Medical Review*. In June, 1827, he founded a medical periodical entitled the *Philadelphia Monthly Journal of Medicine and*

MEDICAL AND CHIRURGICAL FACULTY

Surgery, which was continued into the following year and then merged into the *American Journal of the Medical Sciences*.

In 1827 Dr. Smith's connection with Jefferson Medical College was severed by his acceptance of the Chair of Surgery in the University of Maryland, made vacant by the withdrawal of Granville Sharp Pattison. With this event commenced Dr. Smith's long and eventful career of fifty years at Baltimore, terminating only with his death in 1877. He entered with zeal and vigor upon his duties here and the period was propitious for his advent, as Davidge was withdrawing from practice and survived only two years longer, and Jameson, his only real competitor, soon abandoned the field. His introductory lecture is published in the February, 1828, number of the above-mentioned journal.

He found among the hospitable homes of Baltimore, with their Southern affiliations, a congenial place of residence and soon acquired an extensive practice. As Dr. Chew well said, his name became a household word throughout the State, and from the Alleghanies to the Chesapeake no one was more thoroughly in heart and feeling a son of the soil, a true Marylander than he. His addition gave great strength and *éclat* to the Faculty of the University, where it may be almost said he reigned supreme for nearly half a century.

His lectures must have been a grateful relief to the class, for he prepared them with care and he taught the lessons of nature as he saw it, guided by acute perception and strong common sense. In character he strongly resembled his father, having the same earnestness of purpose, the same original and inventive mind, fertile in expedients and unshackled by the dogmas of the schools. He was much shocked to find the physicians here, even some of his colleagues, bleeding patients suffering

MEDICAL AND CHIRURGICAL FACULTY

with such diseases as consumption, typhoid fever, and even anæmia and piles. At the end of the session he delivered the address to the graduating class.

In the year 1829 he lost his father, and so improvident had the latter been with reference to financial matters, so generous with his charities and his professional services, that he left his family impoverished. For many years Dr. Smith bore the entire expense of their support and of the education of his younger brothers, and having soon a numerous family of his own, this was a heavy burden to him notwithstanding his large practice.

In 1829 appeared his work on "Diseases of the Internal Ear," being a translation from the French of J. A. Saissy, with a supplement of twenty pages by himself, on "Diseases of the External Ear." The latter is written in the most concise and simple manner and covers most of the inflammatory affections of the auditory canal, congenital deformities, injuries as well as the treatment of foreign bodies, insects and indurated wax in the auditory canal. In 1830 he delivered by appointment the annual oration before the Medical and Chirurgical Faculty, doing the same thing again in 1846. In the former year he issued a journal, entitled *The Baltimore Monthly Journal*, the first number of which appeared in February. It continued until the end of the year, when it ceased on account of lack of support. In the September and October numbers appeared a noteworthy article, entitled "Description of an Apparatus for the Treatment of Fractures of the Thigh and Leg, by Smith's Anterior Spint." One-half of the original matter of the volume of 510 pages consisted of contributions by Dr. Smith, and, as Dr. Ashby has said, these "were marked for the usual force, originality and clearness which characterize his writings."

MEDICAL AND CHIRURGICAL FACULTY

Dr. Smith was also for many years a coloborator and frequent contributor to the *American Journal of the Medical Sciences*. He also wrote many articles for a journal published at Baltimore by Prof. E. Geddings, of the University of Maryland, from 1833 to 1835, for the *Maryland and Virginia Medical Journal*, 1860-61, of which Dr. W. Chew Van Bibber was a coeditor, and for the *Baltimore Medical Journal*, founded in 1870 by Drs. Howard and Latimer. In 1832 appeared his great work on the "Surgical Anatomy of the Arteries," quarto, of which a second edition appeared in 1835.

In 1867 he published a small volume of 70 pages, giving a description of the method of using his "Anterior Suspensory Apparatus in the Treatment of Fractures of the Lower Extremity, with Cuts and Diagrams." And finally he issued a little duodecimo in 1869, which he called "Legends of the South, by Somebody, who Wishes to be Considered Nobody." Early in his career at Baltimore he conceived the idea of writing a work on "Surgery" with wood cuts, and did from time to time compose a large part of it, but it remained at his death among his papers unfinished. He probably contemplated a work somewhat on the order of "Druitt's Surgery," which he liked very much.

During the troublous times in the history of the University of Maryland, when the Regents withdrew from the School and established a second school of their own and brought suit against the Trustees for a restoration of their rights and property, Dr. Smith sympathized with them and held his Chair from them during the session of 1837 and 1838, lecturing at the old Indian Queen Tavern. But in 1838 he was offered the Chair of Practice of Medicine in Transylvania University with a salary of \$3,000. This offer seemed at the time a most

MEDICAL AND CHIRURGICAL FACULTY

inviting one, as Transylvania was then at the height of its fame and prosperity, it was the oldest school in the West and situated in a rich and growing section of Central Kentucky, it was well endowed for the times, and, moreover, the terms of Dr. Smith's contract enabled him still to spend two-thirds of the year at Baltimore where his chief practice lay and his family resided. It also illustrates the reputation which Dr. Smith had acquired since the salary was much beyond that which the other members of the Faculty received. So he accepted the offer, and for three years he continued to travel West each fall to Lexington, returning at the close of the short sessions which then only lasted four months. But he seems soon to have realized his mistake. Circumstances changed and the results did not equal his expectations. The field of practice at Lexington was limited in extent and already occupied, so that his revenues from that source were small. The salary which he received was reduced by current expenses, loss on uncurrent money, etc. At Baltimore the Medical School was recovering from its disasters and his former colleagues there were eager for his return. The long journey forth and back twice a year and the separation for so long a period from his family doubtless had their weight. His practice at Baltimore was becoming very large and profitable, and it was necessary for him to husband all his resources to meet the expenses of his now numerous family and of his mother and her children at New Haven. Lastly, an unexpected claim of several thousand dollars connected with the obligations assumed by the Faculty of the University of Maryland to Prof. Maxwell McDowell had been brought against him, from which there was no feasible mode of release except by returning to that institution, and so at the close of the session of 1840-41 he

MEDICAL AND CHIRURGICAL FACULTY

offered his resignation and resumed his professorship at the University of Maryland, where he had already lectured during the previous session.*

From this time forth Professor Smith devoted himself to his professional and professorial duties here. His time was constantly occupied in attending to his large clientèle, in lecturing and in holding consultations with his brethren of the profession, which often took him to distant parts of the State or the adjoining States. But he "never aimed at that overwhelming practice which robs life of all rational enjoyment." nor was it his purpose to amass a large fortune. "He would have esteemed it a debasement of skill and knowledge to make the acquisition of money the prime object of his exertions" (Chew). Satisfied with the ample means which he was able to command, he delighted in the society of bright and witty persons and often indulged in a social game of cards. He was a man of tender sensibilities and no appeal for charity was ever made to him in vain. With all his great gifts there was about him a remarkable simplicity of character and a transparent ingenuousness which was as incapable of affectation as of falsehood. While kind and considerate to the poor and ever ready to make sacrifices for his friends and while deferential to the opinions even of his juniors, he was imperious to his equals and brooked no rivalry in his profession. In the forty-odd years of his active life he held the field against all comers and several surgeons of undoubted ability were compelled either to retire before him or to settle down in general practice. These qualities obtained for him the undisputed

* "Transylvania University, the leading Western School; number of students the last session, 254." *American Journal of the Medical Sciences*, January, 1841.

MEDICAL AND CHIRURGICAL FACULTY

leadership of the Maryland profession and the title which was generally applied to him by his students of "The Emperor."

In 1861, at the beginning of the troubles between the North and South, he mingled actively in politics for the first and only time. His sympathies were strongly with the South and he permitted himself to be elected as Chairman of the Democratic State Convention. On this occasion the proceedings of this body were interrupted by the military and he was threatened with arrest, but undaunted by the threats of force, he maintained the rights of himself and his followers with such calm courage and majestic dignity that the opposition ceased and the meeting was allowed to go on with its work.

In 1867, when he had reached the "three-score years and ten," which the Psalmist has assigned as the limit of human life, he made his first and only visit to Europe. Although he sought in it only relaxation from his labors and amusement, he naturally visited many of the great European hospitals. His reputation had preceded him everywhere and he was received with the greatest deference, Sir James Paget in London being particularly attentive and the French surgeons giving him the title of the "Nestor of American Surgery." On his return in October of the same year, he received an ovation at the hands of the profession of Baltimore and was entertained at a banquet, his former pupil, Prof. Samuel D. Gross, coming on from Philadelphia to join in doing him honor.

He continued his active work at the University for two years longer, when he resigned and was made Emeritus Professor and President of the Faculty. In 1870 he was elected President of the Medical and Chirurgical Faculty, and the following year was reelected to the same office, special provision being made in his case for this unusual honor. Not long after this,

MEDICAL AND CHIRURGICAL FACULTY

painful disease and infirmities of age began to oppress him and he was compelled to devote less attention to professional work; yet he did not withdraw entirely from practice until the last few months before his death, nor was he idle during these declining years; he still attended to office consultations, he wrote upon his surgery, he found pleasure in reviewing the classics, especially Homer and Vergil, and, above all, he found that satisfaction and peace in the Christian religion which philosophy and science had been unable to secure for him. Thus engaged, the painful disease of the bladder from which he suffered, slowly advanced and finally mastered his vigorous constitution on the third of July, 1877, a few weeks after he had passed his eightieth year.

Professor Smith was a man of commanding presence, fully six feet in height, a clean-shaven face with a well-shaped Grecian nose, long, thin, compressed lips, piercing eyes, surrounded by shaggy eyebrows, a well-shaped, well-poised head, with a long neck concealed by an old-fashioned black stock and standing collar; he always dressed in black and wore a frock coat; he was near-sighted and wore glasses, and frequently in his later years when he would remove his spectacles and bend over a patient to observe the parts more closely, the blood from a divided artery would spirt up in his face, much to the amusement of the students. He always lectured without notes and in slow, deliberate fashion. His voice was of medium pitch and distinct, though not strong. He indulged in story and humor whenever the opportunity permitted, although he was never coarse, profane or obscene. The portrait of him at the University is an admirable likeness, and represents him in his characteristic attitude while lecturing as the writer knew him in the sessions of 1866-67, 1867-68, 1868-69.

MEDICAL AND CHIRURGICAL FACULTY

Dr. Chew has drawn a graphic picture of him in the following words: "In your mind's eye you can see him in the amphitheatre in the attitude of dignity and command which always belonged to him. As he illustrates and enforces his teaching, he points to the diagrams on the wall and his wand must always be at hand, for like the magician's divining rod, it seems to have some mystic connection with the exercise of his powers. Or again he is going his early morning rounds through the hospital wards setting in clear light the leading points in the cases before him; mingling his words of instruction to the students with those of kindness and encouragement to the sick, and often of gentle humor, if the patient chanced to be a child." The qualities by which he won his professional position, according to Professor Chew, were: "Great acuteness of perception, an extraordinary power of adaptation to circumstances as they arose, promptness of action which sees what is needed to be done and straightway does it, and, above all, indomitable, untiring industry."

Dr. Smith was one of the greatest surgeons America has produced. The estimation in which he was held by his contemporaries may be judged from Professor Gross' review of "A Century of American Surgery."* He extirpated successfully the parotid gland, "one of the most difficult procedures in surgery;" also the tonsils, testes, tongue and thyroid gland; he frequently performed the radical operation for hernia; he removed tumors of every kind and size; he operated successfully for abscess of the cerebrum; tied the subclavian, carotid, external iliac, femoral, brachial and other arteries, also the internal jugular vein; excised the astragalus and inferior maxilla; amputated the limbs in all their parts, etc. He was among the

* *American Journal of the Medical Sciences*, April, 1876.

very first to perform subcutaneous section of the tendo achillis for club foot (1836; Strohmeier introduced it in Germany in 1831). About 1846 he devised a knife for division of strictures of the lachrymal duct, thus antedating Stilling by many years. He devised instruments for seizing wounded arteries in the application of the ligature which Gross calls "ingenious contrivances." But Dr. Smith's reputation must rest chiefly on his lithotome and anterior plint. The former was first made known in the "Medical and Surgical Memiors," 1831. By 1834 he had operated with this instrument with complete success in every instance 23 times. By 1860 he had operated with it over 100 times. In all, he performed the operation about 250 times, all except the first three or four being done with it, and with a relatively small mortality. A picture of this instrument is given in the "Memoirs" and also in the Transactions of the Medical and Chirurgical Faculty, 1878. In the latter Dr. Smith's son, Dr. Alan P. Smith, reports 52 successive unselected cases, 46 of which were operated on by the instrument without a death in the entire series. The result he attributes in very great measure to the use of the lithotome. Dr. Smith says: "By its aid the only two difficult features in the cutting part of the operation are made perfectly easy and mathematically certain. I refer to the first incision made through the skin and cellular tissue down to the groove in the staff and afterwards to the passage of the knife along the groove into the bladder. Dr. Smith (N. R.) in referring to these two steps of the operation says: 'I know not how it may appear to other operators, but to me the cutting with the scalpel for the groove of the staff, the introduction of the gorget or knife into the groove of that instrument, the anxiety which is felt in regard to its being properly fixed and the means which are necessary to determine with

MEDICAL AND CHIRURGICAL FACULTY

certainty whether it may be pushed forward with safety, constitute the most painful and perplexing part of the operation.' The instrument seems to me to be as nearly perfect as possible, and the only objection that I have ever heard urged against it fell from the lips of a distinguished Professor of Surgery, who rather complainingly said that 'with it *any one* could operate.'" It is a singular circumstance that there is no mention of this instrument in any recent work on Surgery.

There is no record of the exact number of lithotomies of either Dr. N. R. or A. P. Smith, or of the results. I have elicited the following information on the subject. Dr. Nathan R. Gorter, who was Dr. A. P. Smith's assistant for several years, writes: "When I left Dr. Alan P. Smith in 1887 he had done lateral lithotomy about one hundred times and I understand from his son, Dr. Nathan R. Smith, that he subsequently operated about sixteen times. It would certainly be a conservative statement to say he had operated 112 times by the lateral method. Dr. Smith's first fifty-five cases were all successful. He lost his fifty-sixth case. In the remaining cases he had but one death, and that occurred in the case of the Rev. Dr. Hoff, of Towson. This case, however, did not deserve to be classed as a death from lithotomy. The operation was done and the wound healed when typhoid fever set in and the patient died from that disease. As the patient was not out of bed after the operation before typhoid set in, Dr. Smith through overconscientiousness included this case in his mortality list. With this case counted as a death from lithotomy Dr. Smith lost two cases in 112 or one death in fifty-six cases. Without counting this case, and, in my opinion, it should not be counted, his record was one death in over 112 cases. In regard to the cases of Dr. Nathan R. Smith I regret to say

MEDICAL AND CHIRURGICAL FACULTY

that I can give you no positive information. My impression is that he had operated much more frequently than had his son, probably several hundred times, and that his death rate was about one in twenty-five."

Dr. Edward F. Milholland, who was Resident Physician at the Baltimore Infirmary from 1860 to 1864, writes: "I have read Dr. Gorter's letter, and my knowledge of Dr. A. P. Smith's work in that line is correctly reported. I agree with him in the statements that he has made. In reference to the work of Dr. N. R. Smith I do not believe that he ever kept a record of the number of cases that he operated upon. He must have had several hundred cases. During my residence at the old Baltimore Infirmary, as Resident Physician from 1860 to 1864, he had each year five or six cases, and all were successful. I do not recall a death after his lithotomy work. During those years, of course, he had cases in private practice, and I never heard of any failures. He always operated with as much self-confidence as a practitioner would vaccinate a baby. The only after treatment consisted in keeping the wound clean, and frequently changing the bed linen. Sometimes there was a troublesome hemorrhage after the cut, but the patients always rallied. A silver canula was passed through the incision into the bladder to permit the flow of urine, but was removed after two or three days. His external cut was always bold and free; the beak of his knife then entered the groove of the staff, and in a moment he had penetrated the bladder. The removal of the stone almost instantly followed. His manipulations were dexterous and rapid."

Mrs. Alan P. Smith writes: "Alan had after that time [i. e., the report of his fifty-two successful cases] quite a number of successful cases before losing a patient and am under the im-

MEDICAL AND CHIRURGICAL FACULTY

pression that there were over sixty before a single death occurred, and that he never lost more than two or three cases in all. Justice Miller, of the Supreme Court, was operated on successfully in the summer of 1878 and the same week A. operated on a colored man in the Penitentiary. Both recovered, making at least the fifty-third and fifty-fourth cases. In my journal, dated May 26, 1881, I find the record of the perfect recovery of the sixty-third and sixty-fourth cases, two young men from the Eastern Shore, and that the sixty-fifth case was waiting. I have known A. to operate for stone three times in one day and feel sure that as his health remained good for ten or twelve years after this date [1881] he must have had numerous cases that were never reported. The first patient who died would almost certainly have recovered if he had been willing to obey instructions, but I remember Alan's disgust and disappointment when he found the man had insisted on getting up which brought on chill and high fever. I think an old minister was the second loss. I believe his name was Wall."

Dr. Smith's nephew, Prof. Nathan Smith Lincoln, of Washington, who had excellent opportunities of knowing, wrote: "It is believed that no other surgeon in the United States has operated so often for stone. For many years preceding his death he kept no records of his cases, but the writer believes there can be no doubt that he cut for stone not less than 350 or 400 times with extraordinary success" (Transactions American Medical Association, 1878).

But the invention which he regarded as his chief contribution to Surgery was his anterior splint. He was engaged in perfecting this instrument for over thirty years and it was not completed until 1860. In 1867 he published his work on

“Treatment of Fractures of the Lower Extremity by the Use of the Anterior Suspensory Apparatus.” In this he claimed that his invention was applicable to all fractures of the thigh and leg. Other advantages pointed out were that it was cheap, light and readily procured and applied; that the flexed and relaxed position of the limb allowed it to settle down in its new bed, the fragments readily resuming their normal relations to one another; that it facilitated irrigation and dressing of wounds; that it exempted the heel and other parts from pressure; that it allowed change of position and movement of the body; that in the severest cases of compound and complicated fractures it allowed the patient to be conveyed to a distance without risk or pain. There has been much discussion as to whether the anterior splint produces extension or not; the inventor claimed that it did. Whether it does or not those who have had the good fortune to see the great master apply it will not question its value, whilst those who have experienced in their own persons its merits will not be willing to trust to any other. Its utility was especially shown during our Civil War and the Franco-Prussian War. Modifications of it have been proposed by several, of which those of Hodgen, of St. Louis; Simmons, of Hagerstown; Porter, of Lonaconing; O. J. Coskery, of Baltimore, and Palmer, of the United States Navy, may be especially mentioned. The first has had and still has a considerable vogue.

The most exhaustive study of the anterior splint that has been published was that of Dr. J. Edwin Michael, and to be found in the *Annals of Anatomy and Surgery*, for April, 1882. Dr. Michael was admirably adapted for such work by his judicial frame of mind and his opinions have great weight. He claims to have demonstrated that the splint cannot produce

MEDICAL AND CHIRURGICAL FACULTY

extension in its modern surgical sense, as claimed by the inventor, but that it is the best exposition of the "retentive" principle of treatment, and this retention or prevention of retraction due to the anterior application of the apparatus and the perfect adaptation of the bandage to the conformation of the limb, is much better in a great majority of cases than continuous extension. Dr. Michael concludes as follows: "It acts on well-recognized surgical and anatomical principles, is cheap, simple, easy of application, allows the patient considerable freedom of movement, gives perfect access to wounds in compound fracture without interference with the splint and is for the general run of cases the best apparatus for the treatment of fracture of the femur, whether it be simple or compound, and of compound fracture of the leg."

CHRISTOPHER JOHNSTON, M.D.

The subject of this memoir was of Scotch descent. His grandfather emigrated to Baltimore in 1766 and pursued here a mercantile career. His mother was Miss Elizabeth Gates, a daughter of Major Lemuel Gates, U. S. A. Inheriting the name of his father and grandfather, Dr. Johnston was born at Baltimore, September 27, 1822. On the death of his father in 1835 at Cincinnati, where the family had spent several years, he was adopted by his aunt, Miss Mariah S. Johnston, of Baltimore. He was educated at St. Mary's College, Cincinnati, and at the institution of the same name at Baltimore and then entered the office of Dr. John Bucker as a student of medicine. Part of his student life was spent at the Baltimore Almshouse which was a popular resort at that time for clinical training. He received the degree of M.D. at the University of Maryland in 1844. In the same year he visited Europe, traveling exten-

MEDICAL AND CHIRURGICAL FACULTY

sively. In 1847 he joined with Drs. Charles Frick, David Stewart and Elisha W. Theobald, in founding the Maryland Medical Institute, an excellent preparatory school of medicine, "organized to elevate the standard of office instruction in accordance with the design of the National Medical Convention." From 1853 to 1855 he was again in Europe studying in the hospitals of Paris and Vienna; he also traveled extensively in Spain. On his return in 1855 he became "Lecturer on Experimental Physiology and Microscopy" and Curator of the Museum at the University. His course filled a need there and was highly popular with the students, and the second year it became obligatory. In 1857 he gave up this post to take the Professorship of Anatomy at the Baltimore Dental College, where he remained until 1864. The battle of Gettysburg was, according to all accounts, the turning point in Dr. Johnston's medical career, the tide which is said to come to all of us at some time, and which rightly used "leads on to fortune." He volunteered his services after this battle and was on the field for some time rendering surgical aid to the Southern wounded. On his return to the city, the friends of the South residing at Baltimore presented him with a valuable testimonial and his fame and practice were both greatly augmented. On January 1, 1864, he received the appointment as Professor of Anatomy and Physiology in the University of Maryland. In 1866, by the division of his Chair, the title became General, Descriptive and Surgical Anatomy. In 1869 he became Professor of Surgery, succeeding Prof. N. R. Smith, and after holding this office for twelve years, retired as Emeritus Professor.

Dr. Johnston early manifested a strong taste for scientific studies and research, and this continued up to the last days of his life. Many indeed thought that his strength lay in this

direction rather than in practical medicine, and that had he followed his earlier inclinations he would have achieved a far greater fame. No one in the profession held so high rank as he in histology and pathology. He devoted himself with ardor to the study of these and acquired great expertness in the use of the microscope at a time when such knowledge was possessed by but few. Dr. William T. Howard has declared that he was the most variously accomplished medical man he ever knew. He possessed unusual skill as an artist and was thus enabled to illustrate his own articles and lectures with large drawings and water color pictures. "Some of his drawings, especially those of the brain and spinal cord, are of unsurpassed excellence" (Howard). He was a frequent contributor to scientific and medical literature and a list of his writings was given in 1879 in the "Catalogue of Scientific Papers," published by the Royal Society of England. His publications appeared in the *American Journal of the Medical Sciences*, the *Maryland Medical Journal*, the *British Journal of Dental Science*, *Silliman's Journal*, the *London Quarterly Journal of Microscopical Science*, the *Virginia Medical Monthly*, and the transactions of the Medical and Chirurgical Faculty, the American Medical Association and the International Medical Congress. Many of his papers were republished in other journals. His longest work was his treatise on "Plastic Surgery" in the "International Encyclopædia of Surgery" (Ashhurst), New York, 1881, i, 531-549. A French edition of this great work appeared in Paris in 1883. Including this treatise, I have been able to collect forty-one of his publications, extending from 1850 to 1889 inclusive; his greatest activity as an author was manifested in the first and last decades. One of his earliest papers, upon the "Auditory Apparatus of the Mosquito" attracted a good deal of

MEDICAL AND CHIRURGICAL FACULTY

attention on account of its laborious, careful and delicate work; it appeared in the *Quarterly Journal of Microscopical Science*, London, 1855. His paper on the "Microscopy of the Blood," presented to the International Medical Congress at Philadelphia in 1876, was devoted more particularly to a study of the red corpuscles and the differences in appearance distinguishing these in man and various other animals.

He was slow and careful in his operations, ingenious in devising and carrying out expedients, with great attention to detail and to final cosmetic effect. He took infinite pains with his cases, gave as much labor to the poorest and to those from whom he expected no recompense as to the rich. He was particularly successful in plastic work. He was the first in Maryland, in 1873, to perform complete extirpation of the upper jaw, and to operate for exstrophy of the bladder, which he did with success in 1876. The former operation was preceded by tracheotomy. He performed tracheotomy thirty-one times for various conditions with thirteen recoveries, and laryngotomy five times with uniform success (Browne, 1880). He performed close amputation of the penis for epithelioma with success.

The love of his profession was one of the most marked characteristics of Dr. Johnston's career. Jealous of the reputation and rights of his guild, he never shrank from any duty or responsibility. And so we find him taking part in organizing societies, stirring up the latent *esprit de corps* by his addresses and coöperating in all movements for the advancement of his profession. He was a founder of the Pathological and Clinical Societies and held the office of President in these and in the Medical Association, the Maryland Academy of Sciences, the Alumni Association of the University of Maryland and the

MEDICAL AND CHIRURGICAL FACULTY

Medical and Chirurgical Faculty. He was a member of the American Medical and Surgical Associations, and of the International Medical Congress held at Philadelphia in 1876, an Associate Fellow of the College of Physicians of Philadelphia, and a delegate from the Medical and Chirurgical Faculty to the International Medical Congresses held at London in 1881 and at Copenhagen in 1884. He was Consulting Surgeon to the Church Home and Infirmary, the Baltimore Hebrew Hospital and the Johns Hopkins Hospital.

Dr. Johnston's broad sympathies and scientific spirit impelled him to recognize and foster what was best whether at home or abroad. And so when the Johns Hopkins University was inaugurated here in 1876, it found no warmer adherent and well-wisher than he. He frequently visited its laboratories and museums and often brought on his return from European trips some additions to their collections. He was greatly interested in the optical properties of crystals and at the very time of being taken ill was engaged in investigating by crystal sections the character of an apophyllite sent him from California. By his will he bequeathed to the Johns Hopkins University his medical and surgical instruments, his cabinet of microscopical preparations, his cabinet of crystals prepared for optical purposes and his medical library which included a large number of anatomical illustrations prepared by himself for his lectures at the University of Maryland. He had previously given to the Biological Museum a set of fossil teeth of various animals and a number of casts of skulls of apes.

As he succeeded Dr. N. R. Smith in the Chair of Surgery at the University, so he succeeded to the professional standing which that great surgeon occupied here and from about 1870 to 1890 he was unquestionably the leader of the Baltimore profes-

MEDICAL AND CHIRURGICAL FACULTY

sion. As such the duty devolved upon him of receiving at his hospitable board the distinguished men from at home and abroad who visited this city. He there introduced to his friends many eminent men whom he had met in his travels. He was warmly attached to Edwin Booth, the actor, with whom he first became acquainted when called to attend him for a wound accidentally received in a fencing scene on the stage of the Holliday Street Theatre; also to the distinguished Maryland lawyers, Reverdy Johnson, I. Nevitt Steele and S. Teackle Wallis.

He visited Europe five times, on the last occasion, in the summer of 1886, traveling extensively through Russia, Norway and Sweden. On his return from this trip he wrote a very interesting description of his journey to North Cape and his observations then made.

Dr. Johnston's personal appearance was very striking and commanding. He was about six feet in height and had a graceful and erect carriage. His hands and feet were remarkably small. He had red hair which he parted in the middle and a full red beard. As he grew older the color of these changed to gray, giving him a very venerable appearance. He was neat, somewhat prim in his attire. His most striking feature, however, was his head which was large and of classical shape and well poised upon his broad shoulders. His forehead was broad and massive and betokened a superior intellect. While not a fluent speaker, he expressed himself in choice, precise and scientific terms. "He spoke the French and German languages," says Dr. William T. Howard, "with almost equal facility, and so well that in the opinion of competent judges he might have been readily mistaken for a native of either country."

MEDICAL AND CHIRURGICAL FACULTY

In contemplating Dr. Johnston's life, we are at once struck with his lofty character. In him we see combined the courteous gentleman, the erudite scholar, the cultivated man of taste, the dignified and skillful physician. In earlier years certain affectations together with an ill-concealed contempt of the claims of mediocrity and pretension and a certain hastiness of temper made him some enemies, but when the mellowing influence of time had brought self-control and had fully rounded out his character, his true nobility and greatness became manifest. He knew what was due to himself and to his profession and he had the courage to exact it. He was particularly noted for insisting upon adequate compensation for his professional services and for maintaining a due standard of rates, for which the younger generation of physicians felt particularly grateful to him. Professional honor and ethics found their truest exponent in him. He was strict and conscientious in meeting and discharging his duties and engagements and he never slighted or hurried through his work. He was always ready to respond to the calls of his brethren or the appeals of the poor, and "his presence in the sick room, with his kindness of heart, his polished courtesy of manner, his brightness of spirit, his ready wit, was as a sunbeam" (Miltenberger). His religion was of that sort whose depth is scarcely suspected by the superficial observer, who does not look below the exterior. The stillness of the surface was only due to the depth of the convictions which directed and controlled his life.

Dr. Johnston's ill-health was attributed by him to an attack of diphtheria contracted in performing an operation in 1884. He never fully recovered, but manifested increasing infirmity from this time on, and an impediment in his speech gave his friends much concern. The end came rather suddenly. On Friday

MEDICAL AND CHIRURGICAL FACULTY

evening, October 10, 1891, he complained of feeling unwell, and on the following morning, after getting up and coming downstairs, he was compelled to return to bed, where he suffered for some hours with indigestion and abdominal cramps. At two o'clock on Sunday morning he became unconscious and died at 11.15 A. M. In the death certificate "indigestion and colic" were assigned as the cause of death. His funeral took place from St. Paul's Church, of which he was an active member, and was attended by a great concourse of physicians and prominent citizens; his remains were interred at Loudon Park Cemetery.

Dr. Johnston married Miss Sallie C. Smith, the daughter of Benjamin Price Smith, of Washington, D. C.; she died a few years before him. He left four sons, the eldest bearing his name, being a member of the Faculty of Johns Hopkins University, and one daughter.

FRANCIS DONALDSON, M.D.

Dr. Donaldson was born in the city of Baltimore on the twenty-third of July, 1823. He was the fifth and youngest son of John Johnston Donaldson, Esq., President of the Franklin Bank and the Baltimore Insurance Company. He was educated at Dr. Prentiss' School, near Baltimore, but his father was unable to give him the advantages of a college education, a source of deep regret to himself. He began his medical studies September, 1842, as an office student of Dr. Samuel Chew and subsequently spent a year or more as interne at the Baltimore Almshouse, Dr. W. C. Van Bibber, who was his fellow student, has described him at this time in glowing terms. Duty, says he, was his watchword and ever uppermost in his mind. He was extraordinarily sensitive and shrinking. He was industri-

MEDICAL AND CHIRURGICAL FACULTY

ous, painstaking and progressive. All felt stimulated by his presence and example and his ardor and enthusiasm were contagious and irresistible. He was a leader among his young associates. The chief works then studied were those of Laennec, Louis, Trousseau, Swett, Stewardson, and Watson, and the reading of these was supplemented by the inspiring lessons of Elisha Bartlett, William Power and Thomas H. Buckler. "Happy days," exclaims Dr. Van Vibber, "of tireless trimming of the midnight lamp, mutual assistance and a perpetual search for truth."

Having graduated as Doctor of Medicine at the University of Maryland in 1846, he now visited Europe and in the Charity Hospital of Paris had the opportunity of following some of those great teachers whom he had already learned at Baltimore to admire and whom he never ceased to reverence. The revolt against empiricism and blood-letting had then gained the day and he embraced with ardor the new rational medicine.

On his return in 1848 he was appointed Resident Physician at the Marine Hospital. During his two years' service there, an epidemic of typhus fever occurred at the institution and he was the only physician connected with it who escaped the disease. In 1850 he entered upon private practice and from that time until almost the very end of his life he consecrated himself to his professional duties with entire devotion.

From 1852 to 1855 he was an Attending Physician to the Baltimore Almshouse, and from 1858 to 1863 Professor of *Materia Medica* at the Maryland College of Pharmacy, succeeding Dr. Charles Frick there. In 1866, by the division of Dr. Christopher Johnston's Chair, he received the appointment of Professor of Physiology, Hygiene and General Pathology, and Clinical Professor of Diseases of the Throat and Chest at

MEDICAL AND CHIRURGICAL FACULTY

the University of Maryland. In 1880 he resigned the didactic part of his Chair and in 1888 retired from teaching altogether.

Beginning his studies under the masterly guidance of William Power, Dr. Donaldson paid great attention while abroad to physical diagnosis and for many years he was *facile princeps* in diseases of the chest and throat at Baltimore. But although so eminent in this field, he did not confine himself to it; he had also a large general and consultation practice and during his office hours his office was thronged with patients.

In personal appearance, Dr. Donaldson was below the average height but compactly built. He was a man of active and energetic habits of mind and body and gave one, as has been truly said, the impression that he was always busy. His face was always cleanly shaven. Whilst his features were not handsome there was something very striking about them and one could not look upon his face without recognizing in it evidences of uncommon intelligence and ability. He had a peculiarly bright expression and winning smile and his manners were charming. He was of a sensitive and retiring disposition and very considerate of the feelings of others. He was an enthusiastic student and teacher and had the happy faculty of communicating his enthusiasm to others. Under the magic of his voice and earnest manner, the driest subjects acquired a fresh interest. A favorite expression of his when he wished to impress a fact or statement particularly upon his audience (as all his students will recall) was, "Gentlemen, stick a pin there!" He was particularly happy, and in his element in the clinics. Few men have secured such a deep hold on the hearts of their patients and a visit from him was worth more than medicine. In all his relations, both professional and lay, he was courteous, courageous, conscientious, pure-minded and public-spirited, an

MEDICAL AND CHIRURGICAL FACULTY

ideal physician and an ornament to his profession and city. He took a deep interest in all measures and enterprises for the advancement of his fellow-man, and he was a warm friend and a generous contributor to our library. He was deeply but not obtrusively pious and a consistent member and communicant of the Protestant Episcopal Church. He was especially interested in medical education and at the very beginning of his connection with the Faculty of the University of Maryland, he urged the adoption there of the three-year course and other advanced methods which his colleagues, however, at that time and under the circumstances deemed impracticable.

As an author he enjoyed an extensive reputation for he wrote with studious care and always upon subjects with which he had familiarized himself by long study or practical experience. His first article appeared in the *American Journal of the Medical Sciences* for 1851 and was upon "Claude Bernard's Recent Discoveries in Physiology." In 1853 he published in the same journal an article, entitled "The Practical Application of the Microscope to the Diagnosis of Cancer," with plates. This paper was incorporated almost entire into the "Pathological Anatomy" of Jones and Sieveking. He thought at this time that he had discovered the specific cancer cell; he afterwards frankly acknowledged that he had been mistaken. The period of his greatest activity as an author was from 1866 to 1888. The writer has a list of twenty-three of his papers and addresses covering a wide range of subjects relating to physiology, histology, hygiene, materia medica, and affections of the chest and throat. He is the author of a fine memoir of Dr. Charles Frick in Gross' "Lives of Eminent American Physicians and Surgeons of the Nineteenth Century," 1861, and of an article on "Diseases of the Pleura" in Pepper's "System of Medicine," vol. iii, pp. 483-601.

MEDICAL AND CHIRURGICAL FACULTY

Besides the positions already named, he held those of Secretary of this Faculty for four years; of Attending Physician to the Baltimore General Dispensary for two years; of Attending Physician to the Church Home and Infirmary for thirteen years; of President of the Alumni Association of the University of Maryland, the Medical and Chirurgical Faculty and the American Climatological Association, and of Consulting Physician to the Johns Hopkins Hospital. He was for many years Examining Physician to the New York Mutual and other life insurance companies. He was also a member of the American Medical Association, the American Laryngological Association and various local societies, and Associate Fellow of the College of Physicians of Philadelphia.

Hardly had his friend, Dr. Christopher Johnston, been laid away when Dr. Donaldson claimed a like service from his friends. It was a singular coincidence that these two, born in the same city within a year of each other, commencing their careers about the same time, graduates and professors of the same school, both trained in the hospitals of Paris, living within a few doors of each other, moving along side by side, holding membership and office in the same societies, and each achieving the highest eminence in his chosen field, should pass away within the period of less than two months. One of the last appearances in public of Dr. Donaldson was at the memorial meeting held to do honor to his life-long friend and associate. It was a deeply impressive scene, witnessing his faltering attempt to speak and seeing him overcome with emotion. Looking back upon it, one cannot help thinking that he had then in his mind some premonition of his own early departure.

He had not been well since an attack of the grippe, from which he suffered in the winter of 1890-91. It was noticed

FRANK DONALDSON

1823-1891

MEDICAL AND CHIRURGICAL FACULTY

that he was short of breath, and that he attended to his professional duties with difficulty. He spent the summer at the Isle-of-Shoals, but was not benefited. Symptoms of Bright's Disease appeared. For some weeks prior to his death he was confined to his house with this affection, which terminated his life on the ninth of December, 1891, at one A. M. The immediate cause of decease was heart failure. The cause of death assigned in the death certificate was "fatty heart and albuminuria." He was buried two days later from St. Paul's Church, of which he was a member.

Dr. Donaldson married Miss Elizabeth Winchester, the daughter of William Winchester, of Baltimore, besides whom he left three daughters and two sons. His oldest son bears his name and also follows his profession.

ERRATA, ADDITIONS, ETC.

- Page 71, lines 10 and 18, "Nov. 1815" should be "Nov. 1816."
Page 98, line 8, "and" should be "to."
Page 104, line 1, "imperative" should be "inoperative."
Page 111, line 3, "have" should be "leave."
Page 125, line 17, "M. D. Baer" should be "M. S. Baer."
Page 167, line 7, "Gustave" should be "Gustav."
Page 182, line 16, "consulations" should be "consultations."
Page 194, line 14, "patent" should be "potent."
Page 242, line 2, omit comma after "state."
Page 255, line 18, "Humrickhouse" should be "Humrichouse."
Page 256, line 1, "ater" should be "after."
Page 269, line 31, "Harman" should be "Herman."
Page 273, line 32, "homonomous" should be "homonymous."
Page 297, line 8, after "Assistant" insert comma.
Page 297, line 13, "1812" should be "1892."
Page 298, line 1, "Rehohoth" should be "Rehoboth."
Page 302, line 17, "plan" and "duty" should be "plain" and "daily."
Page 311, under "Baltzell, John" add "Died Sept. 7, 1854, aged 79."
Under "Baltzell, Wm. H.," the "H." is for "Henry." After "Born," etc., add "July 31, 1833; son of Dr. John Baltzell."
Page 320, under "Beucke, J. A." add "Died near Catonsville, Md., October 14, 1858."
Page 321, under "Billingslea, M. B." add "Died at Baltimore, Dec. 8, 1902."
Page 325, line 4, "1882-94" should be "1882 and 1894."
Page 332, under "Brewer, Marbury" add "Died at Baltimore, Jan. 24, 1903."
Page 339, under "Buffington, J. A." after "began practice," etc., "1895" should be "1885." Also add "Died at New Windsor, Carroll Co. Md., Oct. 17, 1902."
Page 342, under "Canfield, W. B." after "Lecturer on Clinical Medicine, University of Maryland," change comma to semi-colon.
Page 358, "Colburn" should probably be "Coulbourn."
Page 362, line 14, "1902" should be "1903."

ERRATA, ADDITIONS, ETC.

Page 363, under "Councell, T. A." add "Died at Baltimore, Feb. 18, 1903."

Page 363, under Councilman, W. T." after "1885," insert "Honorary, 1898."

Page 364, before "Cox, C. C." place a star.

Page 366, under "Crim, W. H." add "Died at Baltimore, Nov. 15, 1902."

Page 367, under "Crothers, R. R." add "until his death, Nov. 8, 1902."

Page 379, under "Donaldson, F." after "Pharmacy," change "1863-66" to "1858-63."

Page 380, line 5, "Stuart" should be "Steuart."

Page 380, under "Dorsey, John W.," prefix star.

Page 382, under "Downey, J. W." "chirurgical" should be "chirurgical."

Page 385, line 1, "accoucher" should be "accoucheur."

Page 390, under "Elliott, J. B." prefix star.

Page 402, after "Friedenwald, A." change "1875" to "about 1870."

Page 408, last line, after "Honor" insert period.

Page 409, under "Gibson, J. G." at end of first line, change period to comma.

Page 412, "Munich," line 3, should be "Münich."

Page 414, under "Goldsmith, R. H." add "Died at Baltimore, Jan. 13, 1903."

Page 418, under "Griffith, R. E." prefix star.

Page 421, under "Hackett J. C." add "Died at Millington, Jan. 21, 1903."

Page 422, under "Hall, Jacob" the answer to the question propounded is 'no;' the Edinburgh "Hall" was "James."

Page 425, under "Hammett, S. B." prefix star.

Page 432, under "Hartwig, C. W." at end of line 4, for "1899" put "1898."

Page 434, under "Hebb, T. W." prefix star.
